Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	909095-1	on 12/24/2020 the resident was sleepy and stayed in bed most of the shift. He stated he was doing okay but requested pain medication for his legs at 250PM. At 255AM on 12/25/2020 the resident was observed in bed lying still, pale, eyes half open and foam coming from mouth and unresponsive. He was not breathing and with no pulse	End stage renal disease with dependence on renal dialysis, COPD, cirrhosis of the liver, hypokalemia, gout, heart failure, hyperlipidemia, atrial fibrillation.	Tamsulosin 0.4mg, Lactobacillus tablet, Nephro-vite tablet 0.8mg, Allopurinol 100mg, ferrous gluconate 324mg, melatonin 6mg, lisinopril 2.5mg, colace 100mg, metacucil powder, aspirin 81mg, amidoarone 200mg, hydroxyzine 25mg, cholestyramine
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	910363-1	Patient had mild hypotension, decreased oral intake, somnolence starting 3 days after vaccination and death 5 days after administration. He did have advanced dementia and was hospice eligible based on history of aspiration pneumonia.	dementia declining oral intake	risperidone daily doxazosin
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	913733-1	My grandmother died a few hours after receiving the moderna covid vaccine booster 1. While I don't expect that the events are related, the treating hospital did not acknowledge this and I wanted to be sure a report was made.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	914621-1	Resident in our long term care facility who received first dose of Moderna COVID-19 Vaccine on 12/22/2020, only documented side effect was mild fatigue after receiving. She passed away on 12/27/2020 of natural causes per report. Has previously been in & out of hospice care, resided in nursing home for 9+ years, elderly with dementia. Due to proximity of vaccination we felt we should report the death, even though it is not believed to be related.	None	No other medications for this event.
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	915880-1	Patient died within 12 hours of receiving the vaccine.	Refused food for one week prior to death.	Refused anything PO for about one week prior to death.
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	917117-1	After vaccination, patient tested positive for COVID-19. Patient was very ill and had numerous chronic health issues prior to vaccination. Facility had a number of patients who had already tested positive for COVID-19. Vaccination continued in an effort to prevent this patient from contracting the virus or to mitigate his risk. This was unsuccessful and patient died.	Yes	Quietapine, Mirtazapine, Hydrocodone, Fentanyl
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	917790-1	At the time of vaccination, there was an outbreak of residents who had already tested positive for COVID 19 at the nursing home where patient was a resident. About a week later, patient tested positive for COVID 19. She had a number of chronic, underlying health conditions. The vaccine did not have enough time to prevent COVID 19. There is no evidence that the vaccination caused patient's death. It simply didn't have time to save her life.	Patient was a resident of a long term care facility and had numerous chronic conditions prior to vaccination.	Torsemide, Trazadone, Amitizide, Morphine Sulfate, Fentanyl, Carbidopa-Levodopa, Prednisone, Potassium Chloride, Escitalopram, Incruse Ellipta, Mirtazapine, Clonazepam, Levothyroxine
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	917793-1	Prior to the administration of the COVID 19 vaccine, the nursing home had an outbreak of COVID-19. Patient was vaccinated and about a week later she tested positive for COVID-19. She had underlying thyroid and diabetes disease. She died as a result of COVID-19 and her underlying health conditions and not as a result of the vaccine.	Diabetes, Thyroid disease	Metoprolol-Tartrate, Latanoprost, Glipizide, Pravastatin, Metformin, Benaprezil, Potassium-Chloride, Levothyroxine
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	918065-1	1/1/2020: Residents was found unresponsive. Pronounced deceased at 6:02pm	- covid-19	- Invega Trenz 546mg Q3months - Lithium 300mg BID - Oxybutynin 5mg QID - lipitor 20mg QHS - cogentin 2mg BID - Norvasc 5mg QD - Dyazide Capsule 37.5-25 MG (Triamterene-HCTZ) QD
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	918487-1	Two days post vaccine patient went into cardiac arrest and passed away.	NSTEMI, Dementia, TIA, COVID-19, HTN, CVA, PVD	Loratadine, Plavix, flomax, Lisinopril, atrovastatin, amlodipine, Pentoxifylline, ASA, Donepezil, trazodone, Metoprolol tartrate.
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	918518-1	syncopal episode - arrested - CPR - death	To be determined	To be determined
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	919537-1	Resident exhibited no adverse events during 30 minute monitoring following vaccine administration. Resident found without pulse at 1900.	Resident had suspected vasovagal episode with drop in O2 saturation.	Robitussin Cough+Chest Cong DM Liquid 5-100 MG/5ML (Dextromethorphan-guaiFENesin) Tylenol Extra Strength Tablet (Acetaminophen) amlODIPine Besylate Tablet 5 MG Morphine Solu Tab 2.5MG Capsaicin Cream 0.025 % Leflunomide Tablet 10 MG Levothy
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	920326-1	Redness and warmth with edema to right side of neck and under chin. Resident was on Hospice services and expired on 1.1.21	G30.1 Alzheimer's disease with late onset (Primary) M19.90 Unspecified osteoarthritis, unspecified site J44.9 Chronic obstructive pulmonary disease, unspecified I95.1 Orthostatic hypotension J45.909 Unspecified asthma, uncomplicated R13.12 Dysphagia, oropharyngeal phase M15.0 Primary generalized (osteo)arthritis M85.80 Other specified disorders of bone density and structure, unspecified site Note: Osteopenia J30.9 Allergic rhinitis, unspecified F41.1 Generalized anxiety disorder M24.511 Contracture, right shoulder M24.512 Contracture, left shoulder M24.521 Contracture, right elbow R29.3 Abnormal posture M17.4 Other bilateral secondary osteoarthritis of knee M25.561 Pain in right knee R26.89 Other abnormalities of gait and mob	Cetirizine, Lactaid

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	920368-1	12/30/2020 07:02 AM Resident noted to have some redness in face and respiration were fast. Resident vital signs were abnormal except blood pressure. Temp at the time was 102.0 F taken temporal. Resident respirations were 22 labored at times. Pulse is 105 and pulse ox 94% on room air. Resident is made comfortable in bed. Notified triage of change in condition also made triage aware of resident receiving Covid vaccination yesterday morning. Resident appetite and fluid consumption has been poor for few days. 12/30/2020 07:32 AM Received order from agency to administer Acetaminophen 650mg suppos rectally due to resident not wanting to swallow anything including fluids, medications and food. This writer administered medication as NP ordered. Will monitor for effectiveness and adverse effects if any. 12/30/2020 08:41 AM Received new orders to obtain Flu swab, obtain CBC and BMP, and Chest Xray all to be obtained today. Notified family of resident having temperature and vital signs excluding b/p that was abnormal. Family was thankful for call and inierated to nurse that family does not want resident sent to hospital. Did educate family on benefits of Hospice services, but family persistant on continued daily care provided by nursing staff. Requests visits if decline continues. Family assured if resident continues to decline, facility will accomadate resident family to be able to be at bedside when time comes to do so. NP ordered IVF and IV Levaquin on 12/31/20. Family chose at that time to sign for Hospice services and not have resident provided with IVF or IV Antibiotics	F03.90 Unspecified dementia without behavioral disturbance E78.5 Hyperlipidemia, unspecified K21.9 Gastro-esophageal reflux disease without esophagitis I10 Essential (primary) hypertension Z74.09 Other reduced mobility M62.81 Muscle weakness (generalized) R13.12 Dysphagia, oropharyngeal phase R26.81 Unsteadiness on feet R27.8 Other lack of coordination R41.841 Cognitive communication deficit R54 Age-related physical debility D53.9 Nutritional anemia, unspecified R29.6 Repeated falls M13.80 Other specified arthritis, unspecified site M25.512 Pain in left shoulder M19.012 Primary osteoarthritis, left shoulder K59.09 Other constipation R26.89 Other abnormalities of gait and mobility R63.8 Other symptoms and signs concerning f	Acetaminophen, Atenolol, Colace, Lisinopril, Mirtazapine, Omeprazole, Simvastatin, Vitamin D3
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	920815-1	Found deceased in her home, unknown cause, 6 days after vaccine.	unknown	unknown
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	921547-1	DEATH ON 1/4/2021, RESIDENT RECIEVED VACCINE ON 1/2/20	CEREBRAL INFARCTION, UNSPECIFIED(I63.9), LONG TERM (CURRENT) USE OF ASPIRIN(Z79.82), VITAMIN DEFICIENCY, UNSPECIFIED(E56.9), ACUTE KIDNEY FAILURE, UNSPECIFIED(N17.9), HYPERKALEMIA(E87.5), ACUTE RESPIRATORY FAILURE, UNSPECIFIED WHETHER WITH HYPOXIA OR HYPERCAPNIA(J96.00), PURE HYPERCHOLESTEROLEMIA, UNSPECIFIED(E78.00), PAIN IN RIGHT FOOT(M79.671), ESSENTIAL (PRIMARY) HYPERTENSION(I10), ACIDOSIS(E87.2), ABNORMAL LEVELS OF OTHER SERUM ENZYMES(R74.8), HYPERLIPIDEMIA, UNSPECIFIED(E78.5), DISORDER OF THYROID, UNSPECIFIED(E07.9), GASTRO-ESOPHAGEAL REFLUX DISEASE WITHOUT ESOPHAGITIS(K21.9), MUSCLE WASTING AND ATROPHY, NOT ELSEWHERE CLASSIFIED, UNSPECIFIED SITE(M62.50), MUSCLE WASTING AND ATROPHY, NOT ELSEWHERE CLASSIFIED, MULTIPLE SITES(M62.59), CO	Acetaminophen Tablet 325 MG Give 2 tablet by mouth every 6 hours as needed for Pain. elevated Temp. COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	921572-1	Resident had body aches, a low O2 sat and had chills starting on 12/30/20. He had stated that they had slightly improved. On 1/1/21 he sustained a fall with a diagnosis of a displaced hip fracture. On 1/2/21 during the NOC shift his O2 sat dropped again. He later went unresponsive and passed away.	Heart Failure	Fluticasone, Lasix, Omeprazole, Sucrafate, Ropinrole HCl
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	922977-1	Fever, RespDepression & COVID positive REMDESIVIR (EUA) 200 mg x1 then 100 mg daily	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	923993-1	Patient was vaccinated Dec 30, 2020. Prime dose of Moderna vaccine. Observed for full 15 minutes post-injection. No complaints when asked during observation. Released. Subsequently, vaccine clinic staff learned from the patient's supervisor that on Jan 4, 2021 that the patient had expired on Jan 2, 2021. By report from the supervisor, the patient was found dead at his home. The patient's primary care provider was unaware of his death when contacted by this reporter today (Jan 6, 2021). Electronic Medical Record without any information since the vaccination.	No	Unknown
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	924126-1	resident expired 1/1/2021	Low blood pressure requiring medication changes. Sent to ER on 1/1 with low b/p sent back same day, heart failure. Family requests comfort measures only.	Singulair, loproress, pepcid, omeprazole, lasix, albuterol, azelastine eye gtrs, calcium, eliquis, prozac, terazosin, magnesium oxide, potassium
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	924186-1	Resident expired 1/3/21	Covid positive previous with no s/s poor appetite Chronic wound right leg	aldactone, lasix, aspirin, tylenol, potassium, spiriva
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	924664-1	At approximately, 1855, I was alerted by caregiver, resident was not responding. Per caregiver, she was doing her rounds and found resident in bed, unresponsive, mouth open, observed gurgling noises and tongue hanging out of mouth. This primary caregiver observed resident at baseline and ambulating after dinner at approximately, 1800 less than an hour prior to incident. This PCG called 911 for EMS and gave report of incident. Resident was taken to Medical Center Emergency Department. At ER, CT scan and X-ray was performed. Per report from ER RN, CT scan and x-ray revealed an intracranial aneurysm and fluid in the lungs. Per RN, resident was still unresponsive and was admitted to Medical Center for observation and comfort measures. This primary caregiver reported to RN, resident recently received the first dose of COVID-19 vaccine on 1/2/21. Primary caregiver received a call from Castle RN at 0700, resident expired at 0615.	none	Metoprolol succ ER 50mg 1 tab PO daily Omeprazole DR 20mg 1 cap PO daily Amlodipine besylate 5mg 1 tab PO daily Aspirin 81mg 1 tab PO daily Carbamazepine ER 100mg 1 tab PO TID Docusate 100mg 1 cap PO daily Multivitamin 1 tab PO daily Olmesa
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	925154-1	Deceased	NONE	Avorstatin Aspirin Oxycodone
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	925264-1	PT was found deceased in his home on 1/5/2021	CHF HTN DM 2 CKD Obesity DDD	Norco 5/325 1 tablet every 6 hours as needed. Warfarin 4mg , 2 tablets orally Monday and Friday Torsemide 100mg, 1/2 tablet orally once a day Sabcutitriil-Valsartan 24/26mg 1/4 tablet orally twice a day Gabapentin 300mg, tablet once daily Ca

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	926600-1	Patient did not report any signs or symptoms of adverse reaction to vaccine. Patient suffered from several comorbidities (diabetes and renal insufficiency). Patient reported not feeling well 01/06/2021 and passed away that day.	Diabetes, renal insufficiency	Unknown
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Death	926797-1	had a vaccination on 12/31/2020 late morning passed away early morning 01/01/2020. This is a 93 year old with significant heart issues. EF of 20% among other comorbidities. He died suddenly approximately 0430, it is unlikely it was related to receiving the vaccine.	This is a 93 year old with significant heart issues?EF of 20% among other comorbidities. He died suddenly approximately 0430, it is unlikely it was related to receiving the vaccine	No other medications for this event.
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Life Threatening	907075-1	Patient experienced bronchospasm with coughing and tongue itching approximately 10 minutes after the injection.	no	Prescription: atenolol, omeprazole, simvastatin, primidone, levothyroxine, escitalopram, albuterol inhaler
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Life Threatening	909061-1	Reported sensation of tongue swelling during post-vaccination observation at 10 minutes. Epinephrine was refused and she was taken to ED for observation where she was given oral dose of Benadryl and Pepcid. Discharged with instructions to return PRN and follow up with PCP. Elevated BP noted.	No current illness for this event.	Lipitor, Maxide-25, Cymbalta, ASA
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Life Threatening	909481-1	O had the vaccine at 9 am this morning waited 15 mins after vaccine before leaving while driving I had a pounding heart rate and hot I rolled down the window felt better. 1 hour later while at home.e started with nausea diarrhea rapid heart rate headed to medical office while in care tongue swelled I called 911 pulled over when the ambulance got to me my throat swelled and I had hives on chest they took me emergency while there I had sever pounding heart and vomiting treated with meds sent home with medication and benadryl	None	None
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Life Threatening	912511-1	Received vaccine at 1:30 pm yesterday, noted onset of symptoms at 8:45 pm. Numbness and tingling to mouth and bilateral upper and lower extremities, mild vision change, feeling of some swelling to bilateral eyelids. Also swelling to lips. She also did take zinc gluconate 50 mg last night and this morning. Has never taken zinc 50 mg, but has taken zinc as component of multivitamin/pre-natal vitamins. Patient was prescribed Pepcid 20 mg BID, Medrol 4 mg dose pack 21 pill taper until complete. Also given Benadryl 25 mg - 50 mg every 4 - 6 hours for allergy symptoms. And provided with an Epi-Pen for home.	None	Zinc 50 mg daily Vitamin D3 5000 IU daily Trazodone 50 mg daily Melatonin 5 mg daily
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Life Threatening	912930-1	"Patient was monitored for >15 minutes after vaccination. Patient told a nurse that her knees felt weak. Patient then fainted and was laying on the floor when i arrived. Patient reported she felt like she was ""floating"" and she did not want to ""fall"". She was also nausea and wanted to vomit and did not end up vomiting anything up. Patient fainted several more times. Her BP was around 143/80 and unsure about the pulse. Patient then become unresponsive for 20-30 seconds."	Migraines	Unknown
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Life Threatening	914309-1	Within 3 minutes of vaccination patient became fully flushed head and neck, with rapid heart rate (112), and feeling like her airways were tightening-. Nurse immediately called for response, administered Epipen, when response arrived applied oxygen and transported to ED. Solumedrol 125 mg, Benadryl 25 mg, and Famotidine 20 mg, she responded well and was released home with Rx Prednisone 40 mg x 3 days. Only residual effect was a dry/sore throat.	None	Excedrin Migraine at 9:00 PM on 12/28/2020
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Life Threatening	914392-1	12/30 9:30 am developed angioedema. Swelling of face, lips, tight throat. Also had bright red rash over body trunk and arms. Both palms were red, hot and painful.	Was covid negative 12/23. Tested covid positive 12/26. No symptoms of covid. (Husband has work exposure and had tested positive 12/23) we have quarantined since 12/23	Metformin, lisinopril, HCTZ, zeta, atorvastatin, KCL, baby aspirin, vitamin D, melatonin, B12, Nexium, vitamin E, ceterizine
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Life Threatening	914821-1	Rash, Itching and swelling of left arm. Progressed to tachycardia in the 150's, hypertension 200/114. Tingling of lips, dizziness	None	None
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Life Threatening	915199-1	Itchy throat, red eyes after 30 minutes. EMS on site gave IV Benadryl, epi pen shot and took to ER for monitoring. Vitals were good so he was discharged.	None	Lialda for colitis
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Life Threatening	916538-1	"15-20 mins after receiving the vaccine she reported she had difficulty swallowing and difficulty breathing and was ?shaking."" a PA wrote in her note that when she ran in to help, she found the patient to be tachypneic, diaphoretic, warm with some red blotchy patches on face, chest & neck. Able to speak easily c/o trouble breathing & sensation of throat swelling & extremities feeling abnormal. No stridor. No facial edema noted by that clinician. Administered epi-pen 0.3mg - IV started, Benadryl 50mg IVP and solumedrol 125mg IVP. Patient reports she subsequently arched her back and had rigidity of her arms/legs and tremors. Clinic PA reports that while she was there, pt was never hypotensive. Initially hypertensive after epi as expected with some favorable response after 10-15 min Staff there gave her IM epinephrine, IV Solo-Medrol and 50 mg IV Benadryl. EMS was contacted and transported to the emergency room. She arrived at the ER, was monitored for 2 hours, was started on pepcid and benadryl and discharged from the ER. She had a diffuse itchy rash. The following day she again developed recurrence of throat swelling. Went back to a different ER. Developed dyspnea immediately prior to arrival at ER. There was again given solumedrol and benadryl and pepcid and developed muscle rigidity and arched back for 10 minutes. Symptoms of SOB and dyspnea resolved with epinephrine. Was discharged from the ER with prednisone after being monitored for 5 hours. Is continuing to take prednisone and benadryl. Rash is still present but improving with scheduled benadryl. Has new redness at injection site today. Continues to feel some throat swelling but no tightness today. This information was gathered from talking with pt today for a phone appt and also from her medical chart regarding her vaccination visit and two ER visits."	Did have nasal congestion in November briefly and then again in early December. Did get covid tests each time which were negative. Was feeling fine at the time of her vaccine.	iron 65 mg BID, super B-complex once daily, flax seed oil 1,000 mg daily, vitamin C 500 mg BID, vitamin D3 2,000 IU daily, Zyrtec 10 mg daily for nasal congestion seasonal allergies acyclovir, buspirone, Wellbutrin, hydroxyzine 10 mg prn a
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Life Threatening	916746-1	Anaphylaxis. Immediately experienced shortness of breath, rapid heart rate, and rash. I am a Nurse Practitioner in the emergency department. Had went down to the temporary vaccine station to receive my vaccine, immediately returned to the ER and began to experience symptoms of anaphylaxis. Was immediately placed in a treatment room and received treatment by the ER physician, which included oxygen, intravenous Benadryl, Solumedrol, and Normal Saline. Was observed for several hours and then eventually sent home with prescription for Prednisone and Pepcid. I do have a allergy to shellfish, was never asked about my allergies and nothing on the paperwork I was given prior to the injection noted a concern for shellfish allergies.	None	None

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Life Threatening	916859-1	The vaccine was received at 1:12 PM, and I felt fairly fine, aside from injection site pain and some tingling in my left arm until I had sudden significant elevation of heart rate, with shortness of breath, and throat swelling/tightening at approximately 1:26PM. I cold compress was applied to my forehead and I was put in a reclining position & then received Epinephrine at 1:28PM. EMS (present onsite) arrived for transport at 1:31PM. 4L of oxygen was applied after O2 sat of 89% noted by EMS. Blood pressure was elevated to >200/100 initially by EMS. Symptoms improved quickly following epinephrine, with some residual feelings of very mild throat fullness, and I developed chills which improved over time. I was transported to emergency department where I was evaluated (symptoms mostly resolved at that time, but ED physician noted a little swelling remaining in my uvula), then IV Benadryl and Decadron were given. Later acetaminophen was also given for headache that developed during my ED stay. My vitals were monitored throughout and observation occurred until I was discharged at approximately 5:00PM, as symptoms had not recurred.	None	felexofenadine, famotidine, hydroxychloroquine,
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Life Threatening	918839-1	Gallbladder removed, septic, 11mm axillary lymph node.	Unknown	Unknown
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Life Threatening	920787-1	2 minutes after vaccine was administered, noticed swelling back of tongue, progressed to posterior 2/3 of tongue, tachycardia, elevated BP. Progressive angioedema involving larynx, cough, shortness of breath. No wheezing. Physical exam did show any obvious swelling. O2 sat decreased to 80, 1st epinephrine IM administered, 50mg benadryl IV and Famotidine administered. some improvement in symptoms. In 30mins, reoccurrence of angioedema and second epinephrine vaccine administered. Monitored for 2 hours without reoccurrence of symptoms and discharged from ER.	none	Bupropion 300mg Vtr D3 2000IU B complex Claritin Fionase nasal spray Levonobunolol eye drops
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Life Threatening	922264-1	Immediate warm rush to my head and body. Heart was beating out of my chest and difficulty breathing. Heart rate spiked to 150 (normal around 55). Hand, legs, and mouth started to go numb. Eventually settled down after about 1 hr. Have not felt normal since which has been 3 days.	None	None
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Life Threatening	922279-1	Patient presented to receive COVID-19 vaccine, received vaccine at approximately 10 am. Patient waited 15 minutes for observation and left observation area without complaining of any sx. Patient returned a few minutes after reporting tongue tingling which eventually got to her lips. . No difficulty breathing or any other sx. No history of allergies. NP/RN administered PO Benadryl 25 mg. As of report of this iReport no additional symptoms or intervention needed. Last vitals: 131/83 75spo2. BP higher than usual per patient, spo2 normal.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Permanent Disability	911854-1	I received the vaccine shot on 12/23/20 at 3 pm. By 12/24/20, I had pain in my left arm that radiated to my neck and back on the left side. Over the past 4/5 days, I continue to have pain in my left arm, back and neck	High blood pressure, cholesterol	Losarten, pravastan, B-12
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Permanent Disability	914137-1	decreased range of motion in vaccinated arm: unable to raise left arm above shoulder x 72 hours now due to pain, no associated numbness or swelling. I am a surgeon and this impacts my work and driving. I would not have been able to operate during these last 3 days and while the pain is better 72hrs later, my arm is still out of commission. I think we need to inform healthcare providers who perform procedures that they may want to schedule the vaccine when no planned procedures for at least 72 hrs. Due to this issue I will be unable to proceed with the second dose, unless I can take it a week later than the scheduled January 24, 2021. It is taking too long to regain full function of the arm but I expect it will be back to normal as it is better today 72 hrs later.	none	minasterin oral contraceptive
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Permanent Disability	914473-1	Weakness, fatigue, decreased appetite, upper extremity shaking, sternal red blotchy rash, decreased mental status, non-verbal, decreased level of conscious, mottling, left side facial droop, hypertensive, fever, unable to follow commands	COVID-19 positive	Eliquis, carbidopa-levodopa, Cardizem, Comtan, gabapentin, metoprolol, omeprazole, potassium citrate
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Permanent Disability	919022-1	Complete loss of vision in the left eye 12 hours after receiving second dose (Moderna mRNA-1273) while having a fever of 102 F for 6 hours. Loss of vision lasted for 1 minute. Loss of vision occurred while standing. Referral to primary care and ophthalmology specialist found normal eye exam and MRI of orbits but presence of tachycardia (espically) while standing (fluctuations between 60 beats at rest/laying down to 130 beats per minute standing). Postural tachycardia syndrome (POTS) is suspected. Currently pursuing cardiac workup with cardiologist and Covid POTS specialist. POTS specialist believes autoantibody development after vaccination could be suspected as recovering covid patients similarly present to clinic with POTS like symptoms.	No current illness for this event.	Dutastride 0.5 mg/day, Wellbutrin XL 300 mg/day, Truvada (emtricitabine 200 mg and tenofovir disoproxil fumarate 300 mg)/day.

COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Emergency Room *	914821-1	Rash, Itching and swelling of left arm. Progressed to tachycardia in the 150's, hypertension 200/114. Tingling of lips, dizziness	None	None
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Emergency Room *	915199-1	Itchy throat, red eyes after 30 minutes. EMS on site gave IV Benadryl, epi pen shot and took to ER for monitoring. Vitals were good so he was discharged.	None	Lialda for colitis
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Emergency Room *	916538-1	"15-20 mins after receiving the vaccine she reported she had difficulty swallowing and difficulty breathing and was ?shaking."" a PA wrote in her note that when she ran in to help, she found the patient to be tachypneic, diaphoretic, warm with some red blotchy patches on face, chest & neck. Able to speak easily c/o trouble breathing & sensation of throat swelling & extremities feeling abnormal. No stridor. No facial edema noted by that clinician. Administered epi-pen 0.3mg - IV started , Benadryl 50mg IVP and solumedrol 125mg IVP. Patient reports she subsequently arched her back and had rigidity of her arms/legs and tremors. Clinic PA reports that while she was there, pt was never hypotensive. Initially hypertensive after epi as expected with some favorable response after 10-15 min Staff there gave her IM epinephrine, IV Solu-Medrol and 50 mg IV Benadryl. EMS was contacted and transported to the emergency room. She arrived at the ER, was monitored for 2 hours, was started on pepcid and benadryl and discharged from the ER. She had a diffuse itchy rash. The following day she again developed recurrence of throat swelling. Went back to a different ER. Developed dyspnea immediately prior to arrival at ER. There was again given solumedrol and benadryl and pepcid and developed muscle rigidity and arched back for 10 minutes. Symptoms of SOB and dyspnea resolved with epinephrine. Was discharged from the ER with prednisone after being monitored for 5 hours. Is continuing to take prednisone and benadryl. Rash is still present but improving with scheduled benadryl. Has new redness at injection site today. Continues to feel some throat swelling but no tightness today. This information was gathered from talking with pt today for a phone appt and also from her medical chart regarding her vaccination visit and two ER visits."	Did have nasal congestion in November briefly and then again in early December. Did get covid tests each time which were negative. Was feeling fine at the time of her vaccine.	iron 65 mg BID, super B-complex once daily, flax seed oil 1,000 mg daily, vitamin C 500 mg BID, vitamin D3 2,000 IU daily, Zyrtec 10 mg daily for nasal congestion seasonal allergies acyclovir, buspirone, Wellbutrin, hydroxyzine 10 mg prn a
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Emergency Room *	916746-1	Anaphylaxis. Immediately experienced shortness of breath, rapid heart rate, and rash. I am a Nurse Practitioner in the emergency department. Had went down to the temporary vaccine station to receive my vaccine, immediately returned to the ER and began to experience symptoms of anaphylaxis. Was immediately placed in a treatment room and received treatment by the ER physician, which included oxygen, intravenous Benadryl, Solumedrol, and Normal Saline. Was observed for several hours and then eventually sent home with prescription for Prednisone and Pepcid. I do have a allergy to shellfish, was never asked about my allergies and nothing on the paperwork I was given prior to the injection noted a concern for shellfish allergies.	None	None
COVID19 (COVID19 (MODERNA)) (1201)	Yes	None	Emergency Room *	916859-1	The vaccine was received at 1:12 PM, and I felt fairly fine, aside from injection site pain and some tingling in my left arm until I had sudden significant elevation of heart rate, with shortness of breath, and throat swelling/tightening at approximately 1:26PM. I cold compress was applied to my forehead and I was put in a reclining position & then received Epinephrine at 1:28PM. EMS (present onsite) arrived for transport at 1:31PM. 4L of oxygen was applied after O2 sat of 89% noted by EMS. Blood pressure was elevated to >200/100 initially by EMS. Symptoms improved quickly following epinephrine, with some residual feelings of very mild throat fullness, and I developed chills which improved over time. I was transported to emergency department where I was evaluated (symptoms mostly resolved at that time, but ED physician noted a little swelling remaining in my uvula), then IV Benadryl and Decadron were given. Later acetaminophen was also given for headache that developed during my ED stay. My vitals were monitored throughout and observation occurred until I was discharged at approximately 5:00PM, as symptoms had not recurred.	None	fexofenadine, famotidine, hydroxychloroquine,

COVID19 (COVID19 (MODERNA)) (1201)	Yes	1 day	Hospitalized	914521-1	<p>Patient presents with ? Altered Mental Status ? Headache á á HPI Patient presents to ER by EMS ambulance after family called 911 as patient was incomprehensible with slurred speech and moaning on the phone this evening. On arrival of EMS patient was asleep in bed and reportedly unresponsive other than to localize to pain. EMS transferred patient to ER. On arrival to ER patient had GCS 7. Reportedly patient is locum nurse who works in a Nursing Home and patient reportedly received COVID vaccination 2 days ago and that night reportedly began complaining to family on the phone of headache, nasal congestion, sore throat, cough, fever, chills, nausea, emesis, myalgias, and lethargy. Per the medical record patient has history of seizures, migraines, and sciatica. No other information is known on patient arrival to ER. 1. Peripheral IV right dorsal hand placed by EMS in route to ER. 2. On arrival to ER GCS 7 (E1M5V1) and roving eye movements with episodic lateral conjugate and at times disconjugate gaze concerning for seizure activity. Arms and legs with moderately increased tone but no clonic movements and patient able to localize bilaterally. 3. Ativan 1 mg IVP for seizure, then further 2 mg IVP for persistent seizure. 4. Fosphenytoin 1,000 mg IVPB in ER for loading dose of antiseizure medication. 5. Patient had significant improvement following completion of Ativan 3 mg IVP and GCS improved to 14 (E3M6V5) from GCS of 7 (E1M5V1). 6. Patient able to communicate after improvement as above and reports she has had headache or migraine for past several days as well as dysuria with bilateral CVA pain and has significant pain on percussion of bilateral CVA and moderate pain on palpation of bilateral CVA and moderate pain on palpation of bilateral flanks. No nuchal rigidity or pain with ROM of neck. Additionally, she complains of severe headache and diffuse pain of back and abdomen/pelvis. She reports a history of seizures in the past and reports she had one last month and was treated at a hospital in her home state. She denies antiseizure medications. Additionally, patient reports nonproductive cough, sore throat, nasal congestion, fever, chills, myalgias, lethargy, nausea, and episodic emesis over the past 2 days. She has anterograde amnesia following seizure and does not recall events. 7. Normal saline 1,000 mL IV bolus, then 100 mL/hour in ER. 8. CT of head with and without contrast performed and negative for intracranial hemorrhage, lesions, stroke, or other acute pathology. 9. CT of chest/abdomen/pelvis with IV contrast shows no acute pathology or notable abnormalities. 10. Lactic acid drawn and normal. 11. UA and urine microscopy collected by straight catheterization and culture collected and pending. 12. Blood cultures x 2 collected and pending. 12. Rocephin 2 mg IVPB in ER after blood cultures collected. 13. Vancomycin 20 mg/kg (1,500 mg) IVPB following Rocephin. 14. Dexamethasone 10 mg IVP in ER. 15. Duoneb nebulizer in ER. 16. Called to discuss with patient's daughter and the family's preferred contact who is 23 years old. She reports patient had COVID vaccination 2 days ago and beginning that night patient has complained of headache, fever, chills, nonproductive cough, sore throat, nasal congestion, myalgias, and lethargy. Additionally, she reports patient has history of seizures on at least 1 occasion in the past a few months ago but is not on antiseizure medications. She reports patient had MRI and MRA of her brain at that time and reportedly and intracranial aneurysm was identified at that time. 17. Called to request transfer to another facility and spoke with hospitalist who states there is no neurologist there and suggests transfer to larger tertiary care facility with neurology. 18. Called to request transfer and accepted by ER provider. 19. Transfer by ALS ground ambulance with telemetry, pulse oximetry, O2 to keep > 02%, vitals every 30 minutes, normal saline at 100 mL/hour, Rocephin 2 grams IVPB, vancomycin 20 mg/kg (1,500 mg) IVPB in ER. á DISPOSITION Patient Stabilized and Transferred Data Unavailable Wed Dec 30, 2020 2:12 AM CST</p>	COVID-19 diagnosis 12/11/2020 asymptomatic	none on file

COVID19 (COVID19 (MODERNA)) (1201)	Yes	1 day	Hospitalized	916836-1	<p>Patient is a 55 year old male with no past medical history who presents with complaint of sudden onset of left-sided nonradiating chest discomfort of sudden onset approximately 1 hour prior to presentation while doing administrative work at rest. He describes the pain as a dull heaviness sensation and approximate 3/10 pain severity. Chest discomfort was associated with a feeling of flushing that was quite transient but chest discomfort was persistent. Patient immediately presented to the ED for further evaluation. He denies experiencing any chest pain upon waking up this morning. Does note that he did have a transient episode of epistaxis on his way to work for which he had to pull over and apply pressure to his nose but this subsequently subsided and he attributed this to dry air as he has experienced epistaxis in the past but with less severity previously. In the ER, vital signs noted for BP 133/76, pulse ranging 91-114, respiratory rate 16-20, 96% on room air. Initial laboratory parameters were completely normal including normal CBC, CMP, LFT, lipase, UA, and normal D-dimer. Initial troponin was negative x1. EKG with sinus tachycardia, heart rate of 115. Noted Q waves inferiorly. No acute ST or T wave changes appreciated. Chest x-ray with mild increased density in the left lower lobe. Given this, patient was tested for rapid Covid which was negative but PCR was positive for COVID. CT of the chest noted for focal subsegmental groundglass infiltrate at the superior segment of the LLL, likely infectious versus inflammatory. Also noted small nonspecific groundglass attenuation with focal septal thickening at the right upper lobe which could be infectious or inflammatory, bibasilar atelectasis. Patient was treated with aspirin 324 mg in the ED. Of note, patient actually just received the COVID-19 vaccination on 12/24/20. He denies any shortness of breath, no cough, denies any nausea or vomiting, denies any change in taste or smell nor change in appetite. Does note 1 single episode of loose stool but otherwise denies any diarrhea. Does report that he had approximate 48 to 72-hour period of fatigue and soreness at the site of the left deltoid injection following the vaccination but otherwise no further symptoms. It is also noted that he does have a positive family history of coronary artery disease as his dad had an MI at the age of 49. Patient has never undergone a cardiac catheterization in the past but does report having a negative stress test at the age of 42. He is being admitted under the hospitalist service for further management Patient was initially admitted under observation for chest pain obs. However patient's Covid test came back positive and patient also had dynamic EKG changes concerning for possible unstable angina. Patient was treated with aspirin Plavix full-strength Lovenox along with beta-blocker and a cardiology consult. Serial troponins were negative. Echocardiogram revealed normal EF of 55 to 60% with no hemodynamically significant valvular disease. Cardiology felt that patient likely has underlying coronary artery disease have recommended discharge home with aspirin and Plavix with outpatient stress testing given his positive Covid testing. At the time of discharge patient denied any chest pain or shortness of breath. Patient was borderline diabetic with a hemoglobin A1c of 6.1. Patient was discharged home with Metformin along with glucometer, glucose strip, lancets. Given patient's tachycardia patient's Metformin 25 mg twice daily was changed to Toprol 25 mg daily. (Please note clarification in comparison to discharge home med list. Toprol XL 25 mg daily was called to pharmacy in place of the metoprolol.)</p>	Pt reported frequent urination for several months	No current medications

COVID19 (COVID19 (MODERNA)) (1201)	Yes	1 day	Hospitalized	917882-1	<p>"Patient is hospital employee who completed screening form for COVID-19 vaccine by answering "no" to all contraindication questions. Approx 10 minutes after receiving COVID-19 vaccine dose # 1, patient was still in vaccine clinic area and complained of dizziness, palpitations and flushing. I observed patient fanning herself with papers. She was escorted out of the immediate clinic room, and assessed by paramedics present as having an anaphylactic reaction. Epinephrine 0.3 mg IM and diphenhydramine 50 mg IV given in clinic. Rapid Response was called overhead and patient immediately transported down the hall to the Emergency Dept. In ED, pt was noted as having swollen tongue, large areas of erythema on face, arms and chest, shortness of breath, nausea, dizziness (per ED physician notes). Pt reported being hospitalized in ICU with COVID disease more than 3 months ago, including intubation (not treated at this hospital), and has been back at work since August 2020. ED physical exam noted bilateral wheezing and patient in acute distress. In ED, pt administered racemic epinephrine 2.25% 0.5 mL via neb, epinephrine 0.3 mg IM, diphenhydramine 50 mg IV, Solu-Medrol 125 mg IV, famotidine 20 mg IV and epinephrine 5 mg/250 mL IV drip (started at 0.118 mcg/kg/min). Acute symptoms reported to resolve in ED. COVID test was negative. ED physician discovered that pt had history of multiple medications, including previous anaphylactic reaction to radiocontrast dye requiring intubation (which was not disclosed on the vaccine screening form). Pt admitted to Telemetry floor for observation. Overnight course was unremarkable, and patient was discharged the following day with prescription for Prednisone taper and prescription for Epi-pen. Advised not to return for second dose of COVID vaccine. COVID19 (COVID19 (MODERNA)) (1201)	Yes	1 day	Hospitalized	919320-1	Right arm swelling very bad right after shot, next day woke up to get ready to work I started to get light headed, dizzy, sweating, felt like I was going to pass out. My husband then called 911. They took me to Hospital. I stayed there for a couple hours then released. They told me to stay home and the next day I felt fine. I did a televisit with my Nephrologist (Kidney doctor) the following week.	Stage 5 Kidney failure	Toperol (high blood pressure) Adderall - 20mg Calcitrol- .5mcg Sodium bycar-650mg
COVID19 (COVID19 (MODERNA)) (1201)	Yes	1 day	Hospitalized	919428-1	Felt slight warmth throughout body about 5 minutes after vaccine. Disappeared 2 minutes later. Arm started to feel sore as the day went on and was very sore by nighttime. Next day, arm started to feel better and over the next 3 days was no longer sore. On the morning of the 30th, woke up feeling fine, took a 3.5 mile walk and felt fine. Around 12:30 pm, experienced sudden pain and a burning sensation in the chest and both upper arms. Thought it was possibly heartburn ; took a Prilosec. The discomfort (mild but steady) continued so checked blood pressure which was 141/91. Called cardiologist and went to emergency room per instruction, around 1:30. Admitted overnight with the diagnosis of a mild heart attack and performed a heart catheterization where they found no major blockage. One artery noted 30% blocked but that overall heart function looked good. Discharged on 12/31/2020. - reported by patient via email, on 1/3/2021 @ 4:49pm	none	clopidogrel lisinoprel carvedilol rosuvastatin aspirin symbicort melatonin mvi vitamin d3
COVID19 (COVID19 (MODERNA)) (1201)	Yes	1 day	Hospitalized	919584-1	Lightheadedness, throat tightness. Increasing chest tightness. History of atrial fibrillation and bilateral breast implants. Received two doses of epinephrine and one dose of diphenhydramine.	No current illness for this event.	none
COVID19 (COVID19 (MODERNA)) (1201)	Yes	1 day	Hospitalized	919604-1	Presented to the ED after developing chest tightness, cough, lightheadedness, and throat closing sensation. She received the Moderna COVID-19 vaccine on the morning of presentation. Within 15 minutes of receiving the vaccine she developed pain and numbness, starting at the injection site traveling down the ulnar aspect of her arm, and nausea. Over the next several hours she continued to develop worsening nausea, chest tightness, cough, lightheadedness, and the sensation that her throat closing. She took PO Benadryl 25mg; however, her symptoms were not alleviated. She was subsequently evaluated in the ED. 4 Received PO Benadryl 25mg, IV Benadryl 25mg, Epinephrine 0.3mg x 2, IV Famotidine 20mg, IV SoluMedrol 125mg & 60mg, DuoNeb x 3, Raccapinephrine x 1. COVID19 (COVID19 (MODERNA)) (1201)	Yes	1 day	Emergency Room *	919633-1	Presented to the ED with cc of left sided facial and LUE numbness and weakness x 1 days. Patient received her COVID-19 vaccination on 12/30/2020 around 1PM. Immediately after the injection in her left shoulder, she began to feel warmth and numbness in her left shoulder, arm, neck, face, and chest. She reports later experiencing nausea, palpitations, and left arm weakness. Her symptoms persisted, and her family noted a left sided facial droop which prompted her ED visit. ã In the ED, patient was noted to have some left sided facial droop and left arm and leg weakness. CT head and CTA showed no acute abnormalities. Tele-neurology was consulted who recommended admission to rule out acute stroke. Ultimately, work up was negative and symptoms resolved. Symptoms appear to be related to the vaccine. COVID19 (COVID19 (MODERNA)) (1201)	Yes	1 day	Emergency Room *	919827-1	Began experiencing nausea and general stomach pains the morning after receiving the vaccine. After one day of pain and discomfort I woke the following morning (~44hrs after receiving the vaccine) to extreme acute abdominal pain in the lower right abdomen. Went to Urgent Care facility and was diagnosed by CT scan as having acute appendicitis. An emergency appendectomy was scheduled and performed for later that evening. I stayed at the Hospital overnight on 12/24/2020 post operatively on IV antibiotics to recover from the appendectomy. Was discharged from the hospital on 12/25/2020 and have been recovering for about 10 days now with limited activity.	none	none
COVID19 (COVID19 (MODERNA)) (1201)	Yes	1 day	Emergency Room *	921557-1	Began experiencing increased temp of 101.4 on 1/4/2021 at 0701. Temp did not resolve with the use of Tylenol. HR increased to >100 and BP was decreasing below baseline. Increased weakness also noted. Temp increased to 102.9 on 1/4/2021 at 2220. Transferred from SNF to ER for evaluation.	No current illness for this event.	cholecalciferol, iron, oxycodone, gabapentin
COVID19 (COVID19 (MODERNA)) (1201)	Yes	1 day	Emergency Room *	921796-1	Started out vague. Started with headache at the base of her head and then it felt like a web that covered her entire head. By 10:00 she did not feel good. Went to sleep instantly. Slept for about an hour. Began to have nausea. Sunday headache got worse. Started ringing , buzzing sound in her head. Took Zofran because of nausea. Sunday night chest discomfort. Monday had horrible chest pain, headache was horrible, then vomiting, went to ER, doctor felt it was a reaction to the vaccine. was give medicine for nausea and Decadron for the reaction. Gave fluids for dehydration. Got medicine for headache. Keep taking Zofran for nausea. Still has headache. Has appointment with pcp in the morning.	no	Wellbutrin, Microbid
COVID19 (COVID19 (MODERNA)) (1201)	Yes	1 day	Office Visit *	912834-1	With five minutes of vaccine Increased heart rate shot up to 198 bpm. Regular resting heart rate for me is in the 50s. Left pupil dilated completely, right people constricted to pin size. Extremes went numb and ice cold. Went to emergency room Per request of EMTs at vaccination center. Was given high-dose Benadryl and Saline IV. Heart rate return to normal and all other symptoms disappeared after treatment.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (MODERNA)) (1201)	Yes	1 day	Office Visit *	912957-1	Received vaccine at 13 15. At 1351 c/o mild chest pain. 1353 c/o throat fullness and anxiety; 1354 bp 148/81 HR 99 O2 sat 100% c/o difficulty swallowing, SOB and itching. Rapid response called. Benadryl 50 mg IVP given at 1355. 1356 Solumedrol 125mg given IV; 1357 Epinephrine given; 1358 Pepcid 20 mg given. 1400 Normal saline 250 mg IV; 1415 transported by ambulance to local ER. In waiting area in local ER no attention. Came back to Hospital and admitted to observation	None	Zrytec 10 mg; estradiol 1mg; atrovrent; singular 10mg; ventalin Advair; Lexapro 20mg; melatonin 6 mg; vitamin D; Quercitin, Vitamin C; Vitamin B1; Zinc; ASA 81 mg; daily vitamin

COVID19 (COVID19 (MODERNA)) (1201)	No	None	Emergency Room *	908431-1	I premedicated prior to injection with benadryl 50mg po and otc pepcid. Approx 25 minutes post injection felt some very mild chest pressure that slowly developed to moderate pain scale 4 over a period of approx 2 hours then returned to a mild pressure once again, all left sided and no radiation of pain noted. At approx 430pm the pressure began to increase again and became painful at approx a 5 on the pain scale, it was then I developed diaphoresis,dizziness and severe nausea/vomitting. Bright green bile appearing vomitus. Went to ED where I was given IV/Zofran 4mg x 2 doses,Reglan 10mg IV and continued go vomit violently. Recd prescriptions for antiemetic and dc home to ride out the vomiting.	No current illness for this event.	entresto,metoprolol,simvastin,oxycotin,torseamide,humex,
COVID19 (COVID19 (MODERNA)) (1201)	No	None	Emergency Room *	908471-1	I was very tired at 18:30 after receiving the vaccine at 14:29. I went to bed at 18:30 that night awoke at 3 am for work and was still very tired and body aches. I was driving to work and notice that I was having a delayed reaction to such things as I was looking at Christmas lights and had to remind myself I was driving. The drive to work otherwise I do not remember. I felt as if I was just not processing things around me correctly. At work the symptoms were intermittent. The thought process or lack of continued. I began to have stomach pain felt like diarrhea coming on however I never had it. Then nauseated and thought I was going to throw up and felt like I was going to pass out. The passing out feeling continued until I had my coworker call a rapid because I knew my blood pressure was dropping and my hear rate became slow and I was passing out. I was then taken to the emergency room to where I continued to experience orthostatic blood pressure changes and bradycardia and hypotension. I was given fluids and potassium IV and was feeling slightly better. I went home and slept for the next 18 hours. When I did briefly awaken through the evening I had an elevated temperature 102, chills and an extreme headache and body aches. Today I awoke at 6 am and still sluggish with a slight headache and absolutely no appetite.	None	None

COVID19 (COVID19 (MODERNA)) (1201)	No	None	Emergency Room *	908744-1	at 8:40 am patient felt dizzy and flushed, she asked for extra attention and indicated she felt embarrassed, but denied difficulty breathing, no trouble speaking in full sentences, no rash, no change of vision; BP was 158/108 with pulse of 95 and then patient was brought to a more quiet area and seated in a wheelchair. She was able to ambulate, a nd speak normally, but she said she felt very strange and shaky. she was visibly tremulous. She was seated, and vitals reassessed and her shakiness increased and she felt panicky. She was taken by stretcher to the Emergency room for further observation. in the emergency room, her symptoms gradually subsided. She was able to return to work after an hour of observation.	none	none
COVID19 (COVID19 (MODERNA)) (1201)	No	None	Emergency Room *	908745-1	Palpitations with HR of 120 within 5 minutes after receiving the vaccine. Wheeled to the ER for further evaluation. Dizziness and high BP. Was given Benadryl, Pepcid and Solu-Medrol and a liter of NS. Discharged after 2 hours with Benadryl and Prednisone prescribed for home meds.	None	Vitamin D supplement
COVID19 (COVID19 (MODERNA)) (1201)	No	None	Emergency Room *	908862-1	90 minutes post injection experienced numbness and tingling in all extremities lasting 1 hour. Resolved in all extremities except left arm. Left arm pain radiating from shoulder to forearm became severe. She sought treatment 12/23/2020 PM at a hospital emergency room where she received IV fluids and IV Toradol. On 12/24/2020 the pain persists but has improved with continued Ibuprofen 600mg every 6 hours and a sling for support.	none	none
COVID19 (COVID19 (MODERNA)) (1201)	No	None	Emergency Room *	908880-1	After a few minutes tingling in arms, anxious, tongue felt funny. Lasted 10 minutes. Prior medical history of panic attacks. Normal vital signs , verbal felt better sent to the ED for observation	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (MODERNA)) (1201)	No	None	Emergency Room *	908899-1	Difficulty breathing, palpitations, feeling like she is developing hives	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (MODERNA)) (1201)	No	None	Emergency Room *	908915-1	""Moderna COVID-19 Vaccine EUA""; patient reported jaw and throat area felt numb approximately 30 min following vaccine. Patient vital signs were taken and patient was monitored the entire time: BP and heart rate readings: 140/89, HR 64; 126/85, HR 73; 136/99, HR 69; 139/94, HR 68; 100% pulse oximetry all readings, each approximately every 10 min. Patient stated she was not getting better, but able to speak. EMS was called and arrived; patient was taken to hospital."	Hx of asthma; Celiac disease	None noted
COVID19 (COVID19 (MODERNA)) (1201)	No	None	Emergency Room *	908923-1	Patient was very anxious about getting her vaccination. After a couple minutes of receiving the vaccine, the patient went to stand up from the chair she was vaccinated in and became light headed. She then put her head on the table and began shaking. She was safely lowered to the floor and placed on her back. 911 was called and paramedics arrived within 10 minutes. The patient was lucid and responsive, but breathing quickly and shaking. She was taken to the hospital by paramedics and discharged shortly after arriving.	No listed medical conditions	None listed.
COVID19 (COVID19 (MODERNA)) (1201)	No	None	Emergency Room *	908928-1	Approximately 9 hours post injection, patient developed chills, fever, cough with phlegm production which then progressed into uncontrollable cough. Patient went to ER, treated with albuterol inhaler and released without restrictions. Pt using inhaler but symptoms decreased at this time.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (MODERNA)) (1201)	No	None	Emergency Room *	908929-1	"About 10 minutes after injection, c/o tachycardia and became diaphoretic and stated she felt ""weird"" Taken to ER for eval/tx."	Cold and sore throat. COVID test was negative 12/3/20.	None
COVID19 (COVID19 (MODERNA)) (1201)	No	None	Emergency Room *	908998-1	I started feeling palpitation after 2 minutes then was placed in the observation room. Vital sign showed heart rate of 145 with normal blood pressure and oxygen. Then after few more minutes I started feeling numbness and tingling in the mouth and started feeling dizzy and had cold sweats. Heart rate was 130s and BP was undetectable and my skin was severely pale. I administered my Epipen and rapid response team arrived after few minutes. I felt better 5-6 min after infection of the epipen but was still feeling dizzy and mildly short if breath. I was transferred to emergency room when I was treated with IV steroid, benadryl , pepcid and IVF. I was observed for 4 hours and was discharged with improvement in symptoms .	Vit D deficiency, Fibromyalgia, GERD	No other medications for this event.

COVID19 (COVID19 (MODERNA)) (1201)	No	None	Emergency Room *	909464-1	Within minutes of inoculation, site area became extremely itchy. I brought this to the attention of the medics in the 15-minute observation room, and they immediately took me to an exam room where I was attentively cared for by several nurses, medics, and healthcare staff. I was given liquid Benedryl as my arm began to rash around the site. Within about five minutes of being in the exam room, my tongue began to feel like it was swelling in the back of my mouth, it soon began to feel swollen through the whole tongue, and it became increasingly difficult to swallow. Upon notifying the nurse nearby, I was immediately given an EpiPen injection. I do not know what may vitals were as everything happened very quickly, but I was told that my face, neck, and chest became rashy quickly, but subsided after several minutes from the EpiPen, at which time I was given more liquid Benadryl. Once stable, I was taken to the emergency room for monitoring for two hours. I felt better quite quickly after arriving in the emergency room, but the itching persisted through the evening. After 15 hours of sleep, I awoke to only a sore arm and thigh from each injection site. COVID19 (COVID19 (MODERNA)) (1201)	No	None	Emergency Room *	910370-1	34 year old female who reports localized redness and itching within 5 mins after injection. Patient denied any shortness of breath, GI symptoms or rash. VSS. Patient received 50mg of Benadryl. Approx 5 min later patient developed throat tightness. Patient was promptly administered EPI. Patient developed urticarial like lesions. Patient reported improvement in throat tightness but continued to complain of itching at injection site. An additional 50mg of Benadryl was administered. Patient reported improvement of itching approx 5-10 min later. Patient VSS stable throughout but developed tachycardia.	Denies	No other medications for this event.
COVID19 (COVID19 (MODERNA)) (1201)	No	None	Emergency Room *	910372-1	Patient developed wheezing, c/o difficulty breathing. Denies tongue swelling, no visible rash. Treated with albuterol nebulizer and transported to hospital.	None	Unknown
COVID19 (COVID19 (MODERNA)) (1201)	No	None	Emergency Room *	910532-1	Employee has history of anaphylaxis and was in the 30 min observation. C/O dizziness. Sits on gurney at 45 degree angles. No sob, chest pain or hives. VS obtained and employee hypertensive. Under observation of RN. Able to sip on water, but continues to have HTN and dizziness. Taken to the ED for further evaluation of symptoms.	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (MODERNA)) (1201)	No	None	Emergency Room *	910587-1	I received my first dose of Moderna vaccine at around 9:45 am on Dec 24 and I was fine for like 4 hrs after receiving it, until I started feeling similarly to the way I felt when I tested positive for Covid and had it at the beginning of November (feverish, headache, body ache, stuffy mucusless nose, fatigue, hangover sensation like nauseated and weird, etc...) Things got a little bit worse when all of a sudden I started feeling feverish and my heart started beating so fast I could hear it myself. I had to stop doing what I was doing and called (my insurance/MCD) because I was getting anxious and started hyperventilating, which did not allow me to breathe normal. They told me to take Tylenol which I did and little by little my fever started decreasing; it must have been almost 100 F at that moment. Then once again like 5 hrs after I had taken Tylenol I started getting fever again and this time I got extremely cold also and I was shaking so much and felt so weak I had to lay down and call once again; they told me to have someone take me to their urgent care center and I went there and they retested me for Covid but it was negative this time. Since I had taken Tylenol (2nd time same day, 6 hrs apart) just before I left, my fever was not that high when I showed up there. They told me studies have showed some people experience similar symptoms but when they get the 2nd not the 1st dose; however, they thought it could happen too. I had fever nonstop for almost 48 hrs; it was so high (101.7-highest reached). The rest of the time?at night when I was trying to sleep, obviously I could not take my temperature, I was half awake, half sleep hallucinating, shaking, cold, then hot and sweating a lot and speaking non sense in my sleep (according to my spouse)- this happened both nights. On Dec. 26 I woke up feeling not great but definitely better but had a little headache and still felt somewhat nauseated. My last dose of Tylenol I took at 8 pm on Dec 25. I have been feeling better for the past two days but I still feel a little bit tired and not back to my normal self.	HIV + (undetectable) and had Covid at the beginning of November but recovered at the time of vaccination	Vitamins C & D. I also take HIV medication (Biktarvy- 1 pill once a day) and also Pantoprazole 1 pill once a day
COVID19 (COVID19 (MODERNA)) (1201)	No	None	Emergency Room *	910609-1	The patient experienced diffuse rash on the upper extremities as well as a scratchy throat 16 hours after vaccination.	Unknown	unknown
COVID19 (COVID19 (MODERNA)) (1201)	No	None	Emergency Room *	910616-1	Approximately 4 hours after vaccine, noted hives/welts on arms, took cetirizine. Went to bed. ~8pm (4 hours later) was very itchy, swollen, discolored face, face felt cold/body hot. No difficulty breathing. Lips purplish, arms swollen. Went to ED. Given benadryl, 2 other pills, watched for 30 minutes. No epinephrine. Hives improved, released, had headache. Next day improved, but still mild headache and groggy. Hives gone completely 48 hours. Mild headache persists. No prior experience like this.	No	not recently
COVID19 (COVID19 (MODERNA)) (1201)	No	None	Emergency Room *	910692-1	Moderna COVID-19 vaccine EUA Developed throat, cough and throat clearing during observation period. Refused epinephrine. Code assist called and person was taken to ED where received Solumedrol, famotidine, Pepcid, and Benadryl; continued to refuse epinephrine in ED. Symptoms resolved and discharged home.	unknown	unknown
COVID19 (COVID19 (MODERNA)) (1201)	No	None	Emergency Room *	910705-1	Started having chest pain and shortness of breath approx. 10 hours after injection. Symptoms kept Worsening. Taken to the ER. Cardiac workup performed. It was negative. Diagnosed with Pleurisy.	none	none
COVID19 (COVID19 (MODERNA)) (1201)	No	None	Emergency Room *	910718-1	Warm, tingling & numbness 10 minutes post injection. Monitoring indicated elevated HR & BP. Team member released after 50 minutes. TM was driving her clinic and developed left side numbness to her cheek, upper arm and lower left back areas. Supervisor completed incident report and had team member go to urgent care and then went to ER. TM drove herself. ER provider Dr. contacted EH and informed us that TM did not have anaphylaxis and has no known allergies. She also drew CBC, Mag, Urine pregnancy & performed a CT scan w/o contrast to rule out kidney stone. No significant findings were noted.	NA	Mirena IUD, Albuterol, Omeprazol, Phentermine, Effexor

COVID19 (COVID19 (MODERNA)) (1201)	No	None	Office Visit *	910547-1	I'm not sure this is entirely vaccine related, but I wanted you to be aware. I occasionally experience unexplained swelling of my lips. It has been investigated by an allergist, but the cause is unknown -- doesn't appear to be a food allergy (no trigger foods identified, and it has never appeared immediately after eating), and may not even be histamine related. It could be something immune-system related, and my experience this weekend might support that. I had normal, expected symptoms on Friday evening (chills, headache). Those resolved Saturday. Saturday night, my lower lip swelled dramatically. Swelling spread into the upper lip as well. I have seen this before, but this was one of the more severe instances I have experienced. Lips remained swollen overnight. When I woke up Sunday morning and went to the restroom, I became suddenly lightheaded and passed out. That's a symptom I have never experienced before. I consulted with my primary care doctor and took it very easy the rest of Sunday. He and I will follow up to further asses what happened. No further light-headedness on Sunday or today. Lips eventually resolved late in the afternoon. This is all about 72 hours after the vaccine, so I can't be sure it is related, but I do wonder if it is related to having my immune system revved up by the vaccine. I reported it on the CDC check-in app and my primary care physician is noting it on his side as well.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (MODERNA)) (1201)	No	None	Office Visit *	910584-1	Rash and Hives	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (MODERNA)) (1201)	No	None	Office Visit *	910598-1	10:30am - Received the Vaccine Shot 11:30am- Warmth throughout face, then right had went all tingly, then numb and swollen. The numbness crept up the arm to the elbow. Then the nose started to get tingly and numb followed by the lips and gums. 12:00pm - Started to not be able to speak a sentence. The words were coming out of my moth very jumbled even though in my mind I knew what I was trying to say. Still numb in right hand, and on right side of face. 12:10 pm- Could not see fully out of the right peripheral of my eye as well to the other symptoms of not being able to speak a full sentence. I was able to speak less words than I had about 10 min prior. Numbness in my hand went away at this time. 1:15pm- I was able to speak mostly full sentences again. I got a pounding headache on the front to left side of my head and felt fatigued. 1:40pm- Finally able to speak full sentences again, I could feel my hand and all the parts of my face. Felt weak, still had headache and felt nauseous and dizzy. 2:15pm- Took 1 advil, fell asleep 4:00pm- Woke up, felt weak, disoriented, still had a headache. 8:00pm- Only a small headache left and a sore arm	n/a	Junel FE 1.5
COVID19 (COVID19 (MODERNA)) (1201)	No	None	Office Visit *	910629-1	Patient evaluated and monitored following vaccine. Developed nausea and lightheadedness approximately 20 minutes after dose given. Patient reports that she hadn't had anything to eat or much to drink in the hours leading up to vaccine as she and her husband were going to get lunch after the vaccination appointment. Patient has a history of syncope/preyncope after a blood draw in the past. Patient had no other stx other than very transient nausea and lightheadedness, which improved significantly in the hour that she was monitored. COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	906818-1	During 15 min observation, employee reported tingling in her lips. She is allergic to grass and has experienced this feeling when she is having an allergic reaction. Employee taken to gurney, VS taken. No hives noted. Reported her throat feels a little tight. 50 mg of Benadryl given. See attachment for VS record. 1:1 observation by RN. No further s/s. Employee states points to her flowers and says it could be the flowers my mom sent me for vaccination day. Monitored employee until 1950 when she was taken home by a co-worker. Employee states she has improved s/s and is now just drowsy. Informed to discuss reaction with PCP and/or EH. Instructed to call EMS or go to ED if symptoms come back.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	906836-1	Nausea, deep harsh dry cough, HA, burning and tightness across shoulder blades. Arm very sore the next morning	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	906858-1	At the 10 minute mark patient reported not feeling well. She was noted to be pale. Then she reported having slight breathing problems along with her heart racing. Call for ER staff to report to vaccinating area. Patient's breathing concern resolved on its own by the time ER response team arrived within 2 minutes. Patient slowly gained her color back. Heart palpitations lessening but still reported by patient. Blood pressure / O2 Saturations / Respiratory rate monitored. No oxygen or treatment required at this time. Patient taken upstairs to be monitored by ER staff.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	906868-1	About 5 minutes after receiving vaccination patient noticed her left arm was very cold and then it went numb from the base of her left ear to her hand. Tested strength in both hands and it was equal. After 20 minutes the patient stated that the numbness was going away but the coldness was still present in the left arm.	None	No other medications for this event.
COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	906950-1	Severe headache chills, body aches, arm pain, Nausea, fainted on standing, dizziness	None	levothyroxine
COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	906960-1	Patient describes feeling hot, clammy and lightheaded about 5 minutes after vaccine administration. BP:109/69 P:72 O2Sa:100% Patient states that injection site feels ok. Got patient a juice and had her sit for another 15 minutes. BP: 118/63 P:74 O2Sa: 99% Patient has normal hand and arm strength bi -lat. After patient had cold juice and was able to breath without her mask on she felt much better. Patient was able to stand and walk without dizziness. Patient stated the she did not feel she needed further treatment.	None	Multivitamin
COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	906974-1	About 5 minutes after the vaccine was given patient describes numbness and tingling from injection site to pinky and that lasted about 5 minutes. Patient started feeling a flush/warm feeling across chest about 15 minutes after vaccine. No dizziness or lightheadedness. Flushed feeling lasted about 30 seconds. Patient feels much better after 25 minutes of waiting time. She states she does not require any further treatment.	None	None
COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	907032-1	States had generalized itching and ask for benedryl. 50mg Benedryl Tablet given PO after 10 minutes ask for Pepcid. After 15 minutes states he feels better and issues resolved	none	Benedryl 50mg and Pepcid 20mg Tablet
COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	907058-1	itchiness in throat, mild tongue swelling. Administered Benadryl 50 mg, sx resolved 5-6 minutes after medication administered	cold x3weeks ago. negative for covid.	none
COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	907081-1	"1600 Patient c/o itchiness to neck and face felt on coming rash 1625 notified me of reaction, advised to take Benadryl 50mg 1630 notified Pharmacist of reaction 1645 follow up with patient ""doing okay"" 1700 follow up call feeling the same not worse, leaving work for home, aware to go to ED if symptoms worsens"	none	prebiotic Allegra multi vitamin
COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	907085-1	Patient felt heart racing immediately after getting vaccine. Vital signs taken: BP163/84 P:150 O2Sa:100% Patient felt hot flush all over face. Got patient ice water and had patient call for a ride home. Friend is coming to get her. Vitals taken 1802: BP: 147/116 P122 SaO2: 100% Patient sitting resting. Vitals taken: 1809: BP 156/90 P:113 Sao2:100% Patient started having chills - warm blankets given. Vitals taken 1820: BP: 138/94 P: 109 Sao2:100% T:98°F Patient resting in chair. Friend arrived to provide ride home. Vitals taken 1830: 142/84 P:94 Sao2: 100% Vitals taken 1850: BP:127/87 P:102 Sao2: 99% Patient did state that she has been under extreme stress with the death of her husband in November. And today was her first day back to work. Had patient stand and walk around a little, no dizziness noted. Gave her some pretzels to snack on and after 5 minutes she stated she was feeling almost back to normal. Patient's friend is an RN and was going to have patient spend the night at her home. Patient stated she did not feel she needed to see a provider and felt that she would be ok in her friends care.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	907098-1	Patient received Moderna COVID vaccine at 1926. She completed standard 15 min observation time and was dismissed from clinic. Patient returned to clinic at 2000 with redness at injection site, itching, chills. BP 126/90 and pulse 86, patient able to speak comfortably. Diphenhydramine 25 mg given orally. Patient observed for 36 minutes. All symptoms resolved and observed redness to left deltoid completely resolved. No complaints of shortness of breath or difficulty breathing. Patient discharged from clinic to another facility with appropriate follow up instructions. Patient texted ahead to her preceptor that she is en route.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	907194-1	Moderna COVID-19 Vaccine- Fever, Chills, Muscle and joint aches, headache, fatigue. Self limiting, went to bed and woke feeling better. Only fatigue now.	None	Aspirin, Lopressor, Lisinipril/HCTZ, Rosuvastatin
COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	907196-1	My period bleeding more than usual	No	Period bleeding more than usual
COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	907250-1	Vomiting, Cheeks feel tingling, Slight difficulty swallowing. Rest and will take oral Benadryl when gets home. Will take Phenergan for nausea when gets home as well. Starting to feel better after 2 hours.	n/a	Buspar, Ventolin, Nuvaring, Phenergan
COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	907291-1	Woke up with severe bodyaches worse on injection site with fever of 100.6 degrees farenheit.	none	none
COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	907302-1	12/23@9:35am EST- Caller stated on12/22/20 at midnight he felt fever 103.0, chills, muscle soreness and aching, nausea and extreme fatigue. Caller called Primary and was told to take Tylenol 1gr. Benadryl and naproxen for headache and body aches. Rash covered arms , neck and thighs and patika on elbow and armpit. This morning rash is still prominent, eyes are swollen and urine is bright red. Caller is awaiting primary to call back.	none	vit B,b12, finasteride, vascepra, Pepcid, Tylenol, naproxen, Benadryl, and androgel, MGUS (autoimmune disorder)

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	907306-1	Sore arm, fever (Max 100.5), body aches, chills, headache, fatigue, general malaise	n/a	Lo-Lo estrin
COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	907325-1	Reported fever of 100.8, nausea, headache, chills, arm pain- which is common reported side effects of vaccine. Patient reported walking up in the middle of the nights gasping for air- short of breath. Only lasted 3 times during the night, no interventions were done. Went away on it's own.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	907334-1	Seen in urgent care approx. 30 minutes after vaccination for diffuse muscle aches, nausea and dizziness, her BP was elevated. Treatment dug:	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	908925-1	Five minutes after receiving the vaccine I started feeling slight nausea, which got progressively worse, started feeling lightheaded and had to sit down at about minute 6, at 7 minutes a clinical assessment team was called because I was feeling like I was about to pass out. Everything seemed far away and removed and sound distorted/muffled, I was extremely nauseated, lightheaded and extremely thirsty and was seeing ? spots? in my vision. When the team arrived only a minute or so later, they checked my vital signs and found that my blood pressure was low, at 89 for systolic, with my normal systolic being 120-130.. I got very pale all over and my arms and especially fingers became weak, numb and tingly, the left arm more than the right. I was told I had a vasovagal response and also that I was expelling too much CO2 because I had been hyperventilating. I was monitored and given po fluids for about half hour at which point I felt recovered enough to leave. I was offered/recommended being checked out at the emergency room but declined	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	908927-1	Whole body aches, fever, loss of appetite. Took Tylenol. Symptoms decreased after about 24 hours, but currently still present (still have a low fever).	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	909373-1	dose 1 of vaccine at 11am 12/24/20, after vaccination I noticed some pain and burning that radiated down arm, lasted for seconds and resolved. This pain came and went throughout afternoon of 12/24. Upon waking around 730am on 12/25/20 I noticed slightly red erythematous ovoid rash that measured approx 3 in x 1 in in size, was exquisitely tender to touch, but smooth, without vesicles, pustules, non-fluctuant. Took tylenol and applied heat to area without relief of pain. Pain is burning in nature, with a soreness that radiates down the back of my upper arm. Pain worse with raising or using arm. Also have itching in neck and upper back. Also having increased fatigue and slight headache all of 12/25, worst at night and located on right side of head, throbbing. On 12.26.20 I woke and noticed rash has slightly increased from markings made on 12/25/20. I continue to feel tired, achy, with slight headache. Arm very sore and upper back very sore.	none	Vit D3 1000 U Vit B12 250 mcg zyrtec 10 mg

States that approximately 4 hours after administration , he had elevated BP (148/92) and heart rate (115bpm). Normal readings are HR in the 60s-70s and ""normal"" BP 120/60s. Had fever of 102 the first night that lingered for 48 hours, accompanied by extreme fatigue, nasal congestion, shortness of breath, decreased appetite, He took tylenol for fever and afrin for nasal congestion. By the 26th, he felt well enough to get dressed. No fever, appetite back to normal. BP on the 26th was normal to low and heart rate 105. Adverse reactions required no further treatment."	unknown	unknown
COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	910269-1	Assigned to work at nursing location. I reported for duty on 12/23/2020 @ 1310 and was offered the vaccine. No reaction at that time. Several hrs into my shift I became ill. Nausea, vomiting, trouble breathing, tongue was feeling funny, dizzy, stomach pain, extreme fatigue and lightheaded. I immediately reported to the charge nurse on the floor then shortly called my registry informing them of the current events. Registry offered to call 911 and I declined. Registry gave permission to end of shift and go home. However when I notified the charge nurse on the floor she stated I can't leave because she was leaving for the day. She called supervisor. I spoke to him and explained the situation and he informed me another person whom was a MD also was experiencing the same symptoms. He instructed me to stay in the room I was at and they will send orange juice it should make me feel better. I waited and waited. I called the sup back and informed him my symptoms are getting worse and need to go. At this time I had developed a severe headache. I was not able to continue with extremely HEAVY workload caring 29 COVID patients in my condition and sup allowed me to go home. He said he would talk to the floor nurse because he had already arranged for 2 nurses to come in 7 pm which was shortly. Once home, my husband said I had a blank stare and dazed. Several hrs later I developed a fever, cough and severe body pain. I remained in bed for several days and most symptoms resolved. However on the 4th day went out and within a few started to become short of breath and heaviness on my chest and attempted the following day going outside and the same thing. I continue to have intermittent stomach pains and coughing.	None	Levothyroxine 100 mcg

COVID19 (COVID19 (MODERNA)) (1201)	No	None	None of the above	911548-1	On December 23rd, around 5:30-6:00 p.m. I received the Moderna COVID-19 Vaccine EUA at the Vaccination Site. I did not have any adverse symptoms until the night of December 24th around 11:30 p.m. It started that night with nausea. I initially thought it was something I had eaten. I went to bed feeling nauseous but fell asleep. I slept through the night, and work up the next morning, December 25th, still nauseous. I did not ever vomit, even though I very much thought I would. As the day progressed, I developed chills and a low-grade fever. This continued through the day. The nausea was terrible! I could not eat anything because the mere thought of food made me feel sicker. I drank very little as well. I also developed flu like symptoms. I could not stand to be touched, as my skin was highly sensitive to touch. (The same feeling you get if you have a bad case of the flu.) I used a cold wet washcloth all day, as I felt hot, but my fever never went over 99.7 degrees. I eventually fell asleep that night, but I was restless. I woke up several times to noises in my home. Each time it felt like my body was trembling or my heart was racing or fluttering, but these episodes did not last long, nor could I tell you for sure that was exactly what it was. I just felt shaky. Each time I fell back asleep. The next morning, December 26th, I awoke, and the nausea was gone, but the chills and the fever were still hanging on. I just felt bad! I used a cold wet washcloth on my forehead, face, and neck all day. I did eat maybe 5-10 dry saltine crackers and drank a glass or two of sprite. As the day progressed, I felt worse!! The nausea came and went all afternoon and into the night. I eventually fell asleep around 10-11:00 p.m. I slept all night. I awoke the next morning, December 27th, initially feeling nauseous again. I made it a point to drink a lot of Gatorade and sprite throughout the day. I found that I felt some better when I sat up but felt worse when I laid down. So, I sat for about an hour on the side of my bed. I eventually got up and walked around my house. I began to feel better and thought I might be able to shower and possibly eat. So, I did? and it was like my body did a 180! I quickly felt so much better. I ate some soup and drank some sprite. I didn't completely go back to my normal routine, but I did stay up the remainder of the day and did not get sick. The next day, December 28th, I felt like myself again and pretty much went back to my normal routine. The most interesting side effects that I had that are not mentioned in the CDC COVID-19 Vaccine common side effects are: *My feet were ice cold, but they were wet with sweat (I put on socks to try to warm them up, but it did not help as my socks would get damp thus making my feet colder) *My tongue became coated white (I did not lose my sense of taste or smell) *My skin felt hot to me, even though it was not hot to the touch (I used a cold wet washcloth for 2-3 days straight)	None	Women's Multi-vitamin Vitamin D3 supplement 2 prescription drugs

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Death	921667-1	LTCF Pfizer Vaccine clinic conducted 12/29/2020 Vaccine lead received a call indicating that a staff member deceased somewhere between 1/3/2021 and 1/4/2021. Cause of death is unknown, and an autopsy is being performed.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Death	921768-1	Vaccine received at about 0900 on 01/04/2021 at her place of work, Medical Center, where she was employed as a housekeeper. About one hour after receiving the vaccine she experienced a hot flash, nausea, and feeling like she was going to pass out after she had bent down. Later at about 1500 hours she appeared tired and lethargic, then a short time later, at about 1600 hours, upon arrival to a friends home she complained of feeling hot and having difficulty breathing. She then collapsed, then when medics arrived, she was still breathing slowly then went into cardiac arrest and was unable to be revived.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Death	921880-1	The resident was found deceased a little less than 12 hours following COVID vaccination, and he had had some changes over the last 2 days. He was 96 and had been on hospice care for a little while. Noone noticed any side effects from vaccine after it was given	was under hospice care	Olanzapine, polyethylene glycol, ativan, morphine, senna
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Death	924456-1	Patient did not display any obvious signs or symptoms; the vaccination was administered at approximately 10:00 AM and the patient continued throughout her day without any complaints or signs of adverse reaction. Patient was helped to bed by the nursing assistant estimated at around 9:00 PM. The facility received notification from the lab around 11:00 PM that the patient's COVID-19 specimen collection from Sunday, 1/3/21, detected COVID-19. When the nursing staff went to the room to check on the resident and prepare her to move to a COVID-19 care area the patient was found unresponsive, no movement, no chest rises, noted regurgitated small amount of food to mouth left side, lying on left side. Pupils non reactive.	COVID-19 detected after vaccination; asymptomatic	Lexapro, famotidine, Namenda, Seroquel, simvastatin, Trazodone; Tamsulosin; Docusate sodium; Polyethylene glycol; Celebrex; Acetaminophen
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Death	924464-1	coughing up blood, significant hemoptysis -- > cardiac arrest. started day after vaccine but likely related to ongoing progression of lung cancer	COPD, lung cancer	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Death	925556-1	Expired 1/05/2021	Acute on chronic heart failure, sepsis	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Death	926269-1	"Pt last seen at 1200 by nurse for ID band check. No visible signs of distress noted. Pt states ""I just want to be left alone"". 1230 nurse was called to pt room. Pt was noted unresponsive, no pulse and respiration noted. CPR started immediately, at 1239 first shock given. 1245 EMT took over, at 1319 EMT called time of death"	Fracture of right superior and inferior pubic rami, fracture of the right sacral ala, and fracture of the L3 vertebral body. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Life Threatening	903324-1	40 min after injection my throat and tongue started to feel weird and tight, pharmacy at my work hospital gave me 25 mg Benadryl and 650mg Tylenol. At about 1 hr 45 min after injection my throat got to the point of so swollen and itchy I couldn't swallow. I went to nearest emergency room hospital they administered decadron orally, Pepcid P.O., and Toradol via IM.	None	2 flintStones gummies Childrens multivitamin supplement daily.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Life Threatening	904029-1	15 minutes after getting the vaccine began itching that quickly developed into rash/hives to face, neck, chest, abdomen. At 20 minutes post vaccine developed severe leg weakness with lightheadedness, chest tightness, and SOB. 22 minutes out collapsed to the floor unable to bear weight due to leg weakness and had severe cramping and tingling in legs, still unable to move them. Was rushed to the ER from employee health and arrived approximately 30 minutes post vaccine administration at that time there was significant mottling to arms and hands with polar nail beds. Vital signs were stable, no strider. Given Solumedrol, Benadryl, and Pepcid STAT. Rash/hives and SOB improved, but legs weakness/tingling, cramping did not and noted purple feet with cyanotic nail beds and mottling to hands/ arms that would come and go. Rash/hives reappeared much worse 2 horse post meds to face, neck, and upper chest. Was given another series of Solumedrol and Benadryl and admitted to the hospital. I am now 19 hours post vaccine with improved but persistent leg weakness, now able to bear my own weight independently and walk a few steps, but still having legs cramps and intermittent tingling to feet. Color has improved with resolved mottling/cyanosis. I continue to have hives reappear with scheduled Benadryl, Solumedrol, and Pepcid.	None	Topamax 50mg daily, Celexa 10mg daily, Imitrex 100mg PRN
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Life Threatening	904260-1	12 minutes after injection, I felt flushed and dizzy. They hooked me up to a vital sign monitor which showed my heart increasing to 133 bpm, SaO2 98%. A manual blood pressure check was 168/110. My heart felt like it was pounding, I was hot and sweating. After 10 minutes or so, I felt increasingly dizzy and my vision started fading. VS still showed tachycardia and hypertension. It became difficult to swallow and my tongue was feeling fat. A Rapid Response Team was alerted, they started and IV, and took me to the Emergency Department. I became very cold and shaky. My hands and feet became a little mottled. They gave me 50 mg IV benedryl, 20 mg IV pepcid, a dose of solumedrol, and IM epinephrine 0.3mg, and 1 Liter of fluid. My symptoms resolved and I was discharged home a couple hours later.	Cervical radiculopathy with medrol dose pack on 11/24.	Symbicort, albuterol

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Life Threatening	910035-1	right after the vaccine she felt light headed felt better in observation after about 7 minutes employee c/o heart racing,Chest pressure, feeling light headed, throat scratchy and right , allergy to MRI contrast dye only - Gadolinium. Has had lots of vaccines in the past without problems. Taken to ED via W/C was talking all the way not SOB admitted to ED. 12-28 States she was admitted to the hospital overnight for anaphalaxis on a second trip to ED. She will not be able to get her second dose of the vaccine. this should be entered into the VAERS reporting system. She is till using the benedryl.	none	Thyroid 250 mg qd, Benedryl 25 mg q 6 hours, prednisone 40 mg daily, ibuprophen 200 mg prn for chest pressure,
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Life Threatening	911462-1	she is better but still not good; not to be able to breath; sore right arm; This is a spontaneous report from a contactable nurse (patient herself). A 62-year-old female patient received bnt162b2 (BNT162B2, lot EK5730), intramuscular on 18Dec2020 at single dose for immunisation. Medical history included asthma (hospitalized on Jan2020 and has not had any issues since that time, referring to her asthma) diabetes, high blood pressure, swelling, sciatica, blood cholesterol abnormal, rosacea, reflux, allergies, sinus congestion, shingles and post carpal tunnel surgery. Concomitant medications included lisinopril, hydrochlorothiazide, gabapentin, rosuvastatin, metformin, glipizide, doxycycline, sucralfate, cetirizine hydrochloride (ZYRTEC), pseudoephedrine, ascorbic acid, ergocalciferol, nicotinamide, retinol, riboflavin, thiamine hydrochloride (VITAMINS) and tramadol. The patient reported that she not to be able to breath (seriousness criteria-life threatening) on 22Dec2020. She woke up this morning and could not breathe and there was no reason for her to not be able to breath. She thought she may have had a reaction to the COVID vaccine. It was the only thing she could think of that might have caused her not to be able to breathe this morning. As treatment for not to be able to breath, she used Budesonide and Levosulbutamol in her nebulizer. She had sore right arm on 18Dec2020. She informed that she had done everything she can and she was better but still not good. She planned to take the second dose of the COVID Vaccine because she thought it was more important to be protected. She suspected that the vaccine was related to the events sore right arm and could not breathe. The outcome of the event not to be able to breath was recovering; for sore right arm was recovered on unknown date in Dec2020; for she is better but still not good was unknown.; Sender's Comments: Severe allergic reaction including anaphylaxis is the known risk factor; a possible causal association between administration of BNT162B2 and the onset of not being able to breath cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	; HCTZ; ; ; ; ; ZYRTEC [CETIRIZINE HYDROCHLORIDE]; ; VITAMINS [ASCORBIC ACID;ERGOCALCIFEROL;NICOTINAMIDE;RETINOL;RIBOFLAVIN;THIAMINE HYDROCHLORIDE];
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Life Threatening	911943-1	Adverse reaction post Covid vaccine. Waited for 20 min post vaccine. Experienced S/S Heart palpitations, shortness of breath, tingling in extremities, diaphoretic after leaving clinic observation. Drove back to hospital, escorted by pre surgical testing hospital staff and taken by wheelchair to ED.	None	Lo Loestrin, Hydroxyzine, Folic Acid, Melatonin, Multi Vitamin, and Vitamin D.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Permanent Disability	910649-1	<p>"low grade fever; Her blood pressure was high/ still really high/ blood pressure was up; headache; Fifteen to twenty minutes after she received the vaccine she became light headed and dizzy/ light headedness and dizziness; This is a spontaneous report from a contactable nurse (patient). A 36-year-old female patient received BNT162B2 (Lot#: EK5730) via an unspecified route of administration on 17Dec2020 afternoon at single dose in the left arm for COVID-19 immunization. Caller was unable to confirm the manufacturer of the vaccine that she received. It is not written on the card, and she didn't see the vial. The patient medical history was not reported. Concomitant medications included oral contraception pill, but the name was unknown. Fifteen to twenty minutes after she received the vaccine on 17Dec2020 she became light headed and dizzy. She had to catch her breath. She couldn't shake it off. The light headedness and dizziness lasted at that intensity for 10 minutes, but it never went away. They encouraged her to be admitted in the emergency room (ER). She would say that the seriousness of being light headed and dizzy was disabling. Caller didn't remember the exact numbers for her blood pressure. It was 160's over 105. Her heart rate was in the low 100's, around 105. She stayed at the first monitoring station in the vaccine area for 2 hours. They were taking her blood pressure every five minutes. She was given diphenhydramine hydrochloride (BENADRYL) there and lots of water. After 3 hours and she was not improving they called a ""code medic"" that got the medical director and nursing supervisor to come. They encouraged her to go to the ER for continual monitoring. She stayed in the ER for 4 hours and was given meds to help with the blood pressure. She was discharged from the ER home. She was nervous because of all this stemming from the vaccine. She had a low grade fever on 18Dec2020 (Friday) night. Caller stated her work had already reported her reaction. Occupational safety and the medical director are aware. Caller does not have reference number to provide. On 18Dec2020 (Friday) she was not overly concerned because it was the next day. Her blood pressure was high and her heart rate was in the 100's. They monitored her for a couple of hours and she was given a diphenhydramine hydrochloride (BENADRYL). She went to the emergency room (ER) for a few more hours and received additional treatment. They sent her home to be monitored at home. She has been taking her blood pressure every day since and it had not come down. It was still really high. She called her primary care doctor. He was wanting her to start blood pressure medication. She was concerned about starting it with the assumption that it was related to the vaccine. She would like to know the right thing to do. It seems safe to take the medicine, but it was unknown that whether it was going to mask the blood pressure and something else be going on. On 18Dec2020 she still had a headache and didn't feel well, but she thought she needed to give it some time. She had been anticipating not to feel well on 18Dec2020 (Friday). On 19Dec2020 she felt better considering she didn't have a headache. On 19Dec2020 (Saturday) her blood pressure was 138/90 and she felt good. Then on 20Dec2020 she had the bad headache and her blood pressure was up. On 20Dec2020 (Sunday) she had a bad headache and her blood pressure was 156/100. She came to work today and her blood pressure had been high all day. She still had a headache and the light headedness continued. The outcome of the event low grade fever was unknown, of other remain events was not recovered.;</p> <p>Sender's Comments: A causal association between BNT162B2 and the event dizziness cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate."</p>	No current illness for this event. Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER- BIONTECH)) (1200)	Yes	None	Permanent Disability	911465-1	positive COVID-19 test with symptoms; positive COVID-19 test with symptoms; Soreness at injection site; This is a spontaneous report from a contactable nurse (patient). A 40-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 17:30 in the left arm at single dose for COVID-19 immunization. There was no medical history or concomitant medications. The patient experienced soreness at injection site, cough, body aches on 19Dec2020; sore throat, voice changes from coughing on 20Dec2020; tested positive for covid on 21Dec2020; mild low congestion, loss of taste and smell on 22Dec2020. The nurse stated that he got the vaccine on Friday (18Dec2020). The next day (19Dec2020) he had common side effects: Soreness at the injection site and body aches, which were expected. He also had a cough on top of that, which progressed to the next day. His body aches and coughing were infrequent. The afternoon of Sunday (20Dec2020), he developed sore throat. Yesterday(21Dec2020), he said he could not work because he was still coughing and had a sore throat. His voice was also changing due to the coughing. He was getting better now. The doctor from Employee Health said that the cough was concerning so he got a COVID swab test yesterday(21Dec2020), and today (22Dec2020) it came back positive. This morning (22Dec2020) he had loss of taste and smell. He no longer had sore throat or cough. He had the vaccine before the test. He wanted to know where they were at with information on this. Was this being monitored? How did this happen? Was it possible that the test was a false positive because he had the vaccine prior? He would like someone to give him an answer, if the test was a false positive due to the vaccine? His doctor could not tell if the test was legit a positive because of the vaccine. He was not able to work right now. He did not even know if the COVID was from the vaccine or not. Will he get compensation for this? Will his workplace cover his absences? In the case he went to the hospital, will this be considered a work related or vaccine related issue? The outcome of event soreness at injection site was recovered on 21Dec2020. The outcome of event tested positive for COVID was not recovered. The nurse considered the cough was disabling as this was not part of the symptoms to watch for after getting the vaccine. All of the symptoms currently besides the cough are not serious as of now, but it has put him out of work. The nurse considered all other events as non-serious except for cough (disabling). Information on the lot/batch number has been requested. , Sender's Comments: Based on the information currently available, a lack of efficacy with BNT162B2 in this patient might not be completely excluded.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER- BIONTECH)) (1200)	Yes	None	Permanent Disability	913469-1	Shortness of breath Hives, Fever, chills joint pains. I was Tx in the ER with Pepcid IV Solumedrol IV, Benadryl IV ,Tylenol and IV fluids. I was discharged on prednisone , Benadryl and Tylenol.	None	Eliquis
COVID19 (COVID19 (PFIZER- BIONTECH)) (1200)	Yes	None	Permanent Disability	914496-1	At about 6am after receiving the shot I felt very tender at the injection site almost as if it was bruised. Then over the course of the day I started to feel very itchy all over my body but mainly on my right side. 10pm I got up for work, and could barely move, I'm feeling intense back pain on my lower back on the right side. I can walk but its all very limited motion, I can really only manage by putting all my weight on my left side.	None	None
COVID19 (COVID19 (PFIZER- BIONTECH)) (1200)	Yes	None	Permanent Disability	915612-1	Received my vaccine on December 22nd, 2020 at around 830 Am. That afternoon, about 3 PM, I started to have a reaction. It started with tingling/numbness in my right hand which progressed up my arm into my elbow. About 10 minutes later, it then progressed into my right foot, and my left foot. About 10 minutes after that, I started to get flushed and a neck rash (diagnosed from Dr.). I took Benadryl and Ibuprofen 800mg PO every 6 hours for the next 24 hours. The numbness in my right foot and left foot along with the flushness went away a couple hours later. Although, the numbness in my right hand never went away. It came and went for the next 4 days until December 27th and 28th when it started getting worse. On December 28th evening, it got so bad that I was debating going to the emergency room around 1 am. The numbness and tingling was in my right hand and started shooting up my arm. The nerve pain around my wrist was unbearable. I finally fell asleep and the next morning, it was not nearly as bad, but was still there. The numbness and tingling moved from my right hand mainly to right hand, right foot, right leg, left foot and left hand today (12-30-2020).	None	None

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Permanent Disability	919373-1	noticed twitching in L arm shortly after receiving vaccine, numbness , weakness and pain in arm and shoulder girdle, diagnosed with parsonage turner syndrome by neurologist, currently taking neurontin for pain as steroids not tolerated	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Permanent Disability	919444-1	12/21 had covid vaccine (dose 1). On evening of 12/29 had sudden onset of mild neck pain and significant weakness and numbness of left arm, weak hand grip, clumsiness in hand . Did not improve after trying to shake arm/move around , and took prednisone 40mg oral. Went to ER and had CT Cspine which did not show evidence of cervical pathology. Continued with corticosteroids, sought consultation with PMR and neurology specialists, and steroid dose increased to 60mg/day. Some improvement in strength , but still have diminished sensation and strength in left hand/arm. Unable to perform full job tasks as I am left hand dominant. Likely brachial neuritis / parsonage turner syndrome per both specialists seen. Continuing with corticosteroids at this time, pending bloodwork and OT evaluation	None	Balziva (birth control)
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Permanent Disability	919783-1	On 12/24 at around 10 PM, circulation to my 4th left digit significantly decreased after being outside of my car for around 15 minutes during a temperature of about 50 degrees. I realized when sharp pain was felt at the digit. After about 5 minutes the digit felt numb. I got in my car, turned on the heater, and massaged my finger. Sharp pain was felt again as circulation returned to the digit. The event last approximately 10 minutes from the moment I realized the finger was pale until color returned. This occurred again on 12/27 at around 2 PM as I walked from my car into a store at a temperature of about 40 degrees. This time, discoloration occurred bilaterally on my left 3rd, 4th, and 5th digits and my right 2nd, 3rd, 4th, and 5th digits. The event lasted more than 15 minutes with constant massaging. This has occurred two more times since then, both times occurring bilaterally with minimal exposure to cold.	N/A	TriSplintec Oral Contraceptives
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Permanent Disability	920958-1	felt like she had a stroke; fell down; Pain in leg; itchiness in her head; left leg not functioning normally; This is a spontaneous report from a contactable nurse (reporting for herself). A 51-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EH9899), via an unspecified route of administration in the left deltoid on 21Dec2020 at 10:00 (at the age of 51-years-old) as a single dose for COVID-19 immunization. Medical history was none. There were no concomitant medications. There were no prior vaccinations within 4 weeks prior to the first administration of the suspect vaccine. On 21Dec2020, the patient experienced left leg not functioning normally, which was reported with the seriousness criteria of disability. On 21Dec2020, the patient had itchiness in her head. The patient felt like she had a stroke, fell down and pain in leg on 22Dec2020, which were all reported with the seriousness criteria of disability. The patient called the doctor office and spoke with the doctor on call and was told to use diphenhydramine hydrochloride (BENADRYL). No further details provided. The patient was sent home for 10 days and she was sent back to work. The patient underwent lab tests and procedures which included COVID: negative in Dec2020. The outcome of the events was not recovered. The reported assessed the events related to the suspect product, BNT162B2.; Sender's Comments: The reported events leg dragging, leg pain and fall and suspected stroke were possibly related to the use of first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), due to temporal relationship. However, stroke was not diagnosed. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Emergency Room *	910649-1	"low grade fever; Her blood pressure was high/ still really high/ blood pressure was up; headache; Fifteen to twenty minutes after she received the vaccine she became light headed and dizzy/ light headedness and dizziness; This is a spontaneous report from a contactable nurse (patient). A 36-year-old female patient received BNT162B2 (Lot#: EK5730) via an unspecified route of administration on 17Dec2020 afternoon at single dose in the left arm for COVID-19 immunization. Caller was unable to confirm the manufacturer of the vaccine that she received. It is not written on the card, and she didn't see the vial. The patient medical history was not reported. Concomitant medications included oral contraception pill, but the name was unknown. Fifteen to twenty minutes after she received the vaccine on 17Dec2020 she became light headed and dizzy. She had to catch her breath. She couldn't shake it off. The light headedness and dizziness lasted at that intensity for 10 minutes, but it never went away. They encouraged her to be admitted in the emergency room (ER). She would say that the seriousness of being light headed and dizzy was disabling. Caller didn't remember the exact numbers for her blood pressure. It was 160's over 105. Her heart rate was in the low 100's, around 105. She stayed at the first monitoring station in the vaccine area for 2 hours. They were taking her blood pressure every five minutes. She was given diphenhydramine hydrochloride (BENADRYL) there and lots of water. After 3 hours and she was not improving they called a ""code medic"" that got the medical director and nursing supervisor to come. They encouraged her to go to the ER for continual monitoring. She stayed in the ER for 4 hours and was given meds to help with the blood pressure. She was discharged from the ER home. She was nervous because of all this stemming from the vaccine. She had a low grade fever on 18Dec2020 (Friday) night. Caller stated her work had already reported her reaction. Occupational safety and the medical director are aware. Caller does not have reference number to provide. On 18Dec2020 (Friday) she was not overly concerned because it was the next day. Her blood pressure was high and her heart rate was in the 100's. They monitored her for a couple of hours and she was given a diphenhydramine hydrochloride (BENADRYL). She went to the emergency room (ER) for a few more hours and received additional treatment. They sent her home to be monitored at home. She has been taking her blood pressure every day since and it had not come down. It was still really high. She called her primary care doctor. He was wanting her to start blood pressure for medication it. She was concerned about starting it with the assumption that it was related to the vaccine. She would like to know the right thing to do. It seems safe to take the medicine, but it was unknown that whether it was going to mask the blood pressure and something else be going on. On 18Dec2020 she still had a headache and didn't feel well, but she thought she needed to give it some time. She had been anticipating not to feel well on 18Dec2020 (Friday). On 19Dec2020 she felt better considering she didn't have a headache. On 19Dec2020 (Saturday) her blood pressure was 138/90 and she felt good. Then on 20Dec2020 she had the bad headache and her blood pressure was up. On 20Dec2020 (Sunday) she had a bad headache and her blood pressure was 156/100. She came to work today and her blood pressure had been high all day. She still had a headache and the light headedness continued. The outcome of the event low grade fever was unknown, of other remain events was not recovered.; Sender's Comments: A causal association between BNT162B2 and the event dizziness cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Emergency Room *	911943-1	Adverse reaction post Covid vaccine. Waited for 20 min post vaccine. Experienced S/S Heart palpitations, shortness of breath, tingling in extremities, diaphoretic after leaving clinic observation. Drove back to hospital, escorted by pre surgical testing hospital staff and taken by wheelchair to ED.	None	Lo Loestrin, Hydroxyzine, Folic Acid, Melatonin, Multi Vitamin, and Vitamin D.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Emergency Room *	912785-1	Monitored x 15 min per guidelines. Began to experience SOB and throat swelling, after which pt presented to the ED for tx, dx acute hypertensive urgency with severe hypertension.	unknown	unknown
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Emergency Room *	912826-1	Itching, cough. Given benadryl 50mg and epinephrine 0.3 in vaccine clinic, and taken to ED for further tx.	unknown	unknown

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Emergency Room *	914103-1	10 minutes after receiving vaccination, a significant increase in HR was noted, along with a tingling sensation through out body. Also, scratchy throat was noted. Alert by patient made to staff at vaccination site. Sweating noted and shortness of breath at that time. Epi pen given via L thigh IM. PIV started and benadryl and solumedrol given. Relief of symptoms noted very shortly after Epi administration. Taken to ER for 4 hour observation. Sent home after 4 hours and given prednisone to be taken at home, 50mg daily for 4 days. No further adverse symptoms noted.	none	Serevent Pulmicort
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Emergency Room *	914596-1	Anaphalaxis reaction, stridor an unable to breathe. Happened in 30 seconds	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Emergency Room *	915464-1	10 minutes after receiving vaccine, patient reported numbness across upper lip which progressed to her tongue. Felt tingling and dryness of tongue and swelling. No difficulty breathing or swallowing, no chest pain, no wheezing, no rash, no itching. Taken to ED and given methylprednisolone 125mg IV diphenhydramine 50mg IV, famotidine 20mg PO. Patient improved and monitored x 4 hours with resolution of symptoms. Prescribed prednisone 50mg po x 4 days.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	None	Emergency Room *	915612-1	Received my vaccine on December 22nd, 2020 at around 830 Am. That afternoon, about 3 PM, I started to have a reaction. It started with tingling/numbness in my right hand which progressed up my arm into my elbow. About 10 minutes later, it then progressed into my right foot, and my left foot. About 10 minutes after that, I started to get flushed and a neck rash (diagnosed from Dr.). I took Benadryl and Ibuprofen 800mg PO every 6 hours for the next 24 hours. The numbness in my right foot and left foot along with the flushness went away a couple hours later. Although, the numbness in my right hand never went away. It came and went for the next 4 days until December 27th and 28th when it started getting worse. On December 28th evening, it got so bad that I was debating going to the emergency room around 1 am. The numbness and tingling was in my right hand and started shooting up my arm. The nerve pain around my wrist was unbearable. I finally fell asleep and the next morning, it was not nearly as bad, but was still there. The numbness and tingling moved from my right hand mainly to right hand, right foot, right leg, left foot and left hand today (12-30-2020).	None	None

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Hospitalized	904386-1	Patient had vaccine at 1330 on 12/20. At around 1815 she began experiencing heart palpitations. She presented to the ED and she was found to have a heart rate in the 130s. EKG showed junctional tachycardia. She was given 6mg of adenosine and an EKG was repeated and showed sinus tachycardia. Eventually her heart rate decreased to the 70s-90s. She was noted to have a potassium of 3.4 which was repleted. She was admitted overnight for observation. In the morning her potassium was normal and she remained in sinus rhythm. She was discharged later that afternoon.	potassium 3.4 on day of vaccination	albuterol (VENTOLIN HFA) 108 (90 Base) MCG/ACT inhaler fluticasone NASAL (FLONASE) 50 MCG/ACT nasal spray escitalopram (LEXAPRO) 20 MG tablet
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Hospitalized	904555-1	I had no reaction following the vaccination. The next day I had very mild soreness at the injection site. The next morning (about 36 hours after the vaccination) I woke up with fatigue and a sore throat. I had breakfast and about 10 minutes later I vomited everything (projectile vomiting, no nausea or abdominal pain). An hour later I had episode of severe watery diarrhea (just one episode). Felt very weak so I decided to sit down, stumbled to a chair, and then proceeded to have a syncopal episode with about 4 minutes of seizure like activity (witnessed, I don't remember that part). Decided to go to the ER, where I had labs, EKG, CXR, head CT scan, MRI and EEG. I was admitted for 24 hour observation, all the tests were normal.	No other illnesses at the time of vaccination or one month prior.	Bystolic 5mg once a day Prilosec 20mg once a day One a Day multivitamins
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Hospitalized	905320-1	severe abdominal pain experience 2 days post vaccination of dose 1 of 2. Diagnoses with early acute appendicitis on Friday December 18th and had a laproscopic appendectomy on Saturday December 19th.	None	Norvasc 5 mg PO Daily, Vitamin C 1 tab daily

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Hospitalized	905974-1	Left sided weakness of face, arm and left leg, onset 15 minutes after receiving vaccination Brought immediately to ED, subjective feeling of closing of throat. Given IM epinephrine 0.3mg x 1. Upon evaluation in the ED by tele-neurology consult, she received 88.5mg of alteplase on 12/20/20 at 1721 She was admitted to the Intensive Care Unit on 12/20/20 at 2208 Seen by neurology on 12/12/20 at 1227. Evaluation showed weakness on the left side but is noted that it could be effort-related. Neurologist noted that patient was treated with alteplase; CT angiogram showed no significant blockage or stenosis. Noted that this is could be related to a vasovagal effect, psychogenic or an acute ischemic stroke. As of 12/21/20 at 1615, attending provider noted left-sided paresthesia, left-sided tics and possible transient ischemic attack	None	Nexplanon birth control implant
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Hospitalized	906064-1	Rapid heart beat, difficulty breathing, itching, rash, clamminess, cold sweats, nausea	None.	Birth control, adderall, vitamin b complex, vitamin d, multivitamin and hair skin and nails.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Hospitalized	906910-1	HPI: 56 y.o. male with no pmhx c/o generalized bruising for 2 days, noticed small blood tinged spots generalized. Gradual onset, severe on severity, no alleviating or aggravating factors. Patient denies fevers, chills, N/V/D, abdominal pain. In ER: Platelet <1. Platelet transfusion in ER. Admitted for Thrombocytopenia/ITP	No pertinent past medical history prior to vaccination	No home medications at the time of vaccination or hospital admission
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Hospitalized	907426-1	48 y.o female with history of atrial tachycardia who presents to the ED via EMS for a possible adverse reaction to Covid vaccine. Patient received her Covid vaccine around 1600 today, and soon became diaphoretic, shaky, and lightheaded. She had presented to the emergency department. Currently she denies any chest pain, difficulty breathing, throat swelling, tongue swelling, or any other symptoms currently except for palpitations. 4Allergic Reaction The primary symptoms are shortness of breath. The primary symptoms do not include cough, abdominal pain, vomiting, dizziness or rash. The current episode started 1 to 2 hours ago. The problem has not changed since onset. The onset of the reaction was associated with a new medication. Significant symptoms also include flushing, 48-year-old female with a history of atrial septal defect, status post atrial septal defect repair in 1980. She works as a nurse at Hospital and has been experiencing increasing rapid palpitations associated with chest pain, and hypertension. With her episodes, she experiences marked lightheadedness, dyspnea, and feeling marked anxiety, as well as chest tightness. She received the COVID-19 vaccine today and while waiting in the observation room, she started feeling unwell, with rapid palpitations, associated with lightheadedness and dyspnea. She last had a sustained episode 2 - 3 weeks ago and had presented to ER and Hospital. No syncope. No orthopnea, PND or increased lower extremity swelling. Active Hospital Problems & Diagnosis ? Atrial paroxysmal tachycardia ? History of repair of atrial septal defect & & & 1. Paroxysmal atrial tachycardia in setting of prior atrial septal defect repair - she is having breakthrough episodes through flecainide/digoxin - it is likely her atrial tachycardia is related to her ASD patch. Will hold flecainide/digoxin for now, and try to schedule an ablation during her hospital admission due to highly symptomatic episodes resulting in multiple ER visits. & 2. Acute renal insufficiency - most likely pre-renal - iv fluids started. & 3. Possible COVID-19 vaccine reaction - she probably had an incidental atrial tachycardia episode post vaccine administration, rather than an actual adverse reaction. Continue to monitor.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Hospitalized	907478-1	Seizure (Grand mal)	none	Atorvastatin, Multivitamin, Aspirin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Hospitalized	907616-1	12-22 HPI 53-year-old female with a history of Addison's disease, anaphylactic reaction who presents to the ED complaining of hives and shortness of breath. Patient reports that 3 days ago she received the COVID-19 pfizer vaccine. She reports that since that time she has developed progressively worsening hives on her legs and arms. Approximately 1 hour ago she began to develop shortness of breath and so she presented to the ER. Patient reports a previous history of anaphylactic reactions multiple times. Denies any other acute complaints at this time. MDM Patient came in with shortness of breath and hives. Suspect allergic reaction to the COVID-19 vaccine. Patient had already taken 50 mg of Benadryl. She was given Solu-Medrol and EpiPen. She reported feeling better with improvement in the pruritus. She reports that she has had rebound reaction requiring EpiPen at 24 hours. Given the distance that she lives from adequate medical care and the possibility for recurrent severe reactions, the patient will be hospitalized for further observation. 12-23 Female with history of asthma and addison's had anaphylaxis to covid vaccine. Admitted over night to ensure that she did not rebound. Received IV Dex and this am has had no reoccurrence of hives or shortness of breath. Will discharge home on epiPen, hydrocortisone pm, prednisone bid for 5 days. Return to ER or go to PCP for worsening symptoms.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Hospitalized	907805-1	First night following after vaccine I woke up with chest pain (i though pleuritic) which went away. I had mild body aches and fatigue, chills. next day I experienced chest(again I thought pleuritic) discomfort especially when taking a deep breath. i felt better then had mild fatigue and body aches again. day 3 post vaccine I woke up with discomfort when taking a deep breath with continued discomfort. i felt tired through the day. Then that evening i developed SOB, severe palpitations and chest pain and went to ER. Diagnosis New onset rapid A fib. I was hospitalized and once my work up was finished and I had normal sinus rhythm I was discharged home the next evening.	no	ziac, protonix, loratadine, crestor, multivitamin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Hospitalized	908969-1	Starting that night 12/19/20 at approx 8pm I became nauseous with a 100.8f fever. I felt achy for the 2 days with the fever subsided. On Monday 12/21/20 I was at work (Firefighter) when I started to have palpitations. I was able to obtain a 12 lead EKG right away which showed a ventricular rhythm lasting for approx 5 min. After that I was having multiple PVCs / Ventricular beats. I was taken to Hospital where I was admitted. Over night the rhythm subsided, all my labs were good with other test's being done. I was discharged home. I have not had any other episodes since Monday. I was cleared by our Occ Health Doc who suggested I fill this out.	None	Aspirin 81mg

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Hospitalized	910948-1	Difficulty breathing 5 minutes after receiving first dose of Covid-19 vaccine by Pfizer/BioNTech, small erythematous spots to bilateral arms.	None known	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Hospitalized	910996-1	Patient reports taking Pfizer Covid vaccine and 2 hours after that she reports feeling not well. She recorded that one of the side effects was heart arrhythmias and hence she had her coworker checked her rhythm and she reported that her heart rate was in 180s and hence she was brought to the emergency department for further evaluation. She reports at the time she had palpitations and felt mild lightheadedness and dizziness. She was found to be in SVT with heart rate in the range of 1 80-220 and she received 1 dose of 6 mg Adenoscan after which she converted to normal sinus rhythm. At the time of my evaluation she is in normal sinus rhythm with heart rate in the range of 90-100. She denies any further palpitations. She reports she had chest tightness for the last 3 days which was assumed to be secondary to asthma and for which she was prescribed prednisone. Currently with the prednisone she does not feel any further chest tightness. She denies any chest pain shortness of breath, fever or chills. She reports remote history of arrhythmia following her foot surgery in the past however does not recall what arrhythmia she had at that time. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Hospitalized	914798-1	On Dec. 20, 2020 around 11:30 PM, 2 days after patient received her COVID-19 vaccination, she was found on the bathroom floor , obtunded, very pale, diaphoretic, nauseous, and complaining of severe chest pain. Paramedics was called and patient was transported to the nearest emergency room. According to paramedics, on the way to the ER while patient was in the ambulance, she was noted with a sudden drop in heart rate about 19 beats/minute and have to be given Atropine IV Push, oxygen and was connected to transcutaneous pacing which improves her heart rate. In the ER patient continued to have chest pain and she was given Morphine, Oxygen, Nitroglycerine and Aspirin. IM had an EKG which showed Sinus Bradycardia with a Right Bundle Branch Block. She had serial ekgs, a chest x-ray, laboratory testing which included Troponin. Her first Troponin level came back elevated prompting her hospital admission to Telemetry. Her next 2 Troponin level improved and return to normal range and her chest pain has resolved.. She underwent a Stress Test which came back negative. Patient was admitted for a total of 20 hours in the Telemetry unit with Cardiology consultation before being discharged home last . She was re-evaluated by the cardiologist yesterday which diagnosed her a chest pain of unknown origin.	none	Amlodipine 10 mg daily

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Hospitalized	917497-1	Vaccine given at 7:05am 12:00noon, 5 hours later, I started experiencing severe chest pain, jaw pain and shortness of breath in which EMS was called and I was taken to the hospital. Since then, I lost feeling in my hands and feet, numbness and tingling. I've improved however, during my recovery suffered with spinal pain, shortness of breath, very winded, muscle pain and loss of appetite to especially meat.	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Hospitalized	918034-1	I was 28 weeks and 5 days pregnant when I received the first dose of the COVID19 vaccine. Two days later (12/25/2020 in the afternoon), I noticed decreased motion of the baby. The baby was found to not have a heartbeat in the early am on 12/26/2020 and I delivered a 2lb 7oz nonviable female fetus at 29 weeks gestation. I was 35 years old at the time of the fetal demise and the only pregnancy history for this pregnancy included a velamentous cord insertion that was being closely monitored by a high risk OB. My estimated due was March 12, 2021.	None	Advair, Pulmocort, levothyroxine, pepcid, prenatal vitamins, singular, aspirin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Hospitalized	918770-1	Difficulty breathing: This is a spontaneous report from a contactable pharmacist. A 54-year-old female patient received her first dose of intramuscular BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 22Dec2020 at 04:15 PM at single dose in left arm for COVID-19 immunisation at the age of 54-year-old. Lot number was ELO140. Medical history was unknown, concomitant medications were unspecified. Patient was not pregnant at the time of vaccination. On 22Dec2020 at 04:30 PM, the patient experienced difficulty in breathing, and she was hospitalized for one day. The patient was treated with EPI for the event. The patient was recovering from the event.; Sender's Comments: Based on the comparable temporal association, the Company considers the event difficulty in breathing is possibly related to vaccination with BNT162B2. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Hospitalized	919087-1	Acute Pericarditis. Patient was admitted from 12/27-12/28/2020 at hospital by cardiology team who strongly felt the acute pericarditis was due to the Pfizer Vaccine (Dr. was senior cardiologist).	No illness one month prior to or at time of vaccination	Aspirin daily
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Hospitalized	919129-1	After the 15 min monitoring, I went back to work 15 min later. the left side of my face started tingling which went to a numbing feeling down the left side of my body affecting my neck, shoulder, arm, elbow and up the upper left torso. My face and neck was numb for about 48 hrs and the rest came back to sensation within 24 hrs. D/T the numbness I was admitted into the hospital for a 24hr observation.	no	Losortan HCTZ, Claritin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Hospitalized	920285-1	Anaphylactic reaction requiring two doses of Epinephren to control. Still having issues; other vaccine same date product received; This is a spontaneous report from a contactable nurse (patient). A 54-year-old female patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscularly on right arm at 12:30 PM on 18Dec2020 at single dose for COVID-19 immunization, and first dose of other Pfizer vaccine same date product (other vaccine same date lot number: el9899) on right deltoid on 18Dec2020 for unknown indication. Medical history reported as none. Concomitant medication included vitamin C and colecalciferol (VITAMIN D). The patient experienced anaphylactic reaction at 12:30 PM on 18Dec2020 requiring two doses of epinephren to control. still having issues, resulted in: Doctor or other healthcare professional's office/clinic visit, Hospitalization in Dec2020, days hospitalization: 1. The patient received treatment: 2 doses of epinephrine, solumedrol, benadryl, IV and O2 for event anaphylactic reaction to vaccine. The outcome of anaphylactic reaction was not recovered. Lot/Batch and Expiration date has been requested.; Sender's Comments: The information available in this report is limited and anecdotal and does not allow a medically meaningful assessment of the case. There is a plausible temporal association between vaccines administration and onset of the reported event. It is unclear what is the nature of the vaccine co-administered with BNT162b2. Currently no information is available on the co-administration of the Pfizer-BioNTech COVID-19 Vaccine with other vaccines.	No current illness for this event.	VITAMIN C [ASCORBIC ACID]; VITAMIN D [COLECALCIFEROL]
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Hospitalized	920805-1	palpitations, chest tightness/heaviness, scratchy throat/frequent throat clearing, head heaviness, blurred vision, elevated blood pressure. Evaluated in ED received solumedrol, benadryl. Discharged home and returned to hospital as direct admit due to continued symptoms. Pertinent labs revealed AKI, elevated LFTs. AKI and LFTs improved with IVFs.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Emergency Room *	914798-1	On Dec. 20, 2020 around 11:30 PM, 2 days after patient received her COVID-19 vaccination, she was found on the bathroom floor , obtunded, very pale, diaphoretic, nauseous, and complaining of severe chest pain. Paramedics was called and patient was transported to the nearest emergency room. According to paramedics, on the way to the ER while patient was in the ambulance,she was noted with a sudden drop in heart rate about 19 beats/minute and have to be given Atropine IV Push, oxygen and was connected to transcutaneous pacing which improves her heart rate. In the ER patient continued to have chest pain and she was given Morphine, Oxygen, Nitroglycerine and Aspirin. IM had an EKG which showed Sinus Bradycardia with a Right Bundle Branch Block. She had serial ekgs, a chest x-ray, laboratory testing which included Troponin. Her first Troponin level came back elevated prompting her hospital admission to Telemetry. Her next 2 Troponin level improved and return to normal range and her chest pain has resolved.. She underwent a Stress Test which came back negative. Patient was admitted for a total of 20 hours in the Telemetry unit with Cardiology consultation before being discharged home last . She was re-evaluated by the cardiologist yesterday which diagnosed her a chest pain of unknown origin.	none	Amlodipine 10 mg daily
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Emergency Room *	915690-1	Due Date unknown/6-7 wks pregnant -nausea -Body felt heavy -headache -in & out consciousness -Fatigue, severe -Heart Racing	Anxiety	Maxalt 10mg Elavil 10mg
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Emergency Room *	915813-1	Patient stated he stopped his blood pressure medications 3 days prior to vaccination due to a previous reaction to losartan, a medication he was no longer taking. Patient took aspirin and a MVI on day of vaccination and drank lemon water. Patient developed tingling sensation in his mouth after eating dinner around 18:00. Patient stated he ate tacos with apple cider and noticed tingling after dinner. Patient stated he took two benadryl with no relief. His tongue continued to swell and he took two additional benadryl at 22:00. Once he developed difficulty swallowing he went to the emergency department. Patient presented to the ED with tongue swelling and difficulty swallowing. At 23:57 he was administered 0.3mg of epinephrine IM, diphenhydramine 25mg IV, famotidine 40mg IV, dexamethasone 10mg IV at 0114, methylprednisolone 60mg q8hrs started at 0417, diphenhydramine 25mg q6hrs IV started at 0416, albuterol 2.5mg via neb q6hrs started at 0710	No current illness for this event.	Hydralazine 50mg BID last taken 3 days prior to vaccination Carvedilol 12.5mg BID last taken 3 days prior to vaccination Aspirin 81mg taken 12/30 AREDS multivitamin taken 12/30
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Emergency Room *	917497-1	Vaccine given at 7:05am 12:00noon, 5 hours later, I started experiencing severe chest pain, jaw pain and shortness of breath in which EMS was called and I was taken to the hospital. Since then, I lost feeling in my hands and feet, numbness and tingling. I've improved however, during my recovery suffered with spinal pain, shortness of breath, very winded, muscle pain and loss of appetite to especially meat.	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Emergency Room *	918770-1	Difficulty breathing: This is a spontaneous report from a contactable pharmacist. A 54-year-old female patient received her first dose of intramuscular BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 22Dec2020 at 04:15 PM at single dose in left arm for COVID-19 immunisation at the age of 54-year-old. Lot number was EL0140. Medical history was unknown, concomitant medications were unspecified. Patient was not pregnant at the time of vaccination. On 22Dec2020 at 04:30 PM, the patient experienced difficulty in breathing, and she was hospitalized for one day. The patient was treated with EPI for the event. The patient was recovering from the event.; Sender's Comments: Based on the compatible temporal association, the Company considers the event difficulty in breathing is possibly related to vaccination with BNT162B2. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Emergency Room *	919129-1	After the 15 min monitoring, I went back to work 15 min later. the left side of my face started tingling which went to a numbing feeling down the left side of my body affecting my neck, shoulder, arm, elbow and up the upper left torso. My face and neck was numb for about 48 hrs and the rest came back to sensation within 24 hrs. D/T the numbness I was admitted into the hospital for a 24hr observation.	no	Losortan HCTZ, Claritin

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	1 day	Office Visit *	920225-1	Anaphylactic reaction requiring two doses of Epinephren to control. Still having issues; other vaccine same date product received; This is a spontaneous report from a contactable nurse (patient). A 54-year-old female patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscularly on right arm at 12:30 PM on 18Dec2020 at single dose for COVID-19 immunization, and first dose of other Pfizer vaccine same date product (other vaccine same date lot number: el8989) on right deltoid on 18Dec2020 for unknown indication. Medical history reported as none. Concomitant medication included vitamin C and colecalciferol (VITAMIN D). The patient experienced anaphylactic reaction at 12:30 PM on 18Dec2020 requiring two doses of epinephren to control, still having issues, resulted in: Doctor or other healthcare professional office/clinic visit, Hospitalization in Dec2020, days hospitalization: 1. The patient received treatment: 2 doses of epinephrine, solumedrol, benadryl, IV and O2 for event anaphylactic reaction to vaccine. The outcome of anaphylactic reaction was not recovered. Lot/Batch and Expiration date has been requested.; Sender's Comments: The information available in this report is limited and anecdotal and does not allow a medically meaningful assessment of the case. There is a plausible temporal association between vaccines administration and onset of the reported event. It is unclear what is the nature of the vaccine co-administered with BNT162b2. Currently no information is available on the co-administration of the Pfizer-BioNTech COVID-19 Vaccine with other vaccines.	No current illness for this event.	VITAMIN C [ASCORBIC ACID]; VITAMIN D [COLECALCIFEROL]

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	2 days	Hospitalized	910959-1	33 y.o. female with no significant past medical history except for obesity who has been working as a nurse in the emergency room department in our hospital and today he received COVID-19 vaccine and 30 minutes later patient started having increased saliva, cold hands and feet, left-sided pressure-like headache and some numbness in his legs at the same time he suddenly started talking only in first language and lost his ability to speak in second language. He understand second language but replying first language stating that he is talking in second language. On exam he was alert oriented confused by people not understanding his second language stating that his numbness and cold feeling in the hands and feet have improved. Initially patient received 10 mg of Decadron for possible allergic reaction he had a head CT scan that was negative and his labs were remarkable only for hypokalemia. Patient had no prior history of any neurological symptoms he was advised admission to the hospital for observation. Patient symptoms resolved next day, he is alert oriented able to communicate in second language he had a head MRI and head neck MRA that came back negative and had an EEG that showed no seizure activities. Patient was seen in neurology consultation who felt that patient most likely had an episode of migraine headache. Patient is going to be discharged home and to have a follow-up with his primary care physician next week.	No	No
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	2 days	Hospitalized	911636-1	I received my vaccine on 12/22 around noon. I woke up at 4am this morning 12/25 with tingling in my lips and tongue, in addition to the left side of my face being swollen. Not entirely sure what these side effects are from exactly but thought it best to report my experiences I was hospitalized on 12/25 to 12/26 because my reaction did get worse. I was experiencing numbness on the left side of my body and swelling, numbness, and redness on the left side of my face as well. The hospital didn't really give any explanations but I'm only now have mild swelling and numbness on the left side of my face. Everything else has resolved at this point in time.	No current illness for this event.	Zyrtec daily. Orilissa daily.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	2 days	Hospitalized	912669-1	Chest pain, short of breath. Morphine, sublingual Nitro, IV Nitro drip & Heparin drip	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	2 days	Hospitalized	913764-1	About 3 am after the injection I woke up with severe chest pains and headache and went to the ER. I was admitted for 2 days and was released with a prescription of Isosorb Monoox, Metoprolol, aspirin which is used as a blood thinner. The diagnosis and prognosis was severe migraines and cardiovascular disease.	migranes, diabetes hypertension	Vit. D3, Magnesium, Acetaminophen, B12, Rosuvastatin, Trazodone, fatomadien, alloturinol, propranolol, losartan
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	2 days	Hospitalized	918211-1	"Pfizer-BioNTech COVID-19 Vaccine EUA - Patient with history of anaphylaxis requiring intubation to benzonatate. Patient answered "no" to questionnaire about allergic reactions prior to vaccination. 11 minutes after vaccination, patient reported tingling of lips and swelling of face. Developed hoarseness. SWAT was called and patient given benadryl and taken to ED (1055). Patient received steroids and H1/H2 blockers in addition to epinephrine. Patient brought to ICU for monitoring. Patient continued on therapy and was discharged 1/2 at 1113. Patient returned to ED on 1/3 at 1558 with macular papular rash on leg, chest and back with itching on eyelids and face. No respiratory involvement. Patient given benadryl and prednisone and discharged from ED at 2016."	Unknown	Unknown
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	2 days	Hospitalized	919436-1	Bell's palsy, right side of face is numb, with difficulty closing eyes, smiling, raising eyebrows, eating, drinking, swallowing.	Strained neck resulting in numbness in extremities. This and facial numbness prompted me to see my PCP who urged me to go to the ER immediately. I went to Medical Center's ED, after which I was admitted to the neuro ICU for a possible brain bleed, which after an MRI was determined to be a cavernoma.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	2 days	Hospitalized	920719-1	starting to feel lethargic and weak. Had menses with increased blood. Called physician to have blood work done to see if I was experiencing anemia. Blood work complete on 12/31/2020. On 1/3/2021, I woke up with blood blisters all over the inside of my mouth and petechia on my trunk and bilateral upper and lower extremities. I called my primary physician to report the symptoms. He suggested to go to the ER if my symptoms worsened. Later that evening I started with a nose bleed and did go to the ER. Upon arrival to the ER, my platelet count was 9. I was admitted to the hospital and diagnosed with ITP.	none	none
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	2 days	Hospitalized	923540-1	Anaphylaxis Narrative: 12/22 received COVID-19 vaccine at 1209 and developed SOB at 12:15. Took her own albuterol inhaler without relief. Transported to ED, PE: red hands with swelling, throat and lip swelling with difficulty swallowing. Later developed headache and dizziness then tachypnea and stridor. Meds given - See section 5 PLUS epinephrine IM and infusion @ 0.05 mcg/kg/min, Alb and Ipratropium nebs, racemic epi nebs. Admitted to the hospital on 12/22 and still hospitalized at the time of this report on 12/23. She remains on an epinephrine drip and was given methylprednisolone 125 mg IV x 2. No previous history of anaphylaxis. History of Reye's syndrome as a child when given aspirin.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	2 days	Emergency Room *	903260-1	Approximately 10 minutes after vaccine administration, patient reported wheezing and coughing. Patient received epinephrine IM, IV Benadryl, IV solumedrol and racemic epinephrine SVN. Patient never developed a rash, hypotension, swelling of the lips, mouth or tongue, other GI side effects. Per ER attending and admitting physician, this reaction seems to be a clear exacerbation of the patient's tracheomalacia. The patient was not responsive to racemic epi SVN as opposed to IM epi. Patient admits that psychological stress may have been a component of her symptoms. The admitting physician does not consider this to be an anaphylactic reaction to the vaccination.	No current illness for this event.	Acetaminophen, Albuterol, Excedrin Migraine, B complex vitamins tab, Cholecalciferol, Cyclobenzaprine, Duloxetine Dr, Esomeprazole, Norco, Analpram-HC rectal cream, hydroxyzine hydrochloride, ipratropium nasal spray, Duoneb, levothyroxine.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	3 days	Hospitalized	910602-1	"pancreatitis; acute lower abdominal pain; This is a spontaneous report from a contactable pharmacist. A 46-year-old non-pregnant female patient received the first dose of the bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number: EJ1685), intramuscularly on 18Dec2020 at 08:00 (as reported) at 46-years-old at a single dose for COVID-19 immunisation. The patient medical history was not reported. The patient had no known drug allergy (NKDA). Concomitant medications included acetaminophen (MANUFACTURER UNKNOWN), propranolol (MANUFACTURER UNKNOWN), sertraline hcl (MANUFACTURER UNKNOWN), sertraline hydrochloride (ZOLOFT); all taken for an unspecified indication from an unspecified date to an unspecified date (which were received within two weeks of vaccination). On 18Dec2020 at 17:00, the patient experienced pancreatitis and acute lower abdominal pain; which required hospitalization and were assessed as medically significant. The patient was hospitalized for pancreatitis and acute lower abdominal pain for 3 days on unspecified dates. The clinical course was reported as follows: The patient received the vaccine "" at some point in the AM on 18Dec2020 (as reported)."" That evening, the patient presented to the emergency department (ED) with acute lower abdominal pain. The patient was diagnosed with pancreatitis and was admitted overnight. It was unknown if the patient received any other vaccines within four weeks prior to the COVID vaccine. Prior to the vaccination, it was unknown if the patient was diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. Therapeutic measures were taken as a result of pancreatitis and acute lower abdominal pain. The clinical outcome of the events was recovering.; Sender's Comments: The information currently provided is too limited to make a meaningful medical assessment. Other than a temporal association , there is no evidence or argument to suggest a causal relationship between BNT162B2 and the events pancreatitis and acute lower abdominal pain. The events are likely due to an underlying medical condition. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate."	No current illness for this event.	ACETAMINOPHEN;; SERTRALINE HCL; ZOLOFT
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	3 days	Hospitalized	910626-1	resp distress; This is a spontaneous report from a non-contactable consumer (patient). An elderly male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at 16Dec2020 12:00 pm at single dose for covid-19 immunization. Vaccine location was right arm and it was the first dose. The patient medical history and concomitant medications were not reported. No known allergies. Patient was not diagnosed with COVID-19 prior to vaccination. The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced respiratory distress on 19Dec2020, he was hospitalized for three days. Patient received treatment for the adverse event. Since the vaccination, the patient has been tested for COVID-19 with nasal swab on 19Dec2020, it was negative. The action taken in response to the events for BNT162B2 was not applicable. The outcome of events was unknown. The event was serious, the seriousness criteria was Caused/prolonged hospitalization. No follow-up attempts are possible; information about lot/batch number cannot be obtained.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	3 days	Hospitalized	918200-1	Pfizer-BioNTech COVID-19 Vaccine EUA - Patient witnessed another patient with syncope prior to her injection. She was already anxious about receiving vaccination and this increased her anxiety, though she proceeded with immunization. Patient was in 15 min observation window in a chair and began to feel light-headed like she may pass out. A SWAT was called. With RN assistance, patient was lowered to the floor, with no loss of consciousness. Patient was pale and reported anxiety, racing /pounding heart, and felt hot with facial flushing. Patient was transferred to ED and was noted to be tachycardic (120s), but dropped to 80s. She noted that this episode felt different than her prior syncopal episodes associated with anemia. Patient was observed for 5 hours and discharged to home. Patient returned to ED roughly 2.5 hours later complaining of continued dizziness and unsteady gait. Patient was pale and anxious. Patient reported had not eaten/drunk enough during her shift and received vaccine immediately post a stressful shift. Additionally, patient witnessed another patient have syncopal episode prior to her receiving her vaccine which made her anxious. Patient was given IV fluids and had electrolytes replacement. Patient additionally received diazepam. Patient was discharged at 2358 on 12/23. Patient returned to ED on 12/24 at 0239 complaining of near syncope and lightheadedness. Patient had tachycardia and self-reported palpitations. Received IV fluids and observation on telemetry with no rhythm disturbance. Patient discharged 1428 on 12/24. On 12/29, patient returned to ED at 0326 for continued dizziness, fatigue and near syncope. Was admitted for cardiac evaluation. Noted to have unprovoked tachycardia and was discharged with a Halter Monitor to evaluate cardiac symptoms. patient was discharged 12/31 at 1619	Unknown	Unknown

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	3 days	Hospitalized	918758-1	Small bowel obstruction with diffuse bowel and pelvic lymphadenopathy 36 hours after injection; Small bowel obstruction with diffuse bowel and pelvic lymphadenopathy 36 hours after injection; This is a spontaneous report from a contactable physician (patient). A 61-years-old female patient (not pregnant) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number: EH9899), intramuscularly on 21Dec2020 12:30 to at single dose on left arm for COVID-19 immunization in hospital. Medical history included crohn's disease. No known allergies. Concomitant medications within 2 weeks of vaccination included estradiol, progesterone, colestipol hydrochloride (COLESTID), ustekinumab (STELARA), cyanocobalamin (B12). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced small bowel obstruction with diffuse bowel and pelvic lymphadenopathy 36 hours after injection on 22Dec2020 22:00 with outcome of recovered in Dec2020. The adverse events resulted in emergency room/department or urgent care, hospitalization for 3 days. Therapeutic measures were taken as a result of event included inpatient observation, nothing by mouth (reported as NPO), intravenous fluids. No COVID prior vaccination. COVID test nasal swab was negative on 23Dec2020 post vaccination. It was not reported as serious.; Sender's Comments: There is not a reasonable possibility that reported events small bowel obstruction and lymphadenopathy are related to BNT162B2 vaccine. The patient had underlying Crohn's disease, which put patient at risk of developing the event. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	3 days	Emergency Room *	904719-1	Day 1: palpitations, dizziness Day 2: headache, redness, swelling, itching on vaccination site; GI disturbance Day 3: vaccination arm had paresthesia, heaviness, almost stroke-like symptoms; the symptoms started suddenly ** treated in the ER; IV steroids- for possible allergic reaction; tpa- for the stroke-like signs; halfway through the tpa, I felt an improvement with the arm	vertigo	hydroxyzine, Xyzal, nasal spray, vitamins C, D
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	3 days	Emergency Room *	910602-1	"pancreatitis; acute lower abdominal pain; This is a spontaneous report from a contactable pharmacist. A 46-year-old non-pregnant female patient received the first dose of the bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number: EJ1685), intramuscularly on 18Dec2020 at 08:00 (as reported) at 46-years-old at a single dose for COVID-19 immunisation. The patient medical history was not reported. The patient had no known drug allergy (NKDA). Concomitant medications included acetaminophen (MANUFACTURER UNKNOWN), propranolol (MANUFACTURER UNKNOWN), sertraline hcl (MANUFACTURER UNKNOWN), sertraline hydrochloride (ZOLOFT); all taken for an unspecified indication from an unspecified date to an unspecified date (which were received within two weeks of vaccination). On 18Dec2020 at 17:00, the patient experienced pancreatitis and acute lower abdominal pain; which required hospitalization and were assessed as medically significant. The patient was hospitalized for pancreatitis and acute lower abdominal pain for 3 days on unspecified dates. The clinical course was reported as follows: The patient received the vaccine "" at some point in the AM on 18Dec2020 (as reported)."" That evening, the patient presented to the emergency department (ED) with acute lower abdominal pain. The patient was diagnosed with pancreatitis and was admitted overnight. It was unknown if the patient received any other vaccines within four weeks prior to the COVID vaccine. Prior to the vaccination, it was unknown if the patient was diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. Therapeutic measures were taken as a result of pancreatitis and acute lower abdominal pain. The clinical outcome of the events was recovering.; Sender's Comments: The information currently provided is too limited to make a meaningful medical assessment. Other than a temporal association , there is no evidence or argument to suggest a causal relationship between BNT162B2 and the events pancreatitis and acute lower abdominal pain. The events are likely due to an underlying medical condition. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate." COVID19 (COVID19 (PFIZER- BIONTECH)) (1200)	Yes	3 days	Emergency Room *	918200-1	Pfizer-BioNTech COVID-19 Vaccine EUA - Patient witnessed another patient with syncope prior to her injection. She was already anxious about receiving vaccination and this increased her anxiety, though she proceeded with immunization. Patient was in 15 min observation window in a chair and began to feel light-headed like she may pass out. A SWAT was called. With RN assistance, patient was lowered to the floor, with no loss of consciousness. Patient was pale and reported anxiety, racing /pounding heart, and felt hot with facial flushing. Patient was transferred to ED and was noted to be tachycardic (120s), but dropped to 80s. She noted that this episode felt different than her prior syncopal episodes associated with anemia. Patient was observed for 5 hours and discharged to home. Patient returned to ED roughly 2.5 hours later complaining of continued dizziness and unsteady gait. Patient was pale and anxious. Patient reported had not eaten/drank enough during her shift and received vaccine immediately post a stressful shift. Additionally, patient witnessed another patient have syncopal episode prior to her receiving her vaccine which made her anxious. Patient was given IV fluids and had electrolytes replacement. Patient additionally received diazepam. Patient was discharged at 2358 on 12/23. Patient returned to ED on 12/24 at 0239 complaining of near syncope and lightheadedness. Patient had tachycardia and self-reported palpitations. Received IV fluids and observation on telemetry with no rhythm disturbance. Patient discharged 1428 on 12/24. On 12/29, patient returned to ED at 0326 for continued dizziness, fatigue and near syncope. Was admitted for cardiac evaluation. Noted to have unprovoked tachycardia and was discharged with a Halter Monitor to evaluate cardiac symptoms. patient was discharged 12/31 at 1619	Unknown	Unknown

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	4 days	Hospitalized	918783-1	"left sided weakness; it has weakened his heart; stutter; severe stroke like symptoms; Ventricular tachycardia/help keep his heart rate at bay; Loss of balance; extreme numbness and tingling in left hand and foot; tingling in left hand and foot; oral motor impairment; mouth weakness and not coordinated/mouth is fatigued easily; Issues finding words and trouble speaking; Issues finding words and trouble speaking; Ejection fraction down to 25%; The initial case was missing the following minimum criteria: adverse event. Upon receipt of follow-up information on 20Dec2020, this case now contains all required information to be considered valid. This is a spontaneous report from a contactable other healthcare professional (HCP). A 29-years-old male patient received bnt162b2 (lot number: EJ1685), intramuscular (deltoid left) on 21Dec2020 at 05:30 at 0.3 mL single (first dose) for Covid. Medical history was reported as ""none"". Concomitant medications were not reported. The patient previously received Flu vaccine in Oct2020 for immunization. The patient is an Occupational Therapist, and he called to report an adverse event that he experienced with the first dose of the COVID Vaccine. He received the vaccine last Monday, 21Dec2020 at 5:30AM before his shift at work, then 20 minutes later, he was having severe stroke like symptoms. He experienced severe left sided weakness, loss of balance, extreme numbness and tingling in his left hand and foot, he had issues finding his words and he couldn't speak, and he had an oral motor impairment where his mouth was weak and not coordinated. The	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
					<p>staff at the hospital did a neurological exam on him, and he failed, so he had to go to the emergency room (ER). The patient added that he was already in the hospital when this happened, and the ER doctors suspected that he had a CVA, and they gave him TPA to prevent any permanent brain damage and it worked. The patient then added that due to the shock of this whole event, from everything that happened, it has weakened his heart. Reportedly, he is a healthy 29 year old man, with no preexisting conditions, and he works out, and he has no heart conditions, but he had to get a cardiology follow up a few days after he got the vaccine, because he started going in to Ventricular Tachycardia, which he had never had in his life. So, the doctors at the hospital went ahead and did an Echocardiogram and an EKG, and he was told that his Ejection Fraction is down to 25%. He stated his heart is so weak, that he cannot work right now, but the structure of his heart is fine and has not had any damage. The hospital staff thought that maybe the patient had a chronic heart issue that he just did not know about, and that the stress of this event maybe made it kick into overdrive, but he states that the cardiologist said that was not the case, because the structure of his heart is fine, and the only thing they can see is that the heart is pumping weak. One physician even suggested that due to the shock of the event, he might have Takotsubo Cardiomyopathy, which is a broken heart, but because the structure of his heart is okay, it should be reversible. He stated that he is hoping he will heal up good, because he is young and has no pre-existing conditions. He added that his heart is in such a state right now; he has to wear an external defibrillator. The patient stated that all these happened about 20 minutes after he received the vaccine, and he was admitted to the hospital from 21Dec2020 to 25Dec2020. His neurological symptoms have resolved except that he has a stutter that he did not have before and his mouth is fatigued easily, so he has to slow down when he is eating, but now he can eat regular for the most part. The patient confirmed that he was not specifically prescribed the product; it was administered to him at his place of work, but it was optional. He stated he considered how he is working with COVID patients every day, and given the circumstance, he thought that it would be a best practice for him to get the vaccine. He had not gone to his primary care doctor in a while because he had been fine and healthy, but he called them and found out that his primary care had retired, so he has to find a new one now. Regarding the issues finding words and trouble speaking, he stated that he has improved, but it is still ongoing, he is just stuck in a plateau zone. With the Ventricular Tachycardia, he stated that this is an ongoing issue, as he has to wear the life vest even though he has no need to activate it yet. He did have one minor bought of the VTach, but because he is a therapist, he knows how to take care of it with relaxation techniques, he knows how to manage it. He had one bought of VTach the evening prior, but he was able to get it under control. The doctors have him on medication to help keep his heart rate at bay. He has never had to use medication before and is on the following medications to help keep his heart rate at bay: Metoprolol 25mg one tablet once daily by mouth and Lisinopril 5mg one tablet once daily by mouth. The VTach has improved, it was good enough he was able to discharge home, but it is still a concern. His cardiologist said that, basically his hope, is that once his body recover from the whole shock of everything, then his ejection fraction will heal, and his heart will heal. He again stated that the doctor told him that the structure of his heart is perfectly fine; he has thick walls in his heart, no leaking valves, and the heart was not conducting any abnormal signals. The doctor just said that right now, his heart is super weak and that it is an acute problem. With the Takotsubo Cardiomyopathy, he states that two doctors mentioned this diagnosis, but he confirmed that he was not actually diagnosed with this issue, he was just diagnosed with Ventricular Tachycardia. The outcome of the ejection fraction down to 25% was unknown to the patient at this time as he has not had another EKG or echocardiogram, but the cardiologist told him that the cardiologist expects that this will not be resolved quickly anyway. The patient confirmed that he did not receive any other vaccines on the same day he received the COVID vaccine. The only other vaccine he had this year was the flu vaccine which he got back in Oct2020. He has gone on to his online portal and there are the bloodwork results and all the imaging results on there from his CTs and MRIs, but he did not see the EKG or Echocardiogram results yet. He does not have this pulled up at this time, but he does have access to this stuff and can provide it later, if requested. He is curious about the next steps from here to how his case is processed. He is also curious if this information would help Pfizer make modifications to the vaccine if it is found that a lot of people are having the same reaction as he did. He is also wondering, given his situation, that probably he is not going to get the second dose, for his safety, but he is wondering what percentage of effectiveness the first dose does having just covered. The events left sided weakness, loss of balance, extreme numbness and tingling in left hand and foot resolved on 25Dec2020; severe stroke like symptoms and oral motor impairment; mouth weakness and not coordinated/mouth is fatigued easily resolved in 2020. The events ventricular tachycardia/help keep his heart rate at bay and issues finding words and trouble speaking were resolving, stutter had not resolved while the outcome of the events it has weakened his heart, and ejection fraction down to 25% was unknown.; Sender's Comments: The reported information is unclear and does not allow a meaningful assessment of the case. It will be reassessed upon receipt of follow up information. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate."</p>

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	4 days	Emergency Room *	915928-1	Started feeling a reaction immediately after the vaccine, felt blurred vision, dizziness, racing heartbeat, chest rash and face, itching all over, difficulty swallowing, tongue tingling and wheezing. Sent to ED. EPT and Benadryl. 1800 Went to see her in the ED, room 33. She has red rash to neck, shaky hands itching to neck and chest. ED Dr to discharge, she stated husband to pick her up and she will follow up with OH tomorrow. ----- RN ED gave her Epinephrine 0.3 mg, Methylprednisolone 125mg, Diphenhydramine HCL 50 mg, Zofran 4mg, Lorazepam 1 mg, Hydroxyzine HCL 50 mg Sumatriptan 6mg , Discharge from ED at 1902 - ----- RN 12/29/2020 1715 called to check on patient. left voicemail for her to call OH. ??????..? 12/29/2020 1838 left voicemail for patient to call OH. ?????????????????? 12/30/2020 2030 spoke with her. Tuesday 12/29 3pm-4pm dizziness, confusion, sob. Wheezing. Ambulance called. Hospital admitted. Intubated for less than 24 hours. Breathing treatments, epi drip. Now just on steroids and walking around and feeling better. Still admitted at hospital. Hoping discharged tomorrow. ----- RN	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	4 days	Emergency Room *	916742-1	Within 15 minutes of receiving the vaccine I began to get very itchy and blotchy with a hoarse voice. The paramedic downstairs walked me up to the emergency room. I was treated with medications to help calm the itching and burning feeling. By 940 I went anaphylactic and had several doses of epinephrine to help calm this. I continued to have rashes and the feeling of my throat closing. I was transferred by ambulance to medical center in the ICU. I am still here and have had two toner anaphylactic episodes since. I have been on a epi drip, steroids, famotidine, Ativan and Benadryl. I also had a picc like placed.	None	Women's gummy vitamin Biotin Vitamin d

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Death	921175-1	Resident received Covid Vaccine, noted after 30 mins with labored breathing BP 161/77, HR 116, R 38, T 101.4,	CHF, COPD, DM, heart failure, anemia, sleep apnea	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Death	926462-1	Patient developed hypoxia on 1/4/2021 and did not respond to maximal treatment and passed way on 1/5/2021	dementia, Upper gastrointestinal bleed	Lorazepam, pantoprazole, miralax, senna plus, carbidopa-levodopa, metoprolol, mirtazipine, quetiapine
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Death	926568-1	patient declined 12/30/2020 and was transferred to hospital where he did not respond to treatment and passed away 1/4/2020	chronic medical problems as noted below	alprazolam, amlodipine, ASA, clobazam, adair, lamotrigine, ,losartan, metoprolol,omprazole,simvastatin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Life Threatening	907101-1	patient felt slightly nauseated at 10 minutes after injection, then developed slight sweating; BP 160/81; 83 at 5:45 and then 158/87 with HR 82 at 5: 52 pm. Her lungs were clear, she was speaking in full sentences and was denying any chest pressure, her usual sense of asthma exacerbation. At 6:05 it was 164/83 with HR 79 and patient developed a dry cough; we decided to have her wait just a bit longer, then cough worsened, so at 6:25, decision was made to have patient seen in ER for further assessment, and en route in wheelchair to ER the dry cough became persistent, spasmodic and patient was unable to speak. Epi-Pen was injected in right mid thigh, and patient transported to ED urgent eval. She noted immediate palpitations, and slight improvement of breathing, was able to speak in four word sentences. On arrival to the ED, patient was administered Duonebs, Albuterol nebulizer, IV Benedryl, IV Solumedrol; CXR was obtained, with results pending. Patient was sent to observation for ongoing monitoring and assessment of breathing. at 6:30 PM in the ER, she	had been feeling slightly under the weather two weeks ago; no current asthma exacerbation, but has very labile asthma	Singulair, advair, Duonebs, dupixent, albuterol, zyrtec, chlorpheniramine; wellbutrin, Sertraline;
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Life Threatening	909720-1	12/23- began to experience intermittent right lower quadrant pain in the morning, fever of 100.4 F in the evening which subsided with ibuprofen. 12/24- no fever noted but intermittent right lower quadrant pain continued, seen at the Health Clinic, sent to Hospital ER for CT scan, diagnosed with appendicitis, appendectomy performed.	None	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Life Threatening	911511-1	anaphylaxis; This is a spontaneous report from a contactable physician reporting on behalf of patient. A patient of unspecified age and gender received single dose of BNT162B2 (batch/lot number and exp date not reported), via an unspecified route of administration on an unspecified date for immunisation. The patient's medical history and concomitant medications were not reported. On an unspecified date, the patient experienced anaphylaxis with a very protracted course requiring an epi dose for 4.5 days and was still in the ICU (date/s unspecified) following administration of the COVID vaccine. The physician would like to use a drop of leftover vaccine from one of the vials to do a future skin test after the patient is stable. They were unsure if they needed permission as this was standard practice in allergy to test afterwards but wanted to check in with the company. The outcome of event was unknown. Information about batch/lot number has been requested. Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of anaphylaxis cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Life Threatening	912574-1	Rushed to ER. Has now been tubed and put into the ICU and has had full-cardiac arrest less than 24 hours after receiving the vaccine.	COVID-19 positive on 12/4/2020. Was still symptomatic at last check	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Life Threatening	912602-1	Hospitalized 12/29, has now been tubed and put into the ICU	COVID-19 positive 11/30 with fever, sore throat, dyspnea and difficulty breathing	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Life Threatening	920224-1	had a positive COVID test; had a positive COVID test; O2 Saturation of 80% / Hypoxia; shortness of breath; He has a CT scan which showed extensive infiltration in the lungs; muscle pain; chills; body aches; low grade fever; cough; This is a spontaneous report from a contactable physician (pulmonary medicine). This physician reported similar events for 2 patients. This is 1st of 2 reports. A 35-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for covid-19 immunization. There were no medical history and concomitant medications. Caller stated that his close friend who was ER physician (front line worker) and within 24 hours after receiving the COVID vaccine, developed COVID or symptoms of COVID. Patient received the COVID vaccine on 18Dec2020 and the same night patient started with a low grade fever, body aches, chills, muscle pain, shortness of breath, cough, O2 saturation of 80% (hypoxia) and was in the intensive care unit now. Patient swore this was related to the vaccine. This patient tested positive for COVID. He had a CT (computerised tomogram) scan which showed extensive infiltration in the lungs in Dec2020. Patient was admitted to the hospital on 24Dec2020 and then was moved to the ICU 2-days later, on 26Dec2020. Caller thought patient had a positive COVID test at another hospital. Caller did know that tested positive at the current hospital on 26Dec2020 which was done to confirm the previous positive test. Caller thought patient had his first positive COVID test either the same day or the next day after receiving the vaccine. Event of O2 Saturation of 80% / hypoxia was reported as hospitalization from 24Dec2020 and life threatening; infiltration in the lungs and shortness of breath caused hospitalization from 24Dec2020, muscle pain, chills and positive COVID test was reported as medically significant; and other events were reported as non-serious. Outcome of O2 saturation of 80% / hypoxia and shortness of breath was not recovered, outcome of cough was recovering; and outcome of other events were unknown. Information about lot/batch number has been requested. ; Sender's Comments: Based on the information currently available, a lack of efficacy with suspected vaccine BNT162B2 in this patient cannot be completely excluded. Linked Report(s) : US-PFIZER INC-2020519020 same reporter/drug , different patient/AE.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Life Threatening	920367-1	Patient (myself) had anaphylactoid reaction to the vaccine and required IV soluacortef, IV Benadryl and Pepcid, and required hospitalization x 24 hours	No current illness for this event. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	904264-1	Patient presented to the emergency department at 8:45pm on 12/18/20 with lower abdominal pain, nausea, vomiting, and constipation that started approximately 2 hours prior to presentation, at approximately 6:45pm. Her labs were significant for a lipase of > 6000 IU/L, and a CT scan of her abdomen/pelvis was done that demonstrated evidence of acute pancreatitis. Given the fact that she does not have a history of heavy alcohol use, with normal triglycerides and no evidence of gallstones on her current admission, and no recent gastroenterology procedures, there is no clear etiology of her pancreatitis; concern for post-vaccination pancreatitis. The patient is currently admitted to the hospital, on hospital day #1 of her current condition.	No acute illnesses at time of vaccination, unknown up to one month prior	Propranolol 60mg ER daily Sertraline 100mg daily
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	905345-1	Patient received Pfizer COVID 19 vaccine last Thursday 12/17. Admitted today (12/21) with bleeding and low platelet count - working up for ITP, TTP. Given recency of vaccination and no known contributory allergy or medical history, physician thought potentially associated with vaccination.	No known past medical history	None reported by patient
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	905774-1	Nurse reports that patient had no problems after receiving vaccination. Patient went home and EMS was called early the next morning and team administered vaccination was contacted physician that the associate works for stating the patient had a heart attack.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	906132-1	waves of heat feeling; tachycardia; chest tightness; This is a spontaneous report from contactable physician via Pfizer Sales Representative. A 50-year-old female patient received bnt162b2, via an unspecified route of administration in 2020 at single dose for immunization. The patient's medical history and concomitant medications were not reported. The patient experienced waves of heat feeling, tachycardia, chest tightness 15 min after receiving the vaccine in 2020. Patient received several doses of steroid and was kept overnight in hospital and recovered. The outcome of events was recovered in 2020. Information on the Lot/Batch number has been requested.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, waves of heat feeling, tachycardia, chest tightness, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this reviews well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	906282-1	Given the vaccine at 712 pm on 12/20/20. At approximately 715 pm, she began to clear her throat and then became unable to speak, followed by audible wheezes and short, shallow breaths. At 1923, Epinephrine was administered. At 1928, she was able to speak again and was transported to the ED. The patient reports after arrival to the ER, the symptoms returned. She was given PO Benadryl, followed by IV Benadryl, and then a 2nd dose of Epinephrine. She was admitted to the ICU for observation.	No current illness for this event.	IVIG, Mestinon, Lisinopril, Immodium, Advil, Imuran, Baclofen
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	906318-1	57-year-old female history of hypertension, hyperlipidemia, type 2 diabetes, COPD, subsegmental PE is not on anticoagulation, multiple cardiac stents presenting with greater than 12 hrs of worsening left-sided chest pressure, headache and shortness of breath. Patient takes a daily aspirin and had no improvement of symptoms with her at-home nitroglycerin. Here afebrile, HTN, remaining vitals wnl. Non-toxic, in moderate distress 2/2 to pain. EKG with minimal ST depressions in leads II and III. Will plan for CXR and labs. Pt given zofran and morphine for pain control. Will give additional aspirin for total 324 mg in last 24 hrs. On re-evaluation, pt with mild improvement in pain. Troponin elevated at 0.18, remaining labs wnl. At this time concerned for NSTEMI, pt treated with 1 mg/kg of Iovenox and MOD consulted for admission. MOD evaluated pt and cardiology was consulted. Given concerning PMHx and current hx of chest pain with findings consistent with NSTEMI, cardiology at recommended likely transfer for cardiac cath. Will pend repeat troponin and EKG for dispo decision.	No current illness for this event.	Advair Diskus Inhalation. Albuterol Sulfate HFA Inhalation. Amlodipine Besy-Benazepril HCl Oral. Aspirin Oral. Esomep. Esomeprazole Magnesium Oral. Ibuprofen Oral. NIFEdipine ER Oral. Nitro-Dur Transdermal. PredniSONE Oral.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	906506-1	Burning in throat, flushed face and neck. Developed stridor. Benadryl 25 mg PO given, Epinephrine 0.5mg given IM, albuterol inhaler 4 puffs. Transferred to the Emergency department and admitted to the hospital.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	906514-1	Patient was administered the Covid19 vaccine. She was advised to wait 30 minutes post vaccination. While the patient was waiting, she reported having an itchy throat, throat tightness, then a hoarse voice and a cough developed. This happened at about 20 minutes after she received the vaccine. The patient was assessed by the nursing and provider staff. She received an adult epi pen injection and EMS was called. Patient was taken to the ER by EMS. She reports she received two more epi injections, benadryl, and Solu Medrol. She was stabilized. Patient was discharged from the ED after several hours. She then reports a second episode of throat tightening and worsening cough at 12:30 am and was taken by ambulance to the ICU and admitted. She is still in the hospital at this time 12/22/2020.	T2DM, asthma, obesity, Factor V Leiden deficiency, psoriasis	none known

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	906708-1	"bronchitis or pneumonia; pain down arm into fingers; injection site tingling; Chest felt heavy and difficulty breathing; Chest felt heavy and difficulty breathing; bronchitis or pneumonia; rash on both arms with bright purple skin; rash on both arms with bright purple skin; felt like everything was numb and like she was on drugs; felt like everything was numb and like she was on drugs; Severe headache; This is a spontaneous report from a contactable consumer (nurse) via a Pfizer sales representative. A female patient of an unspecified age received the first dose of the bnt162b2 (BNT162B2; also reported as COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On an unspecified date, the patient experienced: bronchitis or pneumonia (medically significant), pain down arm into fingers, injection site tingling, chest felt heavy and difficulty breathing, rash on both arms with bright purple skin, felt like everything was numb and like she was on drugs, and severe headache; all of which required hospitalization. The clinical course was reported as follows: The female patient (nurse) took the first dose of the vaccine and experienced pain down arm into fingers, injection site tingling. The patient's chest felt heavy and difficulty breathing; however, the ""tongue never swelled."" Rapid response was called, and the patient was taken to the hospital. The patient was given a ""cocktail"" to treat the reaction. The patient ""felt like everything was numb and like she was on drugs"" The patient also felt like she had bronchitis or pneumonia. The patient also experienced a ""rash on both arms with bright purple skin""; along with a severe headache. Therapeutic measures were taken as a result of pain down arm into fingers, injection site tingling, and chest felt heavy and difficulty breathing. The clinical outcome of the events was unknown. No follow-up attempt possible; information about batch/lot number cannot be obtained."	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	907074-1	EMS called after patient displayed a heart rate of 160, a little over an hour after vaccine administration. Patient was taken to the hospital and diagnosed with an episode of RVR Afib; she was admitted to the hospital.	atrial fibrillation hx	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	907101-1	patient felt slightly nauseated at 10 minutes after injection, then developed slight sweating; BP 160/81; 83 at 5:45 and then 158/87 with HR 82 at 5: 52 pm. Her lungs were clear, she was speaking in full sentences and was denying any chest pressure, her usual sense of asthma exacerbation. At 6:05 it was 164/83 with HR 79 and patient developed a dry cough; we decided to have her wait just a bit longer, then cough worsened, so at 6:25, decision was made to have patient seen in ER for further assessment, and en route in wheelchair to ER the dry cough became persistent, spasmodic and patient was unable to speak. Epi-Pen was injected in right mid thigh, and patient transported to ED urgent eval. She noted immediate palpitations, and slight improvement of breathing, was able to speak in four word sentences. On arrival to the ED, patient was administered Duonebs, Albuterol neb, IV Benedryl, IV Solu-medrol; CXR was obtained, with results pending. Patient was sent to observation for ongoing monitoring and assessment of breathing. at 6:30 PM in the ER, she	had been feeling slightly under the weather two weeks ago; no current asthma exacerbation, but has very labile asthma	Singulair, advair, Duonebs, dupixent, albuterol, zyrtec, chlorpheniramine; wellbutrin, Sertraline;
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	907635-1	Patient received covid 19 vaccine. She began to experience itching throat and swollen tongue. She was sent to the Emergency Department. She received IV Benadryl 50 mg, IV famotidine 20 mg and 125 mg IV solu-medrol. Around 930, patient stated that symptoms had resolved, except for tongue being slightly swollen. Patient was admitted to the observation unit of the hospital.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	907860-1	Chest pressure, dizziness, increased troponin lab value.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	908262-1	Anaphylaxis; This is a spontaneous report from a contactable pharmacist. A 55-year-old female patient received the bnt162b2 (BNT162B2; also reported as: PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 17Dec2020 at a single dose for COVID-19 immunization. The patient's medical history included eosinophil process allergic reaction, fish, iodine and shellfish allergy; all from an unknown date and unknown if ongoing. Concomitant medications were not reported. The patient previously took rabies vaccine for immunization and experienced anaphylactic reaction on an unspecified date. On 17Dec2020, the patient experienced anaphylaxis; which required hospitalization, and was assessed as medically significant. The patient was hospitalized for anaphylaxis from 18Dec2020 to an unknown date. The clinical course was reported as follows: The pharmacist called about a patient who received the COVID-19 vaccine on 17Dec2020 and started having a reaction approximately 30 minutes later. The patient used epinephrine (EPIPEN) and 50 mg of diphenhydramine hydrochloride (BENADRYL) and returned to the hospital on 18Dec2020. The patient was currently in the intensive care unit (ICU) receiving an epinephrine drip. The patient had a previous history of an anaphylactic reaction to the rabies vaccine, eosinophil process allergic reaction, fish, iodine and shellfish allergy. The patient was stabilized but continued to have reactions (not specified). The pharmacist had not seen the patient and was reaching out to Pfizer on behalf of the physicians. The pharmacist believed this had been reported by the hospital. The pharmacist had no patient information. Therapeutic measures were taken as a result of anaphylaxis. The clinical outcome of the event, anaphylaxis, was unknown. The batch/lot numbers for the vaccine, BNT162B2, were not provided and will be requested during follow up.; Sender's Comments: Based on the information available, a possible contributory role of the suspect products cannot be excluded for the reported event anaphylaxis due to temporal association. However patient previous history of allergic reaction cannot be excluded to have played a contributory role	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	908918-1	This resident received the first dose of the Pfizer Covid vaccine at the Covid vaccine clinic at medical Facility. He had a rapid response, experienced low blood glucose and low heart rate. NP and medical director were in attendance. Heart rate remained low despite all measures. He was transferred to Hospital for bradycardia.	Unknown	Unknown
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	909490-1	The patient developed palpitations, lightheadedness and nausea and came to the ED and was found to have sinus tachycardia. Unclear if it is a vaccine reaction or due to anxiety or severe iron deficiency anemia.	none	none
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	909586-1	The patient was vaccinated on 12/17/20. Wife was diagnosis with COVID-19 on 12/18/20. He was diagnosis with COVID-19 on 12/21/20. Symptoms worsened on 12/26/20. And he had chest exam (x-ray's), pneumonia bi-lateral and he was hospitalized on 12/26/20.	Unknown	Unknown
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	909720-1	12/23- began to experience intermittent right lower quadrant pain in the morning, fever of 100.4 F in the evening which subsided with ibuprofen. 12/24- no fever noted but intermittent right lower quadrant pain continued, seen at the Health Clinic, sent to Hospital ER for CT scan, diagnosed with appendicitis, appendectomy performed.	None	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	910251-1	41-year-old male who presents to the ED today with a complaint of weakness in his bilateral arms and legs. He states he fell slightly weak yesterday but this morning when he woke up around 6 AM he was not able to get out of bed because he was so weak. He states he feels like he has no muscle strength in his arms and legs. He denies any fever. He denies any cough or shortness of breath. He denies any chest pain or abdominal pain. He denies any nausea, vomiting or diarrhea. He denies any numbness in his extremities. He denies any neck or back pain. He did receive the first Covid vaccination on December 17.	none	amlodipine, nicotine patches, Descovy, azelastine, cetirizine, ibuprofen
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	910316-1	TTP; This is a spontaneous report from a non-contactable pharmacist. A 22-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), intramuscular on 17Dec2020 as a single dose for COVID-19 immunization. The patient did not have any known relevant medical history. The patient had no allergies to medications, food or other products. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient's concomitant medications were not reported. It was unknown if the patient received any other vaccines within four weeks prior to the vaccination. On 21Dec2020, the patient experienced thrombotic thrombocytopenic purpura (TTP); which was serious for hospitalization. The clinical course was as follows: The patient went to the emergency room/urgent care and was admitted in the early morning of 21Dec2020 due to TTP. Work-up was ongoing with no known results. On 21Dec2020, the patient also had a COVID-19 test which was negative. The patient was treated with unspecified corticosteroids and platelets. The clinical outcome of the TTP was unknown. The reporter assessed that it was unknown if the TTP was related to the vaccination. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.; Sender's Comments: Current limited information does not allow a full medically meaningful assessment, especially lack of medical history, concomitant medications, concurrent illness and diagnostic workups such as coagulation test, Combs test, bacterial/virologic/immunological biomarkers to identify the etiology. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	910580-1	<p>Started to have a cough wheezing high respiratory distress again; anaphylaxis; Shortness of breath; Hives; she had red rash on her chest that progressed to her face; Swelling of tongue; Angioedema; Stroke; This is a spontaneous report from a contactable physician. A 55-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; lot number EK5730), intramuscular into the left deltoid on 17Dec2020, at 11:as single doses for covid-19 immunization and epinephrine (MANUFACTURER UNKNOWN), via an unspecified route of administration from an unspecified date at an unspecified dose for a cough wheezing high respiratory distress again, , diphenhydramine hydrochloride (BENADRYL), via an unspecified route of administration from an unspecified date at an unspecified dose for an unspecified indication, dexamethasone sodium succinate (DECADRON), via an unspecified route of administration from an unspecified date at an unspecified dose for an unspecified indication, famotidine (MANUFACTURER UNKNOWN), via an unspecified route of administration from an unspecified date at an unspecified dose for an unspecified indication. Medical history included asthma, hyperlipidemia, hypothyroidism and allergies in the past to food, corn and dye (reported as she's had allergies in the past to food, corn and dye), all since unspecified dates. Concomitant medication included levothyroxine (MANUFACTURER UNKNOWN) and montelukast sodium (SINGULAIR). The patient experienced the following events with outcomes: patient started to have a cough wheezing high respiratory distress again involving hospitalization on 17Dec2020, at 23:20 with outcome of unknown; hives involving hospitalization on 17Dec2020 with outcome of unknown; shortness of breath involving hospitalization on 17Dec2020 with outcome of unknown; anaphylaxis involving hospitalization on 17Dec2020 with outcome of unknown; stroke that was medically significant in Dec2020 with outcome of unknown; angioedema that was medically significant in Dec2020 with outcome of unknown; swelling of tongue in Dec2020 with outcome of unknown; on 17Dec2020, she had red rash on her chest that progressed to her face with outcome of unknown. Therapeutic measures were taken as a result of started to have a cough wheezing high respiratory distress again, shortness of breath, anaphylaxis, stroke, angioedema, swelling of tongue and she had red rash on her chest that progressed to her face. Details were as follows: The physician reported that the patient was in the ICU, and admitted for anaphylaxis reaction to BNT162B2. Relating to causality, the physician said yes as the patient had allergic reaction in the past and showed protracted anaphylaxis. Patient had a unspecified rabies vaccine in the past, for which she had respiratory distress afterwards. The physician guessed some skin redness but no she didn't have any there is no need for intervention or anything like that didn't have the details exactly but she said that she had a response to it, it didn't seem like anaphylaxis reaction; she was pre-medicated prior to the vaccine, which was elaborated as got 4 of Decadron and 25 of Benadryl. She didn't have anything to eat other than cereal what she had before with no reaction. She immediately after the vaccine (Covid vaccine) was administered, she said that she had red rash on her chest that progressed to her face. She started to experience shortness of breath and then respiratory distress. She gave herself EpiPen and then she was given steroids, famotidine and epinephrine in the hospital in the emergency department. The patient was sent home with the Benadryl and instructed to take two sips. At 11:20 that day, at night patient started to have a cough wheezing high respiratory distress again. She gave herself a dose of Epinephrine from her Epi and once she got more Epinephrine, Famotidine steroid, Benadryl and then she was admitted had another episode of stroke and then rash and it progressed to angioedema and tongue swelling. She got intramuscular steroids and was currently on an epinephrine drip. Patient was hospitalized in the surgical intensive care unit. The outcome of the events were unknown. Reaction assessment per the reporter for anaphylaxis reaction to the BNT162B2, noted that patient showed protracted anaphylaxis; the method of assessment: Global Introspection reported a drug result of related. Pfizer is a marketing authorization holder of epinephrine in the country of incidence or the country where the product was purchased (if different). This may be a duplicate report if another marketing authorization holder of epinephrine has submitted the same report to the regulatory authorities.; Sender's Comments: There is a reasonable possibility that the events respiratory distress, anaphylactic reaction, angioedema, dyspnea, and urticaria, were related to BNT162b2 based on known drug safety profile and temporal relationship. The association between stroke and BNT162b2 can not be completely excluded based on the limited information. There is a reasonable possibility that the events stroke, anaphylaxis, angioedema, dyspnea, and urticaria, were related to epinephrine use based on known drug safety profile and temporal relationship. The association between the event respiratory distress with epinephrine use can not be fully excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.</p>	No current illness for this event.	; SINGULAIR; BENADRYL (no brand name); DECADRON [DEXAMETHASONE SODIUM SUCCINATE] (no brand name)
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	910624-1	<p>Admitted to the hospital with hypertensive basal ganglia bleed, had a head bleed; This is a spontaneous report from a contactable consumer. A male patient of unspecified age received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in 2020 at single dose for COVID-19 immunization. Medical history included hypertension. The patient's concomitant medications were not reported. After vaccination, the patient was admitted to the hospital with hypertensive basal ganglia bleed, had a head bleed in 2020. The outcome of event was unknown. Information on the lot/batch number has been requested.</p>	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	910641-1	<p>Weakness and tingling down left arm; Weakness and tingling down left arm; Lightheaded; PVC's every 3 beats; emotional too and just very tired; Can not read the vaccination card as she does not have her glasses; Palpitations; Fatigue; Slept a lot; Thready pulse and vertigo; Thready pulse and vertigo; Soreness in left arm at the injection site and down the left arm; Soreness in left arm at the injection site and down the left arm; This is a spontaneous report from a contactable nurse (patient). A 54-year-old female patient received first dose bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, reason for no lot number of COVID Vaccine: Can not read the vaccination card as she does not have her glasses, Expiry Date unknown), via an unspecified route of administration in the left arm on 18Dec2020 at single dose for 'Work with COVID patients'. Medical history included none. There were no concomitant medications. The patient experienced weakness and tingling down left arm (hospitalization) on 22Dec2020, lightheaded (hospitalization) on 22Dec2020, PVC's every 3 beats (hospitalization) on 22Dec2020, soreness in left arm at the injection site and down the left arm on 18Dec2020, thready pulse and vertigo on 19Dec2020, fatigue on 20Dec2020, slept a lot on 19Dec2020, palpitations on 21Dec2020. Details as follows: Caller says she received the vaccine, she is a nurse. She got the vaccine on Friday, 18Dec2020. She had soreness in her arm and at the injection site on Friday but that was it. On Saturday (19Dec2020) she noticed a thready pulse, but went on with her day with only a little arm pain. Sunday (20Dec2020) she was fatigued and the thready pulse continued. She slept a lot on Saturday (19Dec2020) and Sunday (20Dec2020). Yesterday (21Dec2020) she felt a little better, but had palpitations here and there. This morning (22Dec2020) she went into work, was very lightheaded, had tingling down her left arm, and had palpitations. So she hooked herself up to a monitor. Her pulse ox was between 97-99%. Her heart rate would be in the 90s and then drop to 48, so she went down to the ED. She has had a CT, and she is throwing PVC's every 3 beats. She has not been admitted as they are still waiting for results. She is still in the ED. They did a CT to see if there was a possible clot. On 18Dec2020 she received the vaccine around 2 PM. She had soreness at the injections site and down the left arm, which went away by Sunday (20Dec2020). She now (22Dec2020) has weakness and tingling down the left arm. It was never red or anything at the injection site. Saturday, 19Dec2020, she had thready pulse and Vertigo which lasted until Sunday 20Dec2020. She would be laying in bed and try to flip to the other side and having vertigo. When the fatigue started on Sunday (20Dec2020) she did not feel like herself. She was very emotional too and just very tired. Since she went to the ED she has had a CT scan, one with contrast and one without. She had a chest X-ray, and she is on a cardiac monitor. Results are pending. She has Trigeminy PVCs. She says she never goes to the hospital. But she is not admitted yet (pending clarification). Can not read the vaccination card as she does not have her glasses. Unable to read off the NDC, lot, and expiration date. History: Has been on the same vitamins for two years with nothing new. Blood pressure: Normal base line is 130s/80s maybe lower. Heart rate: Currently within her normal limits of 80s-90s. Depending on what happens, it was asked if she should get the second dose. The patient underwent other lab tests and procedures which included blood pressure measurement: 163/76 on 22Dec2020, chest x-ray: unknown result on 22Dec2020 (Result: Pending), computerised tomogram (CT scan): unknown result on 22Dec2020 (Result: Pending), heart rate: 80s-90s on 22Dec2020, Pulse oximetry: 97-99 % on 22Dec2020, cardiac monitor: results are pending on 22Dec2020. The outcome of events weakness and tingling down left arm, pvc's every 3 beats, lightheaded, palpitations and fatigue was not recovered. The outcome of the event soreness in left arm at the injection site and down the left arm was recovered on 20Dec2020. The outcome of the events thready pulse and vertigo was recovered on 20Dec2020. The outcome of the event slept a lot was recovered on 20Dec2020. The outcome of other events was unknown. Information on the lot/Batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject vaccine cannot be excluded for the reported events due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p>	No current illness for this event. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	911241-1	anaphylactic reaction/worsening anaphylactic symptoms; This is a spontaneous report from a Pfizer-sponsored program. A contactable pharmacist reported that a 55-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot: EK5730, expiry:31Mar2021) via an unspecified route of administration on 17Dec2020 at 0.3 mL, single for covid-19 immunisation. The patient's medical history and concomitant medications were not reported. On 17Dec2020 30 minutes after vaccination, the patient had an anaphylactic reaction and went through an anaphylactic treatment protocol and was sent home. The patient returned to the hospital on 18Dec2020 with worsening anaphylactic symptoms and was admitted to the hospital at that time. The patient was admitted to an Intensive Care Unit and supplemental oxygen was given. It was further reported that the patient did not require intubation. The patient underwent lab tests and procedures which included SARS-CoV-2 test: negative and antibody test: negative; both on an unspecified date. Outcome of event was not recovered.; Sender's Comments: The reported anaphylactic reaction was likely causally related to the vaccine of BNT162B2 due to temporal relationship. This case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	911511-1	anaphylaxis; This is a spontaneous report from a contactable physician reporting on behalf of patient. A patient of unspecified age and gender received single dose of BNT162B2 (batch/lot number and exp date not reported), via an unspecified route of administration on an unspecified date for immunisation. The patient's medical history and concomitant medications were not reported. On an unspecified date, the patient experienced anaphylaxis with a very protracted course requiring an epi dose for 4.5 days and was still in the ICU (date/s unspecified) following administration of the COVID vaccine. The physician would like to use a drop of leftover vaccine from one of the vials to do a future skin test after the patient is stable. They were unsure if they needed permission as this was standard practice in allergy to test afterwards but wanted to check in with the company. The outcome of event was unknown. Information about batch/lot number has been requested.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of anaphylaxis cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	912574-1	Rushed to ER. Has now been tubed and put into the ICU and has had full-cardiac arrest less than 24 hours after receiving the vaccine.	COVID-19 positive on 12/4/2020. Was still symptomatic at last check	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	912602-1	Hospitalized 12/29, has now been tubed and put into the ICU	COVID-19 positive 11/30 with fever, sore throat, dyspnea and difficulty breathing	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	912609-1	Patient observed for 15 minutes in the clinic after vaccine with no issues. Patient is a NP and left clinic. 10 min after leaving, was in physician lounge and had tachycardia, dizziness, flushing. Hospitalist in lounge recorded pulse as 180 normal rhythm. Pat. Pat taken to ED. In SVT - heart rate eventually reduced. Patient released on cardiac monitor to home. Later that night, patient had increased heart rate again - 160's - while in bed. Admitted to hospital.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	913106-1	The morning after getting vaccine, patient had high BP 213/159, 92% on room air, shaking, chills, LCTAB with diminishment at bases, emesis. Admitted to hospital for pneumonia.	No current illness for this event.	Amlodipine 2.5mg, aspirin 81mg, atorvastatin 10mg, bacid tablet, namenda 5mg, keppra 500mg, meclizine 12.5, mirazapin 15mg, tylenol 325
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	913866-1	Patient administered Pfizer-BioNtech vaccine, dose #1 in series at 810AM, without notable concerns for 10 minutes. At 10 minutes post vaccination, patient developed itching and some blotching, throat becoming scratchy. No known allergies to components listed in vaccine, though does have a listed allergy to contrast dye, does not carry an epi-pen. Patient was walked to urgent/emergency care in the clinic, where she was seen immediately. Patient was given diphenhydramine 25 mg IV, pantoprazole 40 mg IV, with mild urticaria continuing. Patient notes she feels her 'back is on fire'. Patient was then given methylprednisolone 125 mg IV. At this time, no SOB is noted, urticaria is still present. 0930 patient reports swelling in throat and respiratory difficulties at this time with visible edema in the neck. 0.3 mg Epinephrine given at 0935, epinephrine drip and racemic epinephrine neb given. 1006 Patient on epinephrine drip 2.5 mics/hour. Patient transferred to Medical Center ICU, where she remains at the time of this report.	NA	Prenatal Multivitamin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	914280-1	Patient presented to the ER on 12/26/2020 with complaints of fever, chills and SOB for about 3 days. Stated it was a gradual onset and has been intermittent. Also reported some nausea and chronic loose stools, mild loss of smell and sinus drainage, non productive cough. Discharged to observation and then home on 12/27/2020. Patient readmitted to hospital on 12/30/2020.	No current illness for this event.	aspirin 81mg, nitro 0.4 sublingual, hydrochlorothiazide 25mg, repatha 120mg, plavix 75mg, rotonix, torsemide 5mg, zeta 10mg, zoloft 100mg, bystolic 5mg, synthroid 100mcg, telmisartan 80mg, allopurinol 100mg,
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	914835-1	Went to Emergency room on 12/28/20 because he was short of breath. Tested positive for COIVD_19 and was admitted with hypoxia.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	915161-1	"my left arm and breast were tender with some mild body aches and low grade headache/Arm soreness; my left arm and breast were tender with some mild body aches and low grade headache/ left breast was increasingly painful with swollen palpable lymph nodes; my left arm and breast were tender with some mild body aches and low grade headache/ left breast was increasingly painful with swollen palpable lymph nodes; my left arm and breast were tender with some mild body aches and low grade headache/ left breast was increasingly painful with swollen palpable lymph nodes; my left arm and breast were tender with some mild body aches and low grade headache; body soreness and stiffness; This is a spontaneous report from a contactable healthcare professional. A 34-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. The patient stated, ""the day after the injection, my left arm and breast were tender with some mild body aches and low grade headache. Sunday Arm soreness went away but left breast was increasingly painful with swollen palpable lymph nodes, with body soreness and stiffness. Monday left breast is still remarkably tender with palpable lymph nodes"" on 19Dec2020 (reported as Seriousness criteria-Caused/prolonged hospitalization: Yes, on an unspecified date in Dec2020). The outcome of the event was not recovered.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	916042-1	10 minutes after vaccine numbness and tingling in left foot, hand and left side of face. Spacing out feeling. Feel like i'm going to pass out.	no COVID- August 2020	ibuprofen, tylenol
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	916247-1	Redness about 1 1/2 inches around injection site, edema to right arm, r side of neck, r breast, r shoulder, temp 99.3, increased blood pressure. Patient went to primary care physician. She was then sent to the ER. She was Covid (+) in July 2020	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	917727-1	Patient with a history of thalassemia and Gilbert's disease, developed severe jaundice three days after vaccination. Had mild headache and sore arm but otherwise felt well. Had labs drawn - found to have highly elevated bilirubin (23) and LFTs in the 700s. Was admitted to the hospital and had CT showing Cholelithiasis, cholecystolithiasis and minimal intrahepatic biliary ductal dilatation. Left hospital and was admitted to another facility where plan was for ERCP and cholecystectomy. Ultimately unclear if at all related to the vaccination - may be coincidental.	No current illness for this event.	Folic acid, multivitamin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	918740-1	Scratchy throat; itching lips; This is a spontaneous report from a non-contactable nurse. A 36-year-old patient of an unspecified gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number EK5730, via an unspecified route of administration on Right arm from 22Dec2020 to 22Dec2020 as single dose for COVID-19 immunization. Medical history included food allergy (Shrimp). The patient's concomitant medications were not reported. The patient experienced scratchy throat and itching lips for approximately 1.5 hours starting 20 mins post vaccine on 22Dec2020. The event caused prolonged hospitalization. The outcome of the events was recovered on 22Dec2020. No follow-up attempts are possible. No further information is expected.; Sender's Comments: Based on temporal association, a possible contributory role of suspect BNT162B2 vaccine cannot be excluded for reported events throat irritation and lip itching. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	918741-1	delirious; hypoxic; fever; ataxic; incontinent; confused; Chills; HA; anorexia/had no appetite; myalgias; extreme fatigue; slept all and had no appetite; This is a spontaneous report from a contactable physician. A 74-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 15Dec2020 16:00 at single dose for COVID-19 immunization. Medical history included diabetes mellitus (DM). The patient has no known allergies. The patient's concomitant medications were not reported. He was an ER doctor and the medical director of his hospital. The patient was asymptomatic when he got the vaccine on 15Dec2020. 3 hours after the vaccine he began to get chills, HA, anorexia, myalgias, and extreme fatigue. This worsened and he slept all and had no appetite. On 19Dec2020 he woke up delirious with a fever and was ataxic, hypoxic, incontinent, and confused. The patient was hospitalized due to the events on 15Dec2020. The events also caused prolonged hospitalization due to the events. The patient was not diagnosed with COVID prior to vaccination. The patient was tested for COVID via nasal swab post vaccination with unknown results. The patient did not receive any other vaccines within 4 weeks prior to COVID vaccine. The outcome of the events was not recovered. Therapeutic measures were taken as a result of the events as the patient required oxygen, plasma, and remdisivir. The batch/lot numbers for the vaccine, BNT162B2, were not provided and will be requested during follow up.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of reported serious events might not be excluded, considering the plausible temporal relationship. Fever, chills, headache, fatigue and muscle pain are the known adverse event profile of the suspect product. More information such as detailed underlying medical conditions and concomitant medications are needed for fully medical assessment. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	918763-1	She was hospitalized for a month Occurred after a flu two months prior and a stomach flu 2-3 weeks prior; She was hospitalized for a month Occurred after a flu two months prior and a stomach flu 2-3 weeks prior; This is a spontaneous report from a contactable consumer. A 75-year-old female patient received bnt162b2 (BNT162B2, lot number and expiry date were not reported), via an unspecified route of administration on an unspecified date at a single dose for covid-19 vaccination. Medical history included guillain-barre syndrome from 2011 at the age of 65 and Levaquin allergy. The patient's concomitant medications were not reported. On an unspecified date, the patient was hospitalized for a month that occurred after a flu two months prior and a stomach flu 2-3 weeks prior. The outcome of the events was unknown. Information about lot/batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	918774-1	abdominal pain; nausea; high blood pressure; This is a spontaneous report from a contactable consumer. A 93-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL0140), via an unspecified route of administration on 22Dec2020 at a single dose for COVID-19 immunization. Medical history included diabetic and irritable bowel. The patient's concomitant medications were not reported. The patient received the COVID vaccine and had abdominal pain, nausea and high blood pressure within 12 to 18 hours of vaccine received. The events lead to nursing home to emergency room and admitted to hospital. The patient was hospitalized due to events since 23Dec2020. Outcome of the events was recovering.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	918789-1	She had an immediate reaction of accelerated heart rate and elevated blood pressure; She has very slightly elevated heart enzymes.; She had an immediate reaction of accelerated heart rate and elevated blood pressure; She's very anxious and very anxious tonight being alone at the hospital; This is a spontaneous report from a contactable consumer (patient's father). A 30-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. The patient had an immediate reaction of accelerated heart rate and elevated blood pressure. She was monitored for an hour and it subsided. On unspecified date in Dec2020 at 1:00am in the morning she had racing heart rate and went to ER. She was still in hospital. Things were not entirely stabilized. She had very slightly elevated heart enzymes in Dec2020 with outcome of unknown. They keep her overnight for an echocardiogram in morning. The patient was very anxious being alone at the hospital. Caller questioned if this has been reported with the vaccine. Lot/Batch and Expiry date has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	919152-1	""Pfizer-BioNTech COVID-19 Vaccine EUA."" Patient received first dose of vaccine on 12/21/2020. Patient called on 1/3/2021 to notify that she developed symptoms on 12/27/2020 and had an appendectomy on 12/28/2020 at another facility. Patient also reports that CDC V-Safe Application was used to report event as well. Patient reports that she is recovering well."	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Hospitalized	920224-1	had a positive COVID test; had a positive COVID test; O2 Saturation of 80% / Hypoxia; shortness of breath; He has a CT scan which showed extensive infiltration in the lungs; muscle pain; chills; body aches; low grade fever; cough; This is a spontaneous report from a contactable physician (pulmonary medicine). This physician reported similar events for 2 patients. This is 1st of 2 reports. A 35-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for covid-19 immunization. There were no medical history and concomitant medications. Caller stated that his close friend who was ER physician (front line worker) and within 24 hours after receiving the COVID vaccine, developed COVID or symptoms of COVID. Patient received the COVID vaccine on 18Dec2020 and the same night patient started with a low grade fever, body aches, chills, muscle pain, shortness of breath, cough, O2 saturation of 80% (hypoxia) and was in the intensive care unit now. Patient swore this was related to the vaccine. This patient tested positive for COVID. He had a CT (computerised tomogram) scan which showed extensive infiltration in the lungs in Dec2020. Patient was admitted to the hospital on 24Dec2020 and then was moved to the ICU 2-days later, on 26Dec2020. Caller thought patient had a positive COVID test at another hospital. Caller did know that tested positive at the current hospital on 26Dec2020 which was done to confirm the previous positive test. Caller thought patient had his first positive COVID test either the same day or the next day after receiving the vaccine. Event of O2 Saturation of 80% / hypoxia was reported as hospitalization from 24Dec2020 and life threatening; infiltration in the lungs and shortness of breath caused hospitalization from 24Dec2020, muscle pain, chills and positive COVID test was reported as medically significant; and other events were reported as non-serious. Outcome of O2 saturation of 80% / hypoxia and shortness of breath was not recovered, outcome of cough was recovering; and outcome of other events were unknown. Information about lot/batch number has been requested. ; Sender's Comments: Based on the information currently available, a lack of efficacy with suspected vaccine BNT162B2 in this patient cannot be completely excluded. Linked Report(s) : US-PFIZER INC-2020519020 same reporter/drug , different patient/AE.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Emergency Room *	903931-1	Presented with periumbilical pain to emergency department (patient works at Medical Center). Admitted to hospital for small bowel obstruction. Labs were consistent with dehydration (Hct 55, Cr 1.25), as well as CRP 1.10. A CT Abd/Pelvis identified proximal dilation and fecalization of small bowel, with a transition point in the left lower quadrant. Distal to the transition point, the small bowel appears thick, with hyperenhancement and inflammation progressing into the cecum. General Surgery was consulted and patient admitted to hospital for management of this small bowel obstruction.	None	Denies any home medications
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Emergency Room *	904234-1	Rach, tachycardia, palpitations, shortness of breath shortly after receiving vaccine - given epi, solumedrol, Benadryl. persistent symptoms the following day.	No current illness for this event.	Imitrex, Topamax
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Emergency Room *	905345-1	Patient received Pfizer COVID 19 vaccine last Thursday 12/17. Admitted today (12/21) with bleeding and low platelet count - working up for ITP, TTP. Given recency of vaccination no known contributory allergy or medical history, physician thought potentially associated with vaccination.	No known past medical history	None reported by patient
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Emergency Room *	906282-1	Given the vaccine at 712 pm on 12/20/20. At approximately 715 pm, she began to clear her throat and then became unable to speak, followed by audible wheezes and short, shallow breaths. At 1923, Epinephrine was administered. At 1928, she was able to speak again and was transported to the ED. The patient reports after arrival to the ER, the symptoms returned. She was given PO Benadryl, followed by IV Benadryl, and then a 2nd dose of Epinephrine. She was admitted to the ICU for observation.	No current illness for this event.	IVIG, Mestinon, Lisinopril, Immodium, Advil, Imuran, Baclofen
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Emergency Room *	906318-1	57-year-old female history of hypertension, hyperlipidemia, type 2 diabetes, COPD, subsegmental PE is not on anticoagulation, multiple cardiac stents presenting with greater than 12 hrs of worsening left-sided chest pressure, headache and shortness of breath. Patient takes a daily aspirin and had no improvement of symptoms with her at-home nitroglycerin. Here afebrile, HTN, remaining vitals wnl. Non-toxic, in moderate distress 2/2 to pain. EKG with minimal ST depressions in leads II and III. Will plan for CXR and labs. Pt given zofran and morphine for pain control. Will give additional aspirin for total 324 mg in last 24 hrs. On re-evaluation, pt with mild improvement in pain. Troponin elevated at 0.18, remaining labs wnl. At this time concerned for NSTEMI, pt treated with 1 mg/kg of lovenox and MOD consulted for admission. MOD evaluated pt and cardiology was consulted. Given concerning PMHx and current hx of chest pain with findings consistent with NSTEMI, cardiology at recommended likely transfer for cardiac cath. Will pend repeat troponin and EKG for dispo decision.	No current illness for this event.	Advair Diskus Inhalation. Albuterol Sulfate HFA Inhalation. Amlodipine Besy-Benazepril HCl Oral. Aspirin Oral. Esomep. Esomeprazole Magnesium Oral. Ibuprofen Oral. NIFEdipine ER Oral. Nitro-Dur Transdermal. PrednisONE Oral.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Emergency Room *	906514-1	Patient was administered the Covid19 vaccine. She was advised to wait 30 minutes post vaccination. While the patient was waiting, she reported having an itchy throat, throat tightness, then a hoarse voice and a cough developed. This happened at about 20 minutes after she received the vaccine. The patient was assessed by the nursing and provider staff. She received an adult epi pen injection and EMS was called. Patient was taken to the ER by EMS. She reports she received two more epi injections, benadryl, and Solu Medrol. She was stabilized. Patient was discharged from the ED after several hours. She then reports a second episode of throat tightening and worsening cough at 12:30 am and was taken by ambulance to the ICU and admitted. She is still in the hospital at this time 12/22/2020.	T2DM, asthma, obesity, Factor V Leiden deficiency, psoriasis	none known
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Emergency Room *	907101-1	patient felt slightly nauseated at 10 minutes after injection, then developed slight sweating; BP 160/81; 83 at 5:45 and then 158/87 with HR 82 at 5: 52 pm. Her lungs were clear, she was speaking in full sentences and was denying any chest pressure, her usual sense of asthma exacerbation. At 6:05 it was 164/83 with HR 79 and patient developed a dry cough; we decided to have her wait just a bit longer, then cough worsened, so at 6:25, decision was made to have patient seen in ER for further assessment, and en route in wheelchair to ER the dry cough became persistent, spasmodic and patient was unable to speak. Epi-Pen was injected in right mid thigh, and patient transported to ED urgent eval. She noted immediate palpitations, and slight improvement of breathing, was able to speak in four word sentences. On arrival to the ED, patient was administered Duonebs, Albuterol neb, IV Benedryl, IV Solumedrol; CXR was obtained, with results pending. Patient was sent to observation for ongoing monitoring and assessment of breathing. at 6:30 PM in the ER, she	had been feeling slightly under the weather two weeks ago; no current asthma exacerbation, but has very labile asthma	Singulair, advair, Duonebs, dupixent, albuterol, zyrtec, chlorpheniramine; wellbutrin, Sertraline;
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Emergency Room *	908877-1	He was fine ate lunch, in a room with a patient, felt light headed and dizziness, passed out, he became unresponsive, he was hypotensive, he is now in the ER.	no	no
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Emergency Room *	909490-1	The patient developed palpitations, lightheadedness and nausea and came to the ED and was found to have sinus tachycardia. Unclear if it is a vaccine reaction or due to anxiety or severe iron deficiency anemia.	none	none
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Emergency Room *	909720-1	12/23- began to experience intermittent right lower quadrant pain in the morning, fever of 100.4 F in the evening which subsided with ibuprofen. 12/24- no fever noted but intermittent right lower quadrant pain continued, seen at the Health Clinic, sent to Hospital ER for CT scan, diagnosed with appendicitis, appendectomy performed.	None	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Emergency Room *	910251-1	41-year-old male who presents to the ED today with a complaint of weakness in his bilateral arms and legs. He states he felt slightly weak yesterday but this morning when he woke up around 6 AM he was not able to get out of bed because he was so weak. He states he feels like he has no muscle strength in his arms and legs. He denies any fever. He denies any cough or shortness of breath. He denies any chest pain or abdominal pain. He denies any nausea, vomiting or diarrhea. He denies any numbness in his extremities. He denies any neck or back pain. He did receive the first Covid vaccination on December 17.	none	amlodipine, nicotine patches, Descovy, azelastine, cetirizine, ibuprofen

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Emergency Room *	910316-1	<p>TTP; This is a spontaneous report from a non-contactable pharmacist. A 22-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), intramuscular on 17Dec2020 as a single dose for COVID-19 immunization. The patient did not have any known relevant medical history. The patient had no allergies to medications, food or other products. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient's concomitant medications were not reported. It was unknown if the patient received any other vaccines within four weeks prior to the vaccination. On 21Dec2020, the patient experienced thrombotic thrombocytopenic purpura (TTP); which was serious for hospitalization. The clinical course was as follows: The patient went to the emergency room/urgent care and was admitted in the early morning of 21Dec2020 due to TTP. Work-up was ongoing with no known results. On 21Dec2020, the patient also had a COVID-19 test which was negative. The patient was treated with unspecified corticosteroids and platelets. The clinical outcome of the TTP was unknown. The reporter assessed that it was unknown if the TTP was related to the vaccination. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.; Sender's Comments: Current limited information does not allow a full medically meaningful assessment, especially lack of medical history, concomitant medications, concurrent illness and diagnostic workups such as coagulation test, Combs test, bacterial/virologic/immunological biomarkers to identify the etiology. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p>	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Emergency Room *	910580-1	<p>Started to have a cough wheezing high respiratory distress again; anaphylaxis; Shortness of breath; Hives; she had red rash on her chest that progressed to her face; Swelling of tongue; Angioedema; Stroke; This is a spontaneous report from a contactable physician. A 55-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; lot number EK5730), intramuscular into the left deltoid on 17Dec2020, at 11:as single doses for covid-19 immunization and epinephrine (MANUFACTURER UNKNOWN), via an unspecified route of administration from an unspecified date at an unspecified dose for a cough wheezing high respiratory distress again, , diphenhydramine hydrochloride (BENADRYL), via an unspecified route of administration from an unspecified date at an unspecified dose for an unspecified indication, dexamethasone sodium succinate (DECADRON), via an unspecified route of administration from an unspecified date at an unspecified dose for an unspecified indication, famotidine (MANUFACTURER UNKNOWN), via an unspecified route of administration from an unspecified date at an unspecified dose for an unspecified indication. Medical history included asthma, hyperlipidemia, hypothyroidism and allergies in the past to food, corn and dye (reported as she's had allergies in the past to food, corn and dye), all since unspecified dates. Concomitant medication included levothyroxine (MANUFACTURER UNKNOWN) and montelukast sodium (SINGULAIR). The patient experienced the following events with outcomes:</p> <p>patient started to have a cough wheezing high respiratory distress again involving hospitalization on 17Dec2020, at 23:20 with outcome of unknown; hives involving hospitalization on 17Dec2020 with outcome of unknown; shortness of breath involving hospitalization on 17Dec2020 with outcome of unknown; anaphylaxis involving hospitalization on 17Dec2020 with outcome of unknown; stroke that was medically significant in Dec2020 with outcome of unknown; angioedema that was medically significant in Dec2020 with outcome of unknown; swelling of tongue in Dec2020 with outcome of unknown; on 17Dec2020, she had red rash on her chest that progressed to her face with outcome of unknown. Therapeutic measures were taken as a result of started to have a cough wheezing high respiratory distress again, shortness of breath, anaphylaxis, stroke, angioedema, swelling of tongue and she had red rash on her chest that progressed to her face. Details were as follows: The physician reported that the patient was in the ICU, and admitted for anaphylaxis reaction to BNT162B2. Relating to causality, the physician said yes as the patient had allergic reaction in the past and showed protracted anaphylaxis. Patient had a unspecified rabies vaccine in the past, for which she had respiratory distress afterwards. The physician guessed some skin redness but no she didn't have any there is no need for intervention or anything like that didn't have the details exactly but she said that she had a response to it, it didn't seem like anaphylaxis reaction; she was pre-medicated prior to the vaccine, which was elaborated as got 4 of Decadron and 25 of Benadryl. She didn't have anything to eat other than cereal what she had before with no reaction. She immediately after the vaccine (Covid vaccine) was administered, she said that she had red rash on her chest that progressed to her face. She started to experience shortness of breath and then respiratory distress. She gave herself EpiPen and then she was given steroids, famotidine and epinephrine in the hospital in the emergency department. The patient was sent home with the Benadryl and instructed to take two sips. At 11:20 that day, at night patient started to have a cough wheezing high respiratory distress again. She gave herself a dose of Epinephrine from her Epi and once she got more Epinephrine, Famotidine steroid, Benadryl and then she was admitted had another episode of stroke and then rash and it progressed to angioedema and tongue swelling. She got intramuscular steroids and was currently on an epinephrine drip. Patient was hospitalized in the surgical intensive care unit. The outcome of the events were unknown. Reaction assessment per the reporter for anaphylaxis reaction to the BNT162B2, noted that patient showed protracted anaphylaxis; the method of assessment: Global Introspection reported a drug result of related. Pfizer is a marketing authorization holder of epinephrine in the country of incidence or the country where the product was purchased (if different). This may be a duplicate report if another marketing authorization holder of epinephrine has submitted the same report to the regulatory authorities.; Sender's Comments: There is a reasonable possibility that the events respiratory distress, anaphylactic reaction, angioedema, dyspnea, and urticaria, were related to BNT162b2 based on known drug safety profile and temporal relationship. The association between stroke and BNT162b2 can not be completely excluded based on the limited information. There is a reasonable possibility that the events stroke, anaphylaxis, angioedema, dyspnea, and urticaria, were related to epinephrine use based on known drug safety profile and temporal relationship. The association between the event respiratory distress with epinephrine use can not be fully excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.</p>	No current illness for this event.	; SINGULAIR; BENADRYL (no brand name); DECADRON [DEXAMETHASONE SODIUM SUCCINATE] (no brand name)
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Emergency Room *	912574-1	Rushed to ER. Has now been tubed and put into the ICU and has had full-cardiac arrest less than 24 hours after receiving the vaccine.	COVID-19 positive on 12/4/2020. Was still symptomatic at last check	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Emergency Room *	912602-1	Hospitalized 12/29, has now been tubed and put into the ICU	COVID-19 positive 11/30 with fever, sore throat, dyspnea and difficulty breathing	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Emergency Room *	913866-1	Patient administered Pfizer-BioNtech vaccine, dose #1 in series at 810AM, without notable concerns for 10 minutes. At 10 minutes post vaccination, patient developed itching and some blotching, throat becoming scratchy. No known allergies to components listed in vaccine, though does have a listed allergy to contrast dye, does not carry an epi-pen. Patient was walked to urgent/emergency care in the clinic, where she was seen immediately. Patient was given diphenhydramine 25 mg IV, pantoprazole 40 mg IV, with mild urticaria continuing. Patient notes she feels her 'back is on fire'. Patient was then given methylprednisolone 125 mg IV. At this time, no SOB is noted, urticaria is still present. 0930 patient reports swelling in throat and respiratory difficulties at this time with visible edema in the neck. 0.3 mg Epinephrine given at 0935, epinephrine drip and racemic epinephrine neb given. 1006 Patient on epinephrine drip 2.5 mics/hour. Patient transferred to Medical Center ICU, where she remains at the time of this report.	NA	Prenatal Multivitamin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Emergency Room *	916042-1	10 minutes after vaccine numbness and tingling in left foot, hand and left side of face. Spacing out feeling. Feel like i'm going to pass out.	no COVID- August 2020	ibuprofen, tylenol
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Emergency Room *	916247-1	Redness about 1 1/2 inches around injection site, edema to right arm, r side of neck, r breast, r shoulder, temp 99.3, increased blood pressure. Patient went to primary care physician. She was then sent to the ER. She was Covid (+) in July 2020	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Emergency Room *	917727-1	Patient with a history of thalassemia and Gilbert's disease, developed severe jaundice three days after vaccination. Had mild headache and sore arm but otherwise felt well. Had labs drawn - found to have highly elevated bilirubin (23) and LFTs in the 700s. Was admitted to the hospital and had CT showing Cholelithiasis, choledocholithiasis and minimal intrahepatic biliary ductal dilatation. Left hospital and was admitted to another facility where plan was for ERCP and cholecystectomy. Ultimately unclear if at all related to the vaccination - may be coincidental.	No current illness for this event.	Folic acid, multivitamin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Emergency Room *	918741-1	delirious; hypoxic; fever; ataxic; incontinent; confused; Chills; HA; anorexia/had no appetite; myalgias; extreme fatigue; slept all and had no appetite; This is a spontaneous report from a contactable physician. A 74-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 15Dec2020 16:00 at single dose for COVID-19 immunization. Medical history included diabetes mellitus (DM). The patient has no known allergies. The patient's concomitant medications were not reported. He was an ER doctor and the medical director of his hospital. The patient was asymptomatic when he got the vaccine on 15Dec2020. 3 hours after the vaccine he began to get chills, HA, anorexia, myalgias, and extreme fatigue. This worsened and he slept all and had no appetite. On 19Dec2020 he woke up delirious with a fever and was ataxic, hypoxic, incontinent, and confused. The patient was hospitalized due to the events on 15Dec2020. The events also caused prolonged hospitalization due to the events. The patient was not diagnosed with COVID prior to vaccination. The patient was tested for COVID via nasal swab post vaccination with unknown results. The patient did not receive any other vaccines within 4 weeks prior to COVID vaccine. The outcome of the events was not recovered. Therapeutic measures were taken as a result of the events as the patient required oxygen, plasma, and remdisivir. The batch/lot numbers for the vaccine, BNT162B2, were not provided and will be requested during follow up.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of reported serious events might not be excluded, considering the plausible temporal relationship. Fever, chills, headache, fatigue and muscle pain are the known adverse event profile of the suspect product. More information such as detailed underlying medical conditions and concomitant medications are needed for fully medical assessment. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Emergency Room *	918774-1	abdominal pain; nausea; high blood pressure; This is a spontaneous report from a contactable consumer. A 93-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL0140), via an unspecified route of administration on 22Dec2020 at a single dose for COVID-19 immunization. Medical history included diabetic and irritable bowel. The patient's concomitant medications were not reported. The patient received the COVID vaccine and had abdominal pain, nausea and high blood pressure within 12 to 18 hours of vaccine received. The events lead to nursing home to emergency room and admitted to hospital. The patient was hospitalized due to events since 23Dec2020. Outcome of the events was recovering.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Emergency Room *	918789-1	She had an immediate reaction of accelerated heart rate and elevated blood pressure; She has very slightly elevated heart enzymes; She had an immediate reaction of accelerated heart rate and elevated blood pressure; She's very anxious and very anxious tonight being alone at the hospital; This is a spontaneous report from a contactable consumer (patient's father). A 30-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. The patient had an immediate reaction of accelerated heart rate and elevated blood pressure. She was monitored for an hour and it subsided. On unspecified date in Dec2020 at 1:00am in the morning she had racing heart rate and went to ER. She was still in hospital. Things were not entirely stabilized. She had very slightly elevated heart enzymes in Dec2020 with outcome of unknown. They keep her overnight for an echocardiogram in morning. The patient was very anxious being alone at the hospital. Caller questioned if this has been reported with the vaccine. Lot/Batch and Expiry date has been requested.	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Emergency Room *	920224-1	had a positive COVID test; had a positive COVID test; O2 Saturation of 80% / Hypoxia; shortness of breath; He has a CT scan which showed extensive infiltration in the lungs; muscle pain; chills; body aches; low grade fever; cough; This is a spontaneous report from a contactable physician (pulmonary medicine). This physician reported similar events for 2 patients. This is 1st of 2 reports. A 35-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for covid-19 immunization. There were no medical history and concomitant medications. Caller stated that his close friend who was ER physician (front line worker) and within 24 hours after receiving the COVID vaccine, developed COVID or symptoms of COVID. Patient received the COVID vaccine on 18Dec2020 and the same night patient started with a low grade fever, body aches, chills, muscle pain, shortness of breath, cough, O2 saturation of 80% (hypoxia) and was in the intensive care unit now. Patient swore this was related to the vaccine. This patient tested positive for COVID. He had a CT (computerised tomogram) scan which showed extensive infiltration in the lungs in Dec2020. Patient was admitted to the hospital on 24Dec2020 and then was moved to the ICU 2-days later, on 26Dec2020. Caller thought patient had a positive COVID test at another hospital. Caller did know that tested positive at the current hospital on 26Dec2020 which was done to confirm the previous positive test. Caller thought patient had his first positive COVID test either the same day or the next day after receiving the vaccine. Event of O2 Saturation of 80% / hypoxia was reported as hospitalization from 24Dec2020 and life threatening; infiltration in the lungs and shortness of breath caused hospitalization from 24Dec2020, muscle pain, chills and positive COVID test was reported as medically significant; and other events were reported as non-serious. Outcome of O2 saturation of 80% / hypoxia and shortness of breath was not recovered, outcome of cough was recovering; and outcome of other events were unknown. Information about lot/batch number has been requested. - Sender's Comments: Based on the information currently available, a lack of efficacy with suspected vaccine BNT162B2 in this patient cannot be completely excluded. Linked Report(s) : US-PFIZER INC-2020519020 same reporter/drug , different patient/AE.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	Yes	Unknown	Emergency Room *	920628-1	6-7 hours after the vaccine she developed arm pain, fever and chills. About an hour later she started to have abdominal pain which worsened over the course of the day to excruciating. She went to the Emergency Room where a CT scan revealed a perforation of her sigmoid colon and had a resection of the area of the colon and a diverting colostomy surgery done the evening of 1/3/2021.	No current illness for this event.	Tylenol 350 mg as needed Valium 5 mg as needed

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	902464-1	within 15 minutes progressive light-headedness leading to near-syncope and diaphoresis. After 20 minutes symptoms subsided.	none	none
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	902491-1	Within a few minutes of receiving the COVID 19 vaccination, patient developed lightheadedness, shortness of breath, headache, and some nausea. She did get some redness to her neck and upper chest. No recent illness. Had elevated BPs ranged from 150/103 to 207/126. HR ranged from 82-106. O2 sats always > 96%. Temp 37.1 C. Received Tylenol 1000 mg PO, Dexamethasone 10 mg IV, diphenhydramine 50 mg IV, famotidine 20 mg IV, ketorolac 30 mg IV, ondansetron 4 mg IV, and 1 L NS. Patient prescribed EpiPen and prednisone and discharged.	No current illness for this event.	DULOXETINE (CYMBALTA) 60 MG CAPSULE Take 1 capsule (60 mg total) by mouth once daily at bedtime HYDROCODONE-ACETAMINOPHEN (NORCO) 5-325 MG TABLET Take 1 tablet by mouth once a day as needed for moderate to severe pain, with allowance
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	902492-1	About 25 minutes after receiving vaccine complained of dizziness and being hot and nauseated. No difficulty breathing. No chest pain. B/P was 130/90 and was monitored. It went down to 124/80 after he started feeling better. He was wearing sweater over shirt and it was warm in building. Took sweater off. Cool wet cloth applied to back of neck. States he had only had a donut and cup of hot chocolate before receiving vaccine. Sprite and peanut butter crackers given. Became nauseated after eating peanut butter crackers Blood pressure monitored monitored. He laid on exam table for about 15 minutes. He felt better. Stood up and walked to conference room for another 15 minutes. Stated he felt much better and was ready to leave. Coworker drove him back. Received email from him letting us know he had made it back and they had stopped and eaten pizza on the way. Received text from coworker that he was dizzy and seeing spots and that his blood pressure had been 120/80 and then spiked to 160/100. Coworkers taking him to ER at Hospital for evaluation.	none	unknown
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	902557-1	1750- IM injection of R Deltoid. She was sitting, and felt short of breath without wheeze or tightness in the chest or throat. She stood up, and then felt tunneling. Assisted to chair and floor. Pulse weak, skin flushed, sweating on torso. Face and Neck remained flushed and red. She refused epi at first. So we gave her benedryl 25 mg po with apple juice. She said she just had a big meal 30 min prior, but we checked her blood sugar- it was 85. 10 min after the first SOB feeling, it returned. BP was recorded as 160/100.	none	Nuvaring

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	903506-1	(1145) Left eyelid swelling 15 minutes after vaccination, (1155) b/l superior periorbital edema and erythema, b/l ear erythema and burning, and b/l hand tingling. (1200) Oral Benadryl 25 mg was given. (1230) symptoms improved and I was able to leave. While riding in the car on the way home started to have chills w/ goosebumps and nausea in short waves. Took an nap b/c my chills worsened and slept until 1630. Woke up b/c of worsening chills, shivering, chest tightness, nausea, b/l hand numbness and tingling, right foot burning and stinging, and constant throat clearing b/c throat felt thick. Called the nurse on-call number provided in vaccine packet and was transferred to virtual care and report was given. Medical team advised me to go to the ED. (1900) Arrived at ED and temp was 101 and the chills, numbness, foot burning, and chest heaviness were worse and my eyes were burning and heavy. I was given oral Pepcid and an IV was started. After an IVP of Benadryl and Solu-Medrol I experienced severe burning starting in my head, neck, chest, and stomach. Then it felt like my veins were on fire all the way to my fingers and toes. This was followed by strong nausea w/o vomiting. I was then given IVP of Zofran and Ativan and NS drip. (1940-2020) Chills, burning around eyes, and vertigo continued other symptoms were improving (2020) Provider returned and reported that labs were normal and I was probably having a reaction to the vaccine. (2035) Discharged from ED. Experienced chills, hand and foot numbness and tingling after discharge but was able to go to sleep.	Evening of 12/15 had sneezing and a mild runny nose took one dose of Sudafed and symptoms resolved Morning of 12/16 had mild PND and nasal congestion. After blowing nose had a few dry coughs. Took one dose of Claritin and symptoms resolved within one hour.	Adderall XR 30 mg tablet taken at 0600 am
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	903507-1	Became hot and felt itching minutes after receiving vaccine. No swelling of lip or tongue or throat. No rash. No shortness of breath. ER doctor on site evaluated and determined this was not likely to be an allergic reaction.	No current illness for this event.	Loratadine, Tums, Ozempic, Fluconazole, Atorvastatin, Lisinopril, Invokana
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	903514-1	Vaccine recipient was administered the vaccine at 11:30 am and then around 1:30 pm started to feel dizzy with hives and itching to his arms. The vaccine recipient was sent to the emergency department for further evaluation. There was an erythematous macular/papular rash on bilateral arms. He was administered diphenhydramine 12.5 mg IV, famotidine 20 mg IV, and methylprednisolone 125 mg IV. After reexamining, the patient felt much better, no dizziness, no itching, and no rash. He was discharge to home at 4:57 pm same day.	no	no
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	903522-1	After injecting vaccine the patient began to fell heavy tongue, dizziness and nausea. Vital signs: BP-205/161 mmHg, R:21, 97% oxygen saturation	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	903528-1	about 12 minutes after receiving the vaccine had a sudden onset of sharp headache while seated. When she stood up became lightheaded and dizzy and nauseous. She also had elevated Blood pressure p to 168/108. After 35 minutes her positional symptoms persisted with BP still elevated 159/102. No respiratory or skin symptoms. She was transported to the ED and had a head Ct which was normal, discharged with pain medications.	none	tylenol a few hours prior
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	903530-1	Additional to the symptoms previously reported I woke up with headache and thighs feeling heavy. Denied any current medical issues on her pre-vaccination questionnaire. During her observation period, Patient stated that she felt her ""throat was closing"". Pt assisted supine. Epinephrine and Benadryl given IM. Emergency protocol implemented. Dr. present. No hives, wheezing, or swelling noted. After treatment pt stated she is getting worked up for WPW syndrome. VS stable. Pt transferred to ED for monitoring 1040."	None	Prilosec, ASA
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	903702-1	I felt a little bit dizzy and tasted like saline in my mouth. I kept feeling dizzy, like I had a brain fog and felt lightheaded and nauseous, I started having tunnelling vision, my BP as high, I got confused and nauseous, had headache and was sent to ER to be observed. Had fever last night and still feel weird and still have headaches, treating it with tylenol. Took the day off from work since symptoms did not subside.	had covid around summer time but nothing within the last 30 days	Daily multivitamins, claritin, probiotic
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	903706-1	Pt with h/o of multiple environmental allergies plus latex. Received vaccine at 1115am and reported itching eyes and itching ears at 1129am. She was escorted via wheelchair to the ED for f/u treatment.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	903713-1	Patient reported feeling hot shortly after receiving her vaccine with an itchy arm. We provided and ice pack and laid her down on a stretcher. Patient became slightly erratic and we proceeded to wheel her down to ER. ER summary below. ED Course: Patient's pertinent past medical, social, family medical history were reviewed from both the nursing notes and the electronic medical record. This is a 27-year-old female with a past medical history as above presenting with a chief complaint of concern for urticarial rash in anaphylaxis following a COVID-19 vaccination. á I did speak with Occupational Health who stated that this patient is well-known to the hospital, stating specifically that she becomes very anxious with vaccinations/needles and breaks out in hives on previous injections. This information was given to his after her initial presentation. Patient had already been removed provided epinephrine given concern of possible anaphylactic reaction given her area, diaphoresis, pruritus and diffuse urticaria. á I was called into the room multiple times as patient continued to ask to be discharged. I did have multiple conversations with her in regards to need for continued monitoring given possibility of anaphylactic reaction. She feels that this was due to her anxiety and states that she is completely asymptomatic and at her baseline at this time. She once again is asking to leave. I did discuss my recommendation for continued monitoring as well as the risks of leaving without continued monitoring. The patient is able to choose, communicate and make choices clearly and understandably. The patient is able to understand risks, benefits and alternatives of therapy explained by myself. The patient can make a logical and rational decisions according to my assessment. The choice made by the patient is consistent with the patient's values and is consistent with character and decision capacity in the patient's past, according to friends and family present. There is no impending medical risk to this patient to warrant my holding the patient against their will. á Patient will be discharged in stable condition at this time with strict return precautions and instructions for close outpatient follow-up. She was provided EpiPen given possibility of anaphylactic reaction in the future.	NONE KNOWN	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904018-1	Injection site IMMEDIATELY felt hot, felt flushed from chest up to face, felt throat tightness, got tachypneic, tachycardic and lightheaded/weak. Throat tightness diminished after less than 30 seconds. I was immediately attended to. Was hypertensive 160/110's, pulse 140's, SPO2 100%. Less than five minutes later I developed uncontrollable generalized intermittent rigors. I was given IM Benadryl at that time. I was transferred to ED approximately 10min after initial reaction. Throat tightness came back again while in ED, EpiPen administered. PO Famotidine and 1L IV fluids given. Rigors diminished but lasted approximately two hours. I was observed in ED for four hours, felt well, VSS, was discharged home. Once home approximately six hrs post inoculation I developed more intense throat tightness, radiating to right jaw, no difficulty breathing. It resolved on its own in less than five minutes. Developed a mild headache the next day.	None	None

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904159-1	"Nurse injected the vaccine as she removed needle the employee started to feel weak and short of breath. The employee repeated said ""I am weak"" and ""I can't breath."" A rapid response was called, checked her oxygen level (94%). Due to employee stating she could not breath the team gave her a dose of epinephrine and started oxygen. Her oxygen saturation increased to 98%. They took a blood pressure - 150/88. EMS arrived and took her to local hospital for observation."	None	Birth control
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904161-1	"stated she felt ""hot, dizzy, tingling to face"" HR 84, BP 129/84, O2 Sat 97% RA, temp 100.4. Taken to ER for observation."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904162-1	I received my vaccine at 1615 down in our hospitals clinic, I work as a floor nurse, I returned back to my unit to resume work, I walked in to talk to my charge nurse and felt completely fine within a minute or to (approximately 15 minutes since the vaccine was given) my legs felt like very weak, they became tingly and extremely heavy, my face and chest felt warm and I had to sit down to drink water. The nurses working with me that day took my vital signs, my blood pressure was 157/101, heart rate 80-90s and temp was 97.5F. I notified the pharmacist working on our floor about my symptoms and he directed me toward the infection control line, the pharmacist on the phone directed me to go to the emergency department. When I was admitted to the emergency department via wheelchair, the pharmacist met me there along with the Emergency medicine MD, a neurological exam was done and general assessment. While I was in the ER my heart was monitored, my CBC with diff, Mag and BMP was monitored all of which were normal. I was given a 1L bolus of IV LR through an IV in my left antecubital. Gradually the tingling wore off over a few hours in my legs bilaterally however they still felt very heavy. I was admitted from approximately 1645 until approximately 1900 and returned home.	Was seen at my primary care provider for chronic upper abdominal pain but my lab work came back unremarkable.	Wellbutrin XL 150mg daily Buspar 5mg BID Singulair 10mg daily OTC gummy Multivitamin daily

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904231-1	About 3 min post vaccination I experienced a transient sensation of warmth in my chest followed approx in a minute by tachycardia and a slight tightening sensation at the base of my throat which was transient - may 15-30 seconds. It recurred in a few min and I began to feel little lightheaded . With a 3rd episode of tachycardia only I felt more lightheaded and was taken to the ED in a wheelchair. My extremities felt cool with each episode as well.	None	Pepcid AC on occasion
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904237-1	Approximately 45min after the injection, I started feeling dizziness, palpitations and racing heartbeat. Another 15min after that there was red hives that broke out on my upper chest but no where else on my body.	None	Levothyroxine and avlimil
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904245-1	I felt fine other than a sore arm but then Friday morning I woke up coughing and i had a 100F fever and about an hour later it was 100.6F. I had chills, shivering, headache, took tylenol, fever was down to 100F. Went to the local UC and had a COVID 19 test and was negative (rapid test). Today I woke up, no fever, a headache in the morning, but now it is gone, no fever at all today.	no	no
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904246-1	"Patient reported feeling sensation of ""warmth"" around 5 minutes post immunization. 4 Patient was escorted to waiting area and sat in seat within range of nurse site line. 4 RN later sat with patient 5 minutes later as she continued to have feeling of ""warmth"" / flushing. Patient given water and moved closer to nurse area. 4 Patient then shortly after c/o light headedness and now feeling cool. Remains alert / oriented. 4 BP: 142/80 HR: 127 RR: 20 SPO2: 100% 4 ICC called. Medic and Dr arrived for patient handoff. RN escorted patient to ICC with Medic and MD following. 4 Patient to finish visit in ICC for final dispo."	No current illness for this event.	NONE
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904248-1	Throat closing, feeling faint, fast heart rate. Was taken to er, was given epinephrine as well as steroids. Kept me on er for awhile to watch me.	No	No
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904253-1	20 minutes after receiving vaccination, tingling tongue. 'first sign for shellfish reaction', noticed tongue swelling. took 2 benadryl @130. at 1:45 took Albuterol, got to hospital / ER at approximately 2pm. Elevated BP, HR increase, lungs tight and 'barely diminished'. Epi @ 4:25 Albuterol @ 4:35 Prednisone @454 IV pepcid @5pm Tongue was still swollen but improved, lungs stable. Discharged at 6:10. Continued Benadryl and med pack. F/up appt w/ Allergist the following week;	N/A	Aimovig; albuterol inhaler;zyrtec; flonase, merana IUD, multivitamin; ambian, symacourt day and night; symbicort; oral nystatin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904263-1	Within 5-10 minutes after vaccine given, patient started feeling tingling of the hands and fingers. Shortly after, she felt the need to clear her throat because she felt like there was a furball in her throat. She drank some water, which didn't help. She then started feeling hot and became flush. She then felt her inner ear and tongue swelling. Shortly later, she felt chest pain and felt like she couldn't breathe. She was given IV Benadryl 50mg, IV dexamethasone 4mg, and IV Pepcid 20mg without symptom resolution. Epipen was administered by vaccine clinic staff, and the patient felt a little better. Her shortness of breath continued and her chest felt heavy as she was transported to the ED. She also complained of blurred vision, which could have been due to Epipen administration. In the ED, the patient still felt that her throat was tightening up. She was given IV Pepcid 20mg, IV Benadryl 25mg, IV SoluMedrol 125mg, racinephrine & albuterol nebulizer. By 2:150, she felt better. By 2:257, she did not have any more tingling in hands or weakness and she stated she felt she was back to normal. Patient discharged home in stable condition at 2:336.	none	Loratadine 10mg daily, Epipen 0.3mg PRN severe allergies
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904270-1	Employee has history of allergies and was being monitored for 30 minutes. About 10 minutes the vaccine injections she began to feel faint. She was sitting at time and slide to floor and was unresponsive. The team begin checking vital signs and gave her a dose of epinephrine. A rapid response team and EMS was called. The rapid response team checked vitals: BP 100/60, HR 90, O2 99%, Glucose level-77. An IV was started and bolus of normal saline 500 ml given along with 50 mg of benadryl. Vitals checked: HR 108, BP-105/60, O2 93%-it was reported she was cold and shivering-hands were cold. Employee was calm, alert, and oriented.	None	synthroid
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904271-1	12/17/2020, 15 minutes after vaccination started to experience tingling on forehead and radiated on left side of face, nausea, light headed, HR increased, 'funny on tongue', 'felt like going to faint'. The BP was 149/109. The medical crew tried to calm down. BP would not come down. Placed in gurney, administered oxygen, given a 'benadryl and some sort of shot' to slow down the reaction. Given rest of the day off. 'I slept for a few hours' and after 4 hours, my chest started to tighten, radiated to back 'tightness', felt like heartburn. I didn't sleep that whole night, had to keep sitting with the tightness in the chest. By morning I was better, I went to work, took inhaler (flovent and albuterol). Headache at work, took Tylenol. At 12, I went to each lunch and felt there was a lot of mucus in throat / acid reflux feeling ; 'felt full in throat'. I went in a coughing spell, 'bubbly mucus'. I couldn't talk, drank water, sat in car until I had to go back to work. I couldn't breathe when I walked back into work. At approximately 2:15 they rushed me to urgent care, 25 childrens benadryl, administered oxygen and omeprazole for reflux. I stayed with the oxygen till 4:45; BP 140/98 and slowly came back down. 'At same time, co worker was experiencing same thing that just had had vaccination'. My asthma 'kicked in', white blood count was elevated to 17. Work in urgent care and where i was rushed to. flu shot 2 months prior TB skin test one month prior; negative	thyroid 'has been off'; 'given 6 weeks to see if levels go back to normal', 'only checking T4', 'getting weird bruising', blood panel testing a week prior to vaccination	Levothyroxine; multivitamin; flovent; albuterol
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904276-1	10 minutes after vaccination felt lightheaded and dizzy, pulse 64 resp 18 - given water and put feet up. 15 minutes later better but still woozy - pulse 80 resp 20. 15 minutes later walked around pulse 72 resp 18 20 minutes later - still feeling dizzy wishes to go to ER - transported via wheelchair.	12/5/2020 - sore throat, malaise, fever 101.0 sore throat. Test negative for covid 12/5/20 (rapid) and 12/9/20 (pcr)	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904278-1	Tingling of tongue, tickle in throat Benadryl 50 mg IM given Patient taken to ED	Unknown	Unknown
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904279-1	Patient began reporting a feeling of light-headedness 5-10 minutes after injection. Also reported nausea and feeling clammy, as well as numbness and tingling of both her arms. She laid on the ground in reverse trendelenberg position with some improvement in symptoms, but upon sitting upright, symptoms returned. Patient was transported to the ED for 1 L NS IV bolus with improvement of symptoms and discharge.	None	Unknown

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904337-1	Immediately (no delay) after injection, tingling in arm followed by flushing of face and subjective SOB, no wheezing noted, face and anterior chest with uniform erythema, no hives. Epinephrine administered immediately by vaccinating nurse. No further development of symptoms. Developed some palpitations and chest discomfort - normal EKG. Discharge home after 6 hour observation, no recurrence of symptoms.	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904343-1	I was monitored for 15 minutes and felt completely fine and left the location. On my way home approximately 25 minutes after my vaccination I felt a tingling and numbness in the back of my throat. I decided to call the center and let them know how I was feeling. They suggested I return. During the 10 minute ride back the tingling and numbness had progressed to the back of my tongue. Once I arrived there they continued to monitor me and my symptoms remained stable with numbness in my throat and back of my tongue. I was not having any difficulty breathing and felt otherwise fine. There was a concern that the symptoms would progress and they initiated EMS. I was taken via ambulance to Hospital where they continued to monitor me and check my airway. In route to the hospital I was hypertensive with a BP of approx 190/100. I did not ask what my heart rate was. I was surprised my blood pressure was so high. They said it was probably because I was nervous however I was not feeling nervous because I knew since I could breathe I really was fine, and sending me to the hospital was simply out of an abundance of caution as this vaccine is new. Upon my arrival they took my blood pressure again and it was 140s/80s I believe with a heart rate of 106. My O2 sat we're in the upper 90% throughout the situation. My blood pressure tends to be in the 110s/70s with a heart rate in the upper 60s to mid 70s. So it was surprising to me that I was hypertensive and tachycardic despite not feeling like my heart was racing or that my blood pressure was high. I felt completely fine other than the numbness in the back of my throat and tongue. Since the symptoms remained stable and there wasn't really anything for anybody to do they did release me. Between 6:30 and 7 PM I noticed the tongue numbness was subsiding. By 8 PM my throat felt completely back to normal.	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904353-1	Coughing, chest tightness, decreased saturation, itching forehead and back, rash on upper back	none noted	Klonopin Prozac Wellbutrin Lexapro Citrucel Singular Albuterol PRN Advair Zofran prn
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904355-1	Patient received vaccine at 0845 and left after the specified 15 minute waiting period. At 0940, the patient returned to the vaccine clinic stating that he was short of breath and his throat felt tighter than before. Arm examined and no hives or redness present, patient denied itching and hives. Patient denied that throat tightness was getting worse. PharmD and RN present and took vital signs and called house manager. Verified NKDA and then administered 25mg of PO diphenhydramine. Pt then transported via wheelchair for further workup.	No current illness for this event.	25mg oral Diphenhydramine

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904358-1	Patient complained of tingling lips and tachycardia, BP 159/90 HR 105. RRT called. Patient transported to Emergency Department.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904359-1	Within 5 minutes, started feeling very tired and dizzy, leaned head back trying to relax. Approximately 15 minutes after vaccine had seizure lasting up to 15 seconds possibly. Brought to floor carefully. Then had small second seizure (about 5 seconds in duration). Difficulty Breathing immediately. Then extreme trouble breathing/stopped breathing , given 0.3 mg EpiPen in right thigh, gasped and began breathing again. Checked pulse (80 bpm) then waited about 3 minutes and EMTs arrived. BP was 140/90 ish. Both higher but not terribly high.	n/a	Losartan 50mg QD, Loratadine 10mg QD PRN, Albuterol Sulfate HFA (Proair Inhaler), Symbicort 160/4.5 Inhaler,
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904364-1	I am an employee of Medical Center. I went to Hospital for my vaccine since it was only 5 minutes away from my house. At 5:00 PM I received the vaccine. 10 minutes after I noticed my throat felt tight and as if it was closing. This felt similar to the reaction I felt when I had morphine in Jan 2020 (that I am allergic to). I notified the nurses and they watched me for 10 minutes. It then stayed the same. They brought me back to their tent area and gave me 50 mg of benadryl. I immediately felt relief. However, maybe 3-5 minutes after the throat closing sensation came back. They then had to take me to the ER. I was then put on fluids, steroids, pepcid, and ativan. I was released after they watched me for a couple hours.	None	Oxcarbazepine, quetiapine,levothyroxine, lorazepam

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904516-1	Pt stated she felt dizzy/lightheaded while on her phone nearing the end of her observation period. She got up to leave stating she thought she just needed fresh air and promptly returned to the observation area with dizziness and palpitations. This was 45 minutes roughly post vaccine administration. B/P and heart rate were elevated. Pt began feeling short of breath and a rapid response was initiated.	N/A	unknown
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904519-1	Elevated blood pressure Dizziness and heaviness in legs Went to ER to be monitored and sleep Lasted about 6 hours	No current illness for this event.	Vyvance adderall propranolol lamictal
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904534-1	About two to three minutes after the Covid vaccine was administered in the vaccine clinic at my hospital where I work, I began to experience pre-syncope symptoms (mostly light-headedness and nausea). I stood up to get help and walked to the back of the auditorium where they were observing us for 15 minutes post-vaccine, and due to standing and walking, I became much more dizzy and lightheaded and then sat down on the floor and was eased to a lying-down position on the floor by a nurse as I briefly lost consciousness. I regained consciousness very quickly (maybe 10-20 seconds, but I'm not sure) and was taken care of by a set of nurses who noted me to be hypotensive and pale, with I think a bit of a lower heart rate, though I'm not sure what my vitals were exactly. They had me then stand to do orthostatic vitals and I was orthostatic. I was too dizzy to remain standing and felt very nauseous so I was taken to the ED (in the hospital where I work) to be observed. I had a normal EKG, blood glucose, and urine sample there. After having some juice and lying down, I felt better but was very cold and had some chills. After a little over an hour, they released me from the ED and it seems to have all been an episode of vaso-vagal syncope. I've had vaso-vagal responses before, but not in response to a vaccine since I was about 13, so I was surprised by how quick and severe the vaso vagal response was. Later in the day, I felt better but was fatigued and had a headache. I also had a lot of pain at the injection site. The day after the vaccine I felt tired and had a headache, and for part of the day a mild sore throat. Now two days after the vaccine, I feel much better, and the arm pain is more mild.	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904535-1	About 5 minutes after the injection I felt lightheaded/ presyncopal lasting about 5 seconds. I had several more episodes of the same symptoms over the next hour. My vitals were checked after the first episode and my pulse was 130 with blood pressure 179/99 and oxygen sat was in the high 90%. I was taken on a gurney to the ER. I was told my blood pressure and pulse improved a few minutes after the initial episode and I was observed for 2 hours with resolution of my symptoms.	No current illness for this event.	Humira, mesalamine, amlodipine, rosuvastatin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904540-1	Pt was found lying on cement at base of steps. Recovery RN called outside to the back. Patient was alert & oriented. Stated that he fell and landed on the cement walkway. Complained of left food pain and said he heard a crack when he fell. 911 was called per patient's request. Was able to talk inside with assistance and Vitals obtained (stable). Noted swelling in posterior back of ankle, pain with palpitation. Ice was applied. 911 arrived and taken to hospital	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904544-1	received COVID-19 vaccine on 12/19 at approx 1750. At 1804 pt c/o headache, racing heart, itching, and shakiness. Vaccine Commander called rapid response team (RRT). Upon arrival of RRT pt c/o increasing sx. Pt escorted via wheelchair to ED.	Unknown	Levonorgestrel (MIRENA) 20 mcg/24 hours (5 yrs) 52 mg UTRN IUD
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904546-1	Approximately 10 minutes after the vaccine was administered, reported starting to feel light headed, sweaty and nauseous. Then reported throat was feeling tight and RN on site reported hearing change in breathing. RN administered EpiPen and called 911. EMS responded and transported to ED. ED record shows resolved symptoms. No rash, edema, difficulty breathing. In ED was monitored and discharged. Received no medications or additional treatment in ED.	None.	Claritin PRN for seasonal allergies
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904549-1	Patient developed flushing, diaphoresis, tachycardia approximately 7 minutes after injection into L deltoid, while waiting under observation. The symptoms resolved spontaneously after approximately 3-5 minutes. Patient was then observed for 45 more minutes and felt fine the entire time. Upon leaving to have her spouse pick her up, patient developed symptoms again while walking out of the building. Patient was then taken to the emergency department for further monitoring. Telemetry and further observations for 4 hours revealed no further abnormalities and the patient was discharged home with no more issues.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904558-1	Patient was sitting in a chair approximately 20 minutes after vaccine administration when she became pale and quiet. Monitor asked if she was ok, and she said she was itchy on her face and that her feet were really hot and hives were noted on her cheeks and forehead at 1803. She was moved to a bed with help from other staff and the rapid response team was called. Her blood pressure was noted to be 155/101, HR-115, O2 sat 99% on RA at 1807. 50 mg IM diphenhydramine administered to L arm by RN. Patient exported to ED for further evaluation.	unknown	acetazolamide almotriptan cholecalciferol citalopram cyclobenzaprine etonogestrel-ethinylestradiol fremeazumab-vfrm hydrocodone-APAP 7.5 ibuprofen ketorolac spray levodroxine milk thistle MVI mupirocin ointment norethindrone acetate pant
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904562-1	Generalized Rash all over upper torso with feeling itchy. Apparent to RN at approximately 15 minutes post vaccination. Patient (Health Care worker/employee) did not seem aware until it was brought to his attention. 15mg Benadryl administered and sent to Emergency Department for observation. No further symptoms occurred and patient dismissed.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904569-1	My symptoms started 30 minutes after the injection. My throat and tongue started to get very itchy and scratchy. I had to keep clearing my throat. My throat felt thick with secretions.	Sessional allergies.	Synthroid 112 mcg
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904580-1	Pfizer-BioNTech COVID-19 Vaccine EUA Chest pain starting evening after vaccination and continued through 12/19/20. The chest pain is described as dull/heavy and continued to get worse so was advised to go to the ER. I went to the ER at 7pm on 12/19/20 and had 2 EKGs and blood drawn. It is 12/20/20 today and I still have constant mild chest pain with times that it feels moderate.	No	None

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904818-1	Within 10 minutes after the injection my left shoulder began to itch was super red and hot. I notified them and per policy I was transported to the ER and was given IM 50mg benegryl, 40mg oral prednisone and I was monitored for another 1.5hr. 1/2 after the benedryl I still had the redness and flush in the neck and chin area the chest area redness had cleared up. I was released with a prescription of benedryl for 4 days to take every 8hrs for the symptoms. I continued with the benedryl for the next day and the symptoms subsided a little so I stopped taking the benedryl and I continued to take the prednisone.	No	No
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	904821-1	So I got up from the chair to go to the other room to be on the 15 min observation. I started feeling a little weird within a minute. A sharp shooting numbness in my jaw and my head felt a little dizzy, and a burst of heat in my spine. I felt off and sat down and took my BP and my BP was 185/80. Within a couple of minutes I was at the walk in clinic where they monitored me for a couple of hours. The jaw experience went away but I still felt a little shaky. I also had a numbness/tingling in the face and jaw. They gave me a Benadryl injection and it did not resolve. They gave me prednisone it felt a little better (about 30min) afterwards. They checked my airways and it was ok. I had elevated BP but within a couple of hours it was ok. They discharged me since I felt ok and a friend drove me home. Symptoms were better next day but in the afternoon I felt the numbness again on my lips. They decided to prescribe me medro and I started taking it since Friday evening. I still feel a little head ache and like I am a little sick. The headache is still lingering. Left side of my face since yesterday I have a stiff neck. It is like a pain in my face. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905592-1	Started with slight headache and sore arm, felt tired and diarrhea about 5 hours past vaccination - 3 bowel movements within 1 hour. That night around 1:30AM (next morning) I felt a little itchy all over with a throat irritation and I took some Benadryl. Just itchiness and sore throat, no fever. Had pretty bad fatigue on the 17th and had nasal congestion, cough, chills, sneezing. I worked on the 17th but felt terrible throughout the day. Got home and I could not eat anything , could not hold anything on my stomach. On the 18th at night woke up with sweats, no fever, dry cough, nausea. Chest discomfort (minor chest pain - was sure was not cardiac, could be acid reflux). Woke up with nausea and irritation and intermittently felt fatigued and would feel better, throughout the day. Also felt back pains on the 18. That same evening I felt a little better and then on the 19th I had some shortness of breath. I then decided to go to the UC on Saturday the 19th and got a COVID test. Sore throat was gone but still feel back pain and nausea. Around 11PM on the 19th I got itchy again in my arms and chest. Also got chest pains and took a Pepcid and Benadryl. On the 20th I am feeling a little better, still have a cough and some stomach upset and headache (in the AM). About 1:30PM diarrhea came back again. Had it 2X and low back pain and abdominal pain and also chills. There was a time I could not take care of my kids I just had to stay in bed (19 and 20th - I spent in bed most of the day). My heart rate has been good. The evening of the 20th I felt a little bit better and able to eat a little bit easier. This morning felling a little better. Had diarrhea this morning and a headache that I can't get rid of. Took Tylenol but it has not helped. Also low back pain.	no	Zyrtec, multivitamin, B12, Iron
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905602-1	Leg pain, back pain, chills, fever, headache. Unable to walk or stand still for more than a minute. Unable to sit upright back pain travels to mid back.	None	None

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905702-1	Anxious, tachycardiac and hypertensive.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905706-1	mild fever; chest pressure; dizziness; This is a spontaneous report from a contactable consumer. A 29-year-old female patient received dose number 1 of BNT162B2 (solution for injection, lot number EH899/expiration date unknown) via an unspecified route of administration on her right arm on 16Dec2020 at a single dose for immunisation. Medical history included penicillin allergy and allergies to gluten. Concomitant medications were not reported. The patient experienced chest pressure and dizziness that later turned into a mild fever on 16Dec2020; all of which prompted visit to the emergency room/department or urgent care. The patient received Tylenol for the events. The patient did not receive any other vaccines within 4 weeks prior to the COVID-19 vaccine. She was not diagnosed with COVID-19 prior vaccination and was not tested for COVID-19 since vaccination. The outcome of the event was recovering.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905738-1	Right hand felt cold at first but that sensation has subsided; Within less than 10 minutes I had a warm tingling feeling; heaviness in my legs which still continues over an hour later; Dry mouth; This is a spontaneous report from a contactable consumer reporting for herself. This 44-year-old female patient received on 17Dec2020 10:00 first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine, lot EK5730) at single dose in the right arm for immunization. Medical history included reflux. No allergies to medications, food, or other products. Concomitant medications included omeprazole (PRILOSEC). On 17Dec2020, within less than 10 minutes, the patient had a warm tingling feeling, heaviness in her legs which still continued over an hour later. Right hand felt cold at first, but that sensation has subsided. Also had a dry mouth about 15-20 minutes after the vaccine. All symptoms subsided after 2 1/2 hours. Patient went to emergency room. Final outcome was recovered on 17Dec2020.	No current illness for this event.	PRILOSEC [OMEPRAZOLE]
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905746-1	Immediately after receiving the dose of vaccine, rash, tickle in throat taken to ED treated with Benadryl on 12/20 developed swollen lips taken to ED treated with epinephrine, steroids, Pepcid discharged from ED 12/21/20 symptoms resolved	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905754-1	Patient got dizzy immediately and wanted to sit down, he also stated he was short of breath. His blood pressure was 160/111 and pulse 107. Rechecked shortly after that blood pressure check and it went to 176/115 and pulse 138. Patient stated he was feeling well and requested to go to ED, staff called 911.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905764-1	This is a CCU nurse who received vaccine on 12/18/20 and later that day while at work developed nausea, vomited x1, became tachy and pale. Coworkers provided basic care. Patient went to ED at approx. 4p that day and was later discharged.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905775-1	Nausea, lightheaded, some throat swelling, difficult to swallow. Transported to ED. No respiratory distress. Stable	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905781-1	headache; dizziness; nausea; This is a spontaneous report from a contactable other health professional. A 56-year-old female patient received bnt162b2 (BNT162B2), via an unspecified route of administration on an unspecified date at single dose for immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient experienced headache, dizziness and nausea on an unspecified date with outcome of not recovered. The patient received the vaccine in the emergency department. The reporter stated that the symptoms began immediately after getting the vaccine and are persisting. Information about batch/lot number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905786-1	5 days after vaccination on 12/20, patient developed a mild, erythematous rash on left hand (dorsal) and forearm. The character of symptoms is redness, no pain, no itching, and no swelling. Radiating symptom(s): spreading proximally. The degree of symptoms is minimal.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905787-1	Initial arm pain, then nausea and dizziness while at work 2 hours after administration. Presented to the emergency department at the same facility where he works as instructed per occupational health. Symptoms were almost fully resolved 3 hours after receiving the vaccine, after a dose of ondansetron. Patient discharged and instructed to follow up with primary MD.	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905814-1	Patient developed hives 30 minutes after receiving injection. Received Benadryl and seen in ER for evaluation. No further issues reported.	unknown	Unknown
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905826-1	sent to the emergency room for body rashes and hives.; sent to the emergency room for body rashes and hives.; This is a spontaneous report from a contactable pharmacist. This pharmacist reported similar events for 4 patients. This is a third of four reports. A patient of an unspecified age and gender received BNT162B2(Solution for injection) via an unspecified route of administration on an unspecified date at single dose for immunization. The medical history included allergies to bee stings. The patient's concomitant medications were not reported. The patient sent to the emergency room for body rashes and hives. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Linked Report(s) : US-PFIZER INC- 2020502532 same reporter, drug, event different patient	No current illness for this event. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905896-1	Patient observed for over an hour due to symptom development including complaints of pressure in head, diaphoretic, swelling and increase muscle tone/rigidity in her left arm, tongue feeling thick. Brought to ED for care after an hour of observation. In the ED, left arm rigidity/spasm worsened. Here is the physician note: Patient's headache is improved. She has no neurological deficits or subjective complaints or objective exam consistent with a recurrent CVA. She has no evidence of significant anaphylaxis related to the immunization. May be a recurrence of her underlying medical problems that she has been seen by neurology for something similar. Possible unmasking of this is related to the Covid vaccine is difficult to determine. We will have her work individually with our pharmacy, infectious disease team to determine whether she is a candidate for a second vaccination. She would like to return home right now her CT labs are otherwise unremarkable I think this is reasonable. Return precautions for more significant etiologies were discussed at length. Received lorazepam 0.5 mg IV x1, diphenhydramine 25 mg IV x1, and methylprednisolone 60 mg IV x1.	See Item 12.	Carafate 1 g/10 mL oral suspension: 1 gm, 10 mL, Oral, QID(ACHS), 1200 mL, 1 Refill(s) Depakote ER 250 mg oral tablet, extended release: 250 mg, 1 tab, Oral, BID, 60 tab, 11 Refill(s) Eliquis 5 mg oral tablet: See Instructions, take 1 table

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905929-1	Received the vaccine Wednesday evening, after work. Waited the recommended 15 minutes, then went home and went to bed. Woke up Thursday feeling fatigued and had injection site pain, no other side effects or fever. Thursday evening, I developed body aches and a low-grade fever. I took Tylenol and went to bed. Friday, when I woke up around 1pm, I noticed a small rash behind my left knee. I took Benadryl and ended up falling back asleep. When I woke up Friday evening, I had the rash, and hives, and red/white spots all over my legs. I took Benadryl and consulted my doctor. The rash continued to spread to my arms, and stomach. The rash itched and burned. I went to the ER Friday night for it. Before they gave me medication, I started coughing, couldn't breathe for a minute, and got lightheaded. They gave a steroid, Pepcid, Benadryl, and fluids. They observed me for several hours. I felt better then was discharged. They told to continue to take Benadryl or Zyrtec for a couple days. 5 days later, the rash/hives are still red, itchy and present, especially when Benadryl wears off.	Vitamin D Deficient, Iron deficient	none
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905950-1	Burning pain in site, starting to get numb down my arm, pain on side of breast going down to rib, chest pain in the middle ..	None	Zoloft, vitamin b12, vitamin D
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905960-1	Sustained HR 130's for 20 minutes, no chest pain, no SOB, taken to ED for evaluation.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905964-1	After administration, employee stated feeling dizzy; place head btw knees; continued feeling dizzy; place employee lying on floor on side and attempted to give OJ - blood sugar 80; no LOC; called rapid response; vitals and EKG WNL; transported to ED via gurney; seen by ED MD; D/C home.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905965-1	Patient received Pfizer COVID-19 vaccine on 12/21/20 at 15:24. Approximately 10-12 minutes later she reported having chest tightness, became pale, diaphoretic, short of breath, and looked unwell. She also had a feeling that the her throat was closing. She was given EpiPen 0.3 mg Iq. She had a reaction to Benadryl IV in the past, so we refrained from giving her an IM injection of benadryl. She did not feel like she could swallow so we did not give her benadryl. After EpiPen Injection, she immediately looked better and was taken to the ER for further workup and observation. Of note, she mentioned an unspecified allergic reaction in the past. In the ED she was given pepcid IV, solumedrol IV, and a bolus of saline.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905971-1	COVID Vaccine administered 12/21/20 @ 15:16 and about 15 minutes later, pt reported feeling tachycardic. She felt short of breath and had a tingling sensation on her tongue. 25 mg of benadryl PO was given to her at 15:30. She continued to feel SOB and her voice sounded much more compromised so an additional 25 mg of benadryl PO was given and she was taken to the ED for observation. In the ed she was given prednisone and pepcid.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905972-1	Shortly after receiving vaccine she began to have a scratchy throat with some mild increase work of breathing. No distress. Transported to ED for further evaluation and discharged to home approx. 2 hrs later.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905973-1	Shoulder joint pain. Both sides but more on my right side. Had same pain sensation my back, right side. A few seconds. Right elbow pain sensation. Left calf pain sensation. few seconds. Wave of dizziness and feeling weakness. Experienced it 3x. Had a sensation of little itchiness similar to my radish allergic reaction. Drop and spike of blood pressure Some swelling of eyelids. Lasted for 30 min. Pain in between left knuckles Left shoulder back pain lasts few seconds Left upper shoulder warm sensation a 2-3 minutes, Consistent warm slight burning pulsing pain sensation Right forearm warm burning sensation no pain. Pain in right hip, lasted few seconds. Sudden fatigue feeling suddenly extremely drained	None	Advair & Albuterol

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905990-1	Approximately 45 minutes after the injection, I felt a gradual tightening of my chest. I took about 6 puffs of my Albuterol inhaler over the next 45 minutes and still got no relief. The pharmacist took me back down to the clinic where I was told to then go to the ER. My blood pressure was 204/133 and my pulse was 136. The doctor determined that I was having a severe allergic reaction to the vaccine. I was given an epinephrine injection, 10mg of Decadron and 50mg of Benadryl. I was monitored for between 3 and 4 hours in the ER before I was discharged. The doctor told me that I should not receive the second dose of the vaccine.	None	Diltiazem CD 240mg Daily; Soliqua 100-33 15units Daily; Meloxicam 15mg Daily/PRN; Rosuvastatin 10mg #2 tabs Daily; Glimepiride 2mg Daily; Losartan 100mg Daily; Venlafaxine XR 37.5mg Daily; Lorazepam 0.5mg Daily/PRN; Albuterol Inhaler 1 or 2
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905992-1	Began with pinkish neck and chest approximately 15 minutes post vaccine administration. Within 10 minutes of further observation, more reddened splotches noted on chest, and c/o tightness in chest. Taken to ED via wheelchair immediately. Treated with Benadryl, solumedrol and famotidine. Pt discharged to home within 2 hours.	Denied recent/current illnesses	Denied taking medications
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905993-1	"The patient was in her normal state of good health prior to the vaccination. Almost immediately after receiving the vaccination, she began having a headache, then got an urticarial rash. She then felt a ""lump in [her] throat."" She was coughing uncontrollably. She was brought immediately to the Emergency Department where I assessed her with my resident. She had signs of a Type I Hypersensitivity Reaction including a hoarse voice, globus feeling and diffuse urticaria. She was treated at the vaccination site in the hospital with Benadryl 50 mg PO prior to ED evaluation and she self-administered Ibuprofen 400 mg. She did not have stridor or airway swelling. She was able to speak in full sentences. She was NOT treated with epinephrine, as she was in stable respiratory condition and improved with Benadryl (as previously administered at the vaccination clinic, Pepcid IV and Solumedrol IV. My concern over this reaction is that the patient has NO PRIOR HISTORY OF ANY ALLERGIES AT ALL. I have read and seen in the media reports of anaphylaxis with a history of allergies, however, this is the first case I have heard of regarding an anaphylactoid reaction in a patient with no prior history."	NONE	Estrogen and Progesterone

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	905999-1	Employed as a nurse at this hospital. Around 8 PM she received her COVID-19 vaccine. She waited the 15 minutes she was required to wait and then walked to her car. She reports that as she walked to her car she had a pain in her left shoulder which was short-lived but followed by numbness and tingling of her left arm and the left side of her face going up the back of her head. Symptoms started around 8:20pm. She reported back to the clinic to report the symptoms--she lives along and wanted to be assessed before going home. In the clinic, she was assessed by myself. Employee noted that she had not eaten. She ate in the clinic and had something to drink. While in the clinic over the next 10-15 minutes, she noted that she had some numbness and tingling in her feet and calves bilaterally. No leg pain or swelling. Around 9pm, the clinic was closing and she could no longer be monitored under observation. She opted to go to the ER for observation. Per ER note-- She denies any headache. She denies any left-sided weakness. Patient is right-handed. She also reports some mild chest heaviness that lasted for about 20 minutes and then resolved. No shortness of breath. No dizziness, syncope or presyncope. No nausea or vomiting. No rash. No visual or speech changes. No ataxia. Patient continues to have the left-sided numbness and tingling but states that it is less intense than it was. She denies any other complaints. Follow up this AM-- Pt is only fatigued and has some muscle soreness where she had the vaccination. All of her symptoms have resolved and she is not having any further sxs of chest tightness or numbness	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906000-1	pt was given the vaccination for COVID on friday the 10th (2 days ago) had moderate aches and diarrhea yesterday and began to have rash on Saturday . Pt is a nurse where there has been a large number of children with gastroenteritis. Pt with h/o immune reaction (? Stills disease) where she breaks out in a urticarial rash ,previously only with illnesses in the past Now pt has a rash. However Pt states this rash feels different to her normal one and she has never had a reaction like this to vaccine before. The rash began similarly to how it usually starts on upper ext and then spreads to trunk now she has swelling around eyes and rash is getting worse. benadryl ineffective pt also has swelling around her eyes and overall with irritation which she has not experienced before. pt was sent to the Emergency department for full evaluation concern for sjs type reaction with	none	none
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906001-1	Right after the injection I became acutely lightheaded. I tried to wait it out and it improved somewhat but not all the way. I then started to drive home after the 15 min. observation period. About 5 min into my drive home, I developed trouble swallowing/throat tightness and worsened lightheadedness. I called 911 who stayed on the phone with me as I drove back to the hospital. It started to improve rather soon and was resolved within 30 min later.	None	Synthroid 50 mcg daily, Fish oil/curcumin supplement 1000 mg daily
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906002-1	2 min post injection developed tingling around site, and then urticaria on left upper arm. Then diffuse flushing diffusely and headache, HR=130's, normal BP. Difficulty swallowing during EMS transport. Received Epi sc, Pepcid IV, and Benadryl 50mg IV PTA. HR+140 on arrival post Epi 6 hour obs. NS 1L D/c home with precautions, epilepsy pen rx, and allergist follow-up	None	None. Took and oral Pepcid and Zyrtec around noon on 12/21/20 in anticipation of possible symptoms from vaccine.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906006-1	Within 3 minutes of receiving the vaccine, I felt a fluid like sensation trickle down my right bicep. I think proceeded to feel tachycardia, dizziness, lightheaded, and was hypertensive. My chest appearance was red and blotchy as well as my face. I was monitored in the ED for 2 hours. My vitals stabilized and the redness dissipated. I continued to feel a bit anxious and a headache. I was told to go home, take Benadryl as needed, and to follow up with an allergist.	N/A	Nuvaring Garden of Life Multivitamin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906007-1	About 10 minutes after the injection I felt something in my throat like when I have a sore throat. I was checked by the nurse and she said my pulse is beating a little faster. My breathing was fine. I was brought to ER and my blood pressure was elevated than usual. About almost an hour after the vaccine my forehead started itching and but I was given benadryl so my hives didn't continue to develop.	Headache	Elderberry supplement and Zyrtec
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906009-1	Full vial of 0.3ml concentrated vaccine administered undiluted with normal saline.	none	unknown by reporter
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906026-1	around 1730 Patient was given vaccine and d/t allergy history was brought in the 15 minute observation. Patient stated that she was feeling dizzy and throat feeling funny also the same way when gets the flu shot. Patient was kept in observation while being monitored and Code Blue Team arrived d/t the possibility of an anaphylactic reaction.	not listed on the report	none
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906030-1	Around 0800 the patient got her vaccination. During the registration process, she was seen by An Employee (Pharmacy) and associate stated that she never had any allergic reactions in the past and filled in both forms that she does not have any allergic reactions to either the vaccine components, food, and medication. She was then escorted to the Observation room for 15 minutes where she felt dizzy at first. The observation nurse and pharmacy was also present at site. After a few minutes, associate complained of more dizziness, some tightening of the jaw but was still able to speak and swallow. Associate was then given Benadryl around 0804 and connected to the vitals machine for continuous monitoring. Around 0806 patient was feeling worst and Observation RN took her vitals and her HR went down to the 30's associate was given epinephrine and hence the CODE BLUE was called on 0807. During the CODE BLUE, ED was notified, and a gurney was sent to the Observation Room. Patient was then transported to ED for further evaluation and observation.	None per patient	None taken when asked
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906031-1	35yo female urgent care physician in normal State of Heath when while seeing patients I got lightheaded. Sat down, drank water, ate sugar cookie for about 10/15 minutes but symptoms persisted. Tried to keep working, but found myself just thinking about how I am going to pass out. No LOC. Evaluates by colleague. Received 2L of IVs (Cr wnl) with transient improvement in symptoms.	None	N/a
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906038-1	Pt noted tightness/swelling around eyes along with itching/burning sensation at same. Then developed itchy erythematous rash starting right shoulder (near where injection was done) and spreading to back. Benadryl 50mg IM given. Was sent to ER for continued monitoring; she did well without further treatment (other than 500mL of saline IV) and was released in good condition. She did not have lightheadedness, lip/tongue/throat swelling, SOB, GI symptoms, or hypotension.	COPD exacerbation in 1 month prior	Albuterol inhaler/nebs Aspirin Atorvastatin Wixela inhaled Flonase nasal spray loratadine Spiriva inhaled
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906041-1	Employee, 1st Pfizer COVID19 vaccine today. ~6min s/p shot, he felt a little itchy just @injection site, then got anxious & felt woozy, sweaty. Wearing big mask and a face shield, seemed anxious. Walked independently to go lay down. No syncope. BP up to 140/90, HR 90, RR 20, breathing fine, no itchy throat/swelling/hives. Improved w/ laying down. To ER out of an abundance of caution-- vitals nl., nl. exam, still itchy at shot site. Got 1L NS IV, 25mg PO Benadryl for itchiness- likely anxiety > severe allergy	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906045-1	30 minutes after receiving the vaccine, I (the patient) felt tingling in my lips, nose, and feet. I then developed a non-itchy, macular rash on my chest and back, associated with flushing. No fevers, chest pain, shortness of breath, nausea, vomiting, or diarrhea, I was taken to the emergency department, where I had normal vital signs. I was given Benadryl 25 mg PO with complete resolution of rash and tingling sensation within one hour.	none	birth control, methylphenidate
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906047-1	Urticaria to arms started on the eve of December 20, 2020, took benadryl and applied triamcinolone ointment to rash, woke up and found more rash all over the body took benadryl again, after an hour of taking the benadryl, my face started to itch, thats when I went to the ED where they gave me, a steroid IV , Benadryl IV and Pepcid IV.	none	ibuprofen biotin probiotic airborne immune support
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906056-1	"Patient notes that she received the COVID vaccine around 1800 today. After receiving the vaccine she notes she had developed a headache. She was otherwise doing fine until around 2000-2100 when she noticed her left arm become numb with paresthesias from her left bicep to her hand with whole arm localization. She felt her hands and wrists were puffy at this time and somewhat swollen. She reports feeling "floaty""Dizzy at this time, and at least once had to sit down due to this. She started feeling her heart race and some associated SOB, this has since resolved. She notes that she had two loose stools around this time as well. This progressed to develop into right numbness/paresthesias from her mid right forearm down to her hands. As the evening progressed she developed itchiness of her bilateral arms and torso. She notes that she has had a waxing/waning red/itchy rash on her arms that has been pruritic. She has since developed intermittent nausea, and still endorses feeling some "skipped beats." While in the ED from Triage to repeat evaluations her lips began having progressive swelling. She had been given Benadryl 50mg, Zofran 4mg, 1L IVF. Given ongoing tachycardia and lip swelling she was given Prednisone 40mg and Epinephrine for allergic reaction and concerns for anaphylaxis."	none	Tylenol, Albuterol, Airduo, Metformin, Trazodone
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906076-1	About 1-2 hours after receiving the vaccine, I began to have tongue Hb and throat swelling/mild to moderate. About 3-4 hours later, I had one episode of diarrhea, followed by chills and palpitations. I took Benadryl and Zantac around 8P. When I woke up in the morning, I still had tongue and throat swelling (no trouble breathing), so went to the ER and was treated for an allergic reaction with IV Benadryl, Solumedrol, and Pepcid.	Asthma, allergic rhinitis	Zyrtec, Birth control, multivitamin

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906116-1	light headedness; shortness of breath; headache; some nausea; get some redness to her neck and upper chest; Had elevated BPs; This is a spontaneous report from a contactable pharmacist. A 41-year-old female patient (non-pregnant) received first dose of bnt162b2 (Pfizer-BioNTech COVID-19 Vaccine, Batch/lot number: EH9899), intramuscularly on right arm on 15Dec2020 at 13:30 at single dose for immunization. The COVID-19 vaccine was administered in hospital. Medical history included arrhythmia - right bundle branch block, GERD (Gastroesophageal reflux disease), spinal headache, allergy to gabapentin, adhesive, duloxetine hydrochloride (CYMBALTA). The patient wears contact lenses. Prior to vaccination, the patient was not diagnosed with COVID-19. Concomitant medication within 2 weeks of vaccination included hydrocodone bitartrate, paracetamol (HYDROCODONE/ACETAMINOPHEN, 5-325 mg), omeprazole, meloxicam, docusate sodium, sennoside a+b (SENNA AND DOCUSATE SODIUM). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Within a few minutes of receiving the shot on 15Dec2020, the patient developed lightheadedness, shortness of breath, headache, and some nausea and was taken to the ED (emergency department). She did get some redness to her neck and upper chest, had elevated blood pressure. O2 saturation was fine. The patient received treatment for the events which included acetaminophen (TYLENOL), dexamethasone, diphenhydramine, famotidine, ketorolac, ondansetron, and 1 L normal saline in ED. The patient was prescribed adrenalalin autoinjector (EPIPEN) and prednisone and discharged home. Since the vaccination, the patient hadn't been tested for COVID-19. Outcome of reactions was resolved in Dec2020. Sender's Comments: Based on the close temporal relationship and the description of the events lightheadedness, shortness of breath, headache, nausea, erythema and high blood pressure, there is a reasonable possibility that the events are related to BNT162b2 vaccine. The case will be reassessed upon receipt of follow up information.	No current illness for this event.	HYDROCODONE/ACETAMINOPHEN; ; SENNA AND DOCUSATE SODIUM
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906123-1	waves of flushing through out her body; severe dry mouth; nausea; elevated heart rate into 120s; panic attack; This is a spontaneous report from a contactable consumer. A female patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in 2020 (at 0810 her time) at single dose for immunization. The patient's medical history and concomitant medications were not reported. The reporter is a Certified Nursing Assistant (CNA) who received the Covid 19 vaccine at 0810 her time. Five minutes after receiving the vaccine (2020) she reported having three episodes of the following symptoms: waves of flushing through out her body, severe dry mouth, nausea and elevated heart rate into 120s. She denied any shortness of breath, swelling or anaphylaxis. She was treated in the Emergency Room (ER) with fluids and lorazepam (ATIVAN) and sent home. She contacted her doctor who advised she was probably having a panic attack and was told her to take lorazepam. She reported sleeping when she got home but experienced the elevated heart rate and flushing again after waking. She spoke to her doctor a second time and was told to return to the ER to be treated for the elevated heart rate. She did not go to the ER because she took more lorazepam and the HR declined into the 90's. She stated her doctor was prescribing a beta blocker for her but advised to go to the ER if her heart rate goes over 100 again. She would like to report and Adverse Event. The outcome of the events was unknown. Information regarding lot/batch has been requested. Sender's Comments: Based on the information available as reported at this point, a possible contributory role of the suspect products cannot be excluded for the reported event flushing, dry mouth, heart rate increased, nausea and panic attack due to temporal association.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906126-1	Feeling of going to pass out; PVCs; PVCs; Shaking feeling internally from neck down to ankles; Sweating; palpitations; This is a spontaneous report from a contactable consumer (patient herself). A 60-year-old female patient received bnt162b2 (lot number: FK5730), via an unspecified route of administration at site of right arm at 10:15 on 17Dec2020 at single dose for immunisation. Medical history included Chronic migraine. Occasional PAC/PVCs. Concomitant medication included clonidine (strength: 0.02 mg). Within about 5 minutes of receiving the vaccine, the patient experienced shaking feeling internally from neck down to ankles, sweating, feeling of going to pass out. Some palpitations and PVCs. Shaking Symptoms lasted approx 4 hours. The patient visited emergency due to events. No treatment received for events. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The outcome of events was recovered on 17Dec2020.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906131-1	Headache; Dizziness; Nausea; This is a spontaneous report from a contactable other health professional. A 56-year-old female patient received bnt162b2 (BNT162B2) via intramuscular in right arm on 17Dec2020 at single dose for vaccination. There were no medical history or concomitant medications. The patient experienced headache, dizziness, nausea all on 17Dec2020. The reporter described that immediately after patient was administered the COVID-19 vaccine injection she was handed the paperwork, stood up and had sudden onset headache, dizziness and nausea. As of time of the report the headache had subsided slightly but came and went in waves. The dizziness and nausea remain persistent. She reported the seriousness criteria as probably medically significant or somewhere between not serious and medically significant. Patient was currently under observation in the ED (emergency department), but had not been admitted to the hospital. The patient had been in the ED for over 30 minutes at time of report, so patient did not believe that these events are vagal. The reporter called to report these events and to ask for recommendations on how to respond to these events relative to this product. The reporter verified that there had been no relevant testing, imaging, lab work or investigations done at this time. The outcome of the event headache was recovering while for all other events was not recovered. Information on the Lot/Batch Number has been requested.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, headache, dizziness and nausea, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906622-1	tingling to the tip of the tongue and further back to the middle of tongue, oral tingling (upper lip and then into the lower lip); mild swelling to the tip of the tongue; This is a spontaneous report from a contactable nurse. A 51-year-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot number: EH9899), intramuscularly in the left deltoid on 17Dec2020 11:15 at a single dose for COVID-19 immunization. Medical history included palpitations multiple premature ventricular contractions (PVC)s from 11Jan2020 to an unknown date. The patient's concomitant medications were not reported. Patient denied any history of previous adverse reactions to vaccines. The patient previously took dexamethasone (DECADRON) and experienced tingling of lips and tongue and sulfamethoxazole trimethoprim (BACTRIM) and experienced allergies and acute kidney injury. The patient experienced tingling to the tip of the tongue and further back to the middle of tongue, oral tingling (upper lip and then into the lower lip) and mild swelling to the tip of the tongue on 17Dec2020 11:15. During the 15-minute waiting period after the injection, the patient began to experience oral tingling (upper lip and then into the lower lip). It then progressed to the tongue and she reported tingling to the tip of the tongue and further back to the middle of tongue. She thought there might be some mild swelling to the tip of the tongue. She denied rash, hives, welts, difficulty breathing, difficulty swallowing, wheezing, throat tightness, hoarseness, stridor, itching, lightheadedness, dizziness, facial swelling and lip swelling. The patient went to the emergency room/department or urgent care. The patient received diphenhydramine hydrochloride (BENADRYL) as treatment for the events. The outcome of the events was recovered in Dec2020.	No current illness for this event.	No other medications for this event.

Shortly after that my upper lip started to swell. Over night my lip swelled more and my face became itchy.	no	corlanor prazosin potassium lexapro roboxin mag ox
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906629-1	Client started to feel faint about 10 minutes after she had the vaccine administered. She informed the nurse. Her blood pressure was 100/62 hr 58. She sat for a few minutes and then vomited. She had become very diaphoretic. Her bp was 146/100 and hr was 96. She was responsive and she refused a shot of Benadryl. We called for an ambulance. We continued to monitor her bp and hr. Her husband arrived. She left with her husband. Her last bp was 136/100 hr was 70 ab she was not longer diaphoretic. He husband took her to the ER. I spoke to patient today at (9:10 am. The ER doctor told her she had a vasovagal incident. He told her she can get the second dose if she is in a supine position with monitoring.	none	none

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906657-1	Tingling mouth; This is a spontaneous report from a contactable physician. A patient of unspecified age and gender received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), via an unspecified route of administration in Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced tingling mouth in Dec2020. The event happened during the observation period after the vaccine was administered. The reporter thinks that the patient just panicked and overreacted and doesn't think they had a reaction. The patient did go the emergency room (ER) and was discharged the same day. The outcome of tingling mouth was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906676-1	diaphoresis; rigors; chest pain; This is a spontaneous report from a contactable nurse. A 38-year-old female patient received first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine, lot number: e10140), via an unspecified route of administration at right arm on 18Dec2020 09:45 AM at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient has known allergies to flu vaccine. On 18Dec2020 at 10:15 AM, the patient experienced adverse events of diaphoresis, rigors, and slight chest pain. The adverse events resulted in emergency room/department or urgent care. It was unknown if treatment was received due to adverse events. The outcome of the events was unknown. The events were considered non-serious.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906684-1	sensation in throat/a menthol cough drop stuck in the throat; flushed; diaphoretic; burning into my chest; some random hives; This is a spontaneous report from a contactable consumer (patient herself). A 38-year-old female patient received first dose of bnt162b2 (lot number: EL0140), via an unspecified route of administration at site of left arm at 11:30 on 19Dec2020 at single dose for COVID-19 immunization. Medical history included Oral Allergy Syndrome, ADHD (attention deficit hyperactivity disorder), multiple food allergies, and allergies: PCN, Ceclor and Lovenox multiple. Concomitant medication included cetirizine hydrochloride (ZYRTEC), montelukast sodium (SINGULAIR), diphenhydramine hydrochloride (BENADRYL) and amfetamine aspartate, amfetamine sulfate, dexafmetamine saccharate, dexafmetamine sulfate (ADDERALL). Within minutes after vaccination, the patient became flushed and diaphoretic followed by a sensation in her throat, it felt that she had a menthol cough drop stuck in the throat and the burning into her chest. Once the medics administered IV Benadryl, the sensation in her throat went away. She was in the emergency room for about 3 hours and had some random hives throughout the rest of the evening. She had anaphylaxis previously to avocado and to an allergy shot. This was definitely nothing close to anaphylaxis. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The outcome of events was recovered in Dec2020.	No current illness for this event.	ZYRTEC [CETIRIZINE HYDROCHLORIDE]; SINGULAIR; BENADRYL; ADDERALL
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	906719-1	Patient recieved dose one of the Pfizer Covid 19 Vaccine. Within ten minutes scratchy throat started. Patient was monitored for 30 minutes and throat irritation became worse. Transferred to urgent care for follow up. Received a dose of diphenhydramine, symptoms lessened, and was able to leave urgent care for home.	Arthritis	Vitamin D

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	907010-1	Developed itching to lips and left arm 10 mins after injection. Benadryl 25mg oral given. Symptoms progressed to tongue and mouth itchiness. Pt transferred to ED for further eval and care. IV NS famotidine and methylprednisolone given. Discharged home.	none	Benadryl - Epi pen PRN
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	907011-1	1406, Monitored pt 1:1. She reported feeling fine for the first 15 minutes then reported itching involving her face but not forehead. Gave 25 mg IM diphenhydramine. pulse ox Reading was wnl. Within 5-10 min after diphenhydramine pt reported itching involving her arms, facial flushing but no shortness of breath. extra 25mg diphenhydramine IM given and Epinephrine IM administered. medical director notified. Dr. came and assessed and monitored patient. Symptoms resolved while on site. Pt escorted by medical colleagues to workplace ER where she agreed to stay for further monitoring. Dr followed up with pt later in the evening and she was doing. Patient updated progress December 20, 2020. I have had continued symptoms since Thursday though initially I felt that they were just typical post-reaction type symptoms. Thursday night I just had some itching and occasional hives. Friday I woke with a terrible headache and could not lift my left arm above my head due to pain but figured that these were vaccine effects. I had intermittent hives and itching that I was able to suppress by taking Allegra, Zyrtec and Claritin (each once) throughout the day. I was also taking Pepcid at night. Saturday, I tried to decrease my antihistamines to just Allegra BID, Pepcid once and Benadryl just last night. I woke with hives and worse itching again. I also appeared to have what looked like eczema on my hands that was new. So I took Pepcid and Allegra prior to going into my shift this morning. I took Zyrtec around 9 am as I had not yet had any improvement in my hives or itching. My co-attending noted that I was progressively becoming more flushed and around 11 am I started to experience an odd sensation in my throat with a persistent cough. My vitals were normal (HR 75, sat 98%, BP 113/78), so I talked the other attending out of more epinephrine and she prescribed me dexamethasone 16mg. I took the dex plus a Claritin at noon today and by 2 pm, had resolution of all of these symptoms. I also noted that my chest felt significantly less tight and retrospectively think I have been experiencing chest tightness and pressure since Friday but hadn't realized it because it occurred gradually. As of December 21, 2020, patient was to start prednisone 40 mg daily x 5 days.	Unknown	Unknown

Urticarial sx and lip tingling returned in 2 hours, pt transferred to ED for treatment with epinephrine, steroids, observation.	No	Novolog insulin, Lisinopri, Simvastatin
COVID19 (COVID19 (PFIZER- BIONTECH)) (1200)	No	None	Emergency Room *	907050-1	Chest pressure and headache followed by generalized itchiness and hives. Progressed to facial swelling and airway swelling. Treated with EpiPen x1 IM, 50 mg diphenhydramine PO, 20 mg famotidine, and 10 mg dexamethasone. Immediate reaction improved. Itchiness and intermittent hives continued. The headache continued along with other common/expected side effects of vaccine.	none	benadryl 50 mg
COVID19 (COVID19 (PFIZER- BIONTECH)) (1200)	No	None	Emergency Room *	907051-1	On 12/16 about 10pm I began having arm pains and took tylenol. 12/17 woke up feeling exhausted with severe body aches, headache and a 101 temp. I went to work but had to leave because I just wasn't feeling good. On 12/18 I went back to work but could not perform so I had to leave again and was still experiencing the severe body aches and headaches but no fever. I was suppose to work on both 12/19 and 12/20 but had to call in. On 12/19 still same symptoms with no fever but around 5pm I began to have palpitations and heart racing which caused me to go to the ER. I was given fluid and labs was done and monitored for a few hours and was released after the fluid was given. On 12/20 felt pretty good still tired and exhausted feeling and on 12/21 I felt good but later that evening I noticed my forearms began to feel stiff, tingly and heavy. My hands began to feel stiff and is very sore. Continue to feel very tired with body aches and continued to take tylenol. This morning I felt ok but after fixing breakfast the symptoms came back and they feel like the same symptoms I had when I had the vasculitis in 2009-2010 and that concerned me so I discussed it with a Neurologist and Immunologist who I will reach out to after the holidays to schedule an appointment. I have an appointment scheduled with my PCP for additional labs on tomorrow 12/23 and I have not been able to work since getting the vaccine. My hands feels clumsy and I am constantly dropping things since yesterday	No	Diabetes and Hypertension meds

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	907160-1	(I'm a physician who received the vaccine at my medical clinic). 5 minutes after receiving the vaccine, I felt very dizzy and faint. We checked my BP (which is usually 120/70; I do not have hypertension), and it was 190/120, HR 120-130 bpm. We rechecked it several times and it stayed there. After 5 minutes, I suddenly felt better and my BP had dropped to 140/70, HR 70. I felt exhausted. No other problems. They watched me for 30 minutes and I felt fine. I had my husband drive me home. As we were driving home (now one hour after the vaccine), I realized that my throat was closing up. I was breathing fine but I realized I was having an anaphylactic reaction from the vaccine. I have never had any allergic reactions before to vaccines, etc. He drove me back to the emergency room of my hospital, where they diagnosed me with an allergic reaction/anaphylaxis to the vaccine. They gave me emergently IV solumedrol (steroids), pepcid, and benadryl, which fortunately worked immediately. They observed me for several hours and I was fine. They sent me home. The next morning, I felt exhausted and my throat was hoarse and sore, but that went away several hours later. It was a terrifying, terrible experience. I thought I was going to die. I had to pay \$1000 out of pocket for the ER deductible.	none	Synthroid 0.125 mg daily, multivitamin daily

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	907177-1	developed swelling of tongue; dyspnea; skin rash; This is a spontaneous report from a non-contactable consumer. A 35-year-old male patient received BNT162B2, via an unspecified route of administration on an unspecified date in 2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. This is a call from CDC this morning regarding a new case, the patient was administered vaccine and developed swelling of tongue, dyspnea, skin rash on an unspecified date in 2020, then treated with dexamethasone, diphenhydramine hydrochloride (BENADRYL), via intramuscular (IM) epinephrine in emergency room (ER). The outcome of events was unknown. She will alert him each time there is a report of severe hypersensitivity for his awareness. Further, the CDC is in the process of appointing a contact who will be able to meet with us regularly on this topic. Their conversation was amicable and demonstrated a willingness to work closely with us as we navigate the issue of hypersensitivity. No follow-up attempts are possible; information about lot/batch number cannot be obtained.; Sender's Comments: The reported information is limited. Based on the temporal relationship and the description of the events, swelling of tongue, dyspnea, skin rash, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	907180-1	itchy throat; itchy throat/back of the tongue reaction; This is a spontaneous report from a contactable physician. This physician reported similar events for two patients. This is the first report. A female patient of an unspecified age (reported as 50, unit unknown) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date were not provided), via an unspecified route of administration on 17Dec2020 22:00 at a single dose for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient experienced itchy throat/back of the tongue reaction. No rash, then they gave her epi 10, ED (emergency department) doctor assessed for 2 hours. No evidence of tongue swelling, hemodynamics was normal. Outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on the close temporal relationship and the description of the events, itchy throat/ tongue reaction there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate..Linked Report(s) : US-PFIZER INC-2020500303 Same reporter, product, and event, different patient	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	907182-1	Patient developed bilateral lower extremity numbness and tingling, as well as weakness that resolved after several hours of observation in the Emergency Department. It is highly likely that the response may have been in part related to anxiety. After several hours of observation the patient had return of motor strength and was able to discharge. She continued to have paresthesia that was improving at time of discharge.	None	Caffeine
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	907184-1	Swollen hands; dizzy; This is a spontaneous report from a contactable nurse. A 38-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EK5730), intramuscularly in the left arm, on 17Dec2020 at 14:00 (at the age of 38-years-old) at a single dose for COVID-19 immunization. Medical history included non-ongoing COVID-19 (previous well recovered from COVID-19 months earlier) from 2020 to an unspecified date. The patient was not pregnant at the time of vaccination. The patient's concomitant medications were not reported. It was unknown whether the patient received other vaccines within four weeks prior to vaccination or other medications within two weeks of vaccination. The patient experienced swollen hands and dizzy on 17Dec2020 at 15:00. The events resulted in emergency room/department or urgent care visit. Therapeutic measures were taken as a result of the events, which included cetirizine hydrochloride (MANUFACTURER UNKNOWN) and monitoring. The clinical outcome of swollen hands and dizzy was recovering. It was also reported that since the vaccination, the patient had not been tested for COVID-19. No follow-up attempts are possible; information about lot/batch number cannot be obtained.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	907185-1	40 minutes later, I became flushed, hot, sweaty and clammy and tachycardic along with a syncope episode. Nausea came after, and only treatment was fluids. This episode happened after discharge around 9:45pm and then returned to the hospital for the same course of action.	N/a	N/a

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	907197-1	my eyes were painful; my eyes were itchy; Eyes swelling; my face were swelling; A little short of breath; Hands are still swollen, my arms are slightly swollen and so is my eyes; Dry rash on hand almost looks like dry eczema rash or psoriasis like it looks like it's a dry patchy rash; Severe headache almost like a migraine; I started to feel little bit, a little off; This is a spontaneous report from a contactable nurse, the patient. A 49-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EJ1685), intramuscular in the left arm on 16Dec2020 (at the age of 49-years-old) as a single dose for COVID-19 immunization. Medical history included hypertension and hot flashes. Concomitant medications included clonidine (MANUFACTURER UNKNOWN) taken for hot flashes, fish oil (MANUFACTURER UNKNOWN) for an unknown indication, omeprazole (MANUFACTURER UNKNOWN) for an unknown indication, spironolactone (MANUFACTURER UNKNOWN) as a diuretic, and multivitamin (MANUFACTURER UNKNOWN) for an unknown indication; all from unknown dates and unknown if ongoing. On 16Dec2020, the patient experienced eyes were painful and itchy, eyes and face were swelling, a little short of breath, hands swollen, arms slightly swollen, dry rash on hand almost looks like dry eczema rash or psoriasis like it was a dry patchy rash, severe headache almost like a migraine, and felt a little bit off. The clinical course was as follows: the patient received the vaccine on 16Dec2020 and waited 15 minutes and did not have any reaction. She went back to work. As she proceeded to work her shift, she started to feel little bit, a little off. She couldn't really describe it but thought it may have been psychological because she was just really watching heavily for any type of symptoms. She had worked an hour over her shift and it usually took her about 40 minutes to get home. When she got home around 21:00, her eyes were painful and itchy and when she looked in the mirror her eyes and face were swelling. Then, she became a little short of breath not to a point where she thought she needed oxygen, just a little short of breath. She called the hospital where she worked and talked to the manager and then they advised her to go the emergency room. At the emergency room, she received intravenous fluid, diphenhydramine hydrochloride (BENADRYL), famotidine (PEPCID), and dexamethasone (DECADRON) for treatment. She also took cetirizine (ZYRTEC), prednisone (MANUFACTURER UNKNOWN) and triamcinolone cream for the dry patchy rash. The patient stated that she had lab work done earlier in Dec2020 (before the vaccination) and everything was normal. The clinical outcomes of the itchy eyes, eye swelling, hands swelling, and arms slightly swollen were not recovered and ongoing; while that of the little short of breath, dry patchy rash, headache, and feeling a little off, were unknown. The outcome of the eye pain was recovered on an unknown date in Dec2020; while that of the face swelling was recovering.; Sender's Comments: Based on the close temporal relationship and the description of the events, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate	No current illness for this event.	;;;

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	907205-1	"Tingling throat; This is a spontaneous report from a contactable physician. This physician reported the same event for two patients. This is the first of two reports. A patient of unspecified age and gender received the first dose of the bnt162b2 (BNT162B2; also reported as COVID-19 vaccine; unknown lot number, NDC number and expiration date), via an unspecified route of administration on an unspecified date at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. It was also reported that it was unknown if other products were received or if an investigation assessment was performed. On 16Dec2020, the patient experienced: tingling throat (non-serious). The physician called regarding the COVID-19 vaccine since they had two events that happened on 16Dec2020; however, the physician stated she needed to ask a question before speaking with Pfizer's Drug Safety Unit (DSU) and reporting the events. The physician stated that two patients reported tingling in their throats during the observation period after the vaccine was administered. The physician thought ""they just panicked and overreacted "" and she did not think they had a reaction. The patients did go the ER (emergency room) and were discharged the same day. The physician wanted to be able to give the second dose. The physician wanted to ask about the side effects of the vaccine. The outcome of the event was unknown. The batch/lot numbers for the vaccine, BNT162B2, were not provided and will be requested during follow up. ; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020504906 same reporter/drug/event, different patient"	No current illness for this event. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	907241-1	I didnt notice but evidently my eyes changed because the CNO looked at me and asked if I was ok. Im not sure of what they looked like to make her cue in on I wasnt feeling well but she came over and began to monitor me at that time. I felt light and fluffy and when I got up to get juice I felt like I was dissociated from my body, my movements were awkward, I was severely weak and was not steady on my feet. I felt as if my mind was moving but my body couldnt keep up. I was very laggy and felt as if I was intoxicated. The head of the ER made me drink alot of cold water about 24oz of water and 4 oz of juice which then caused me to get super cold and shivery. Vitals were stable the whole time but my BP shot up to 170/90 a few moments after the water. I was transferred to a monitoring room where I was covered with alot of blankets and allowed to lay down until I warmed up until my BP lowered and I was released. My arm didnt begin to hurt until about 6-8 hours after and I have a red mark and the top layer of skin just do not want to heal. I am still today having to put bandages on the spot because its red and the skin on top keeps coming off. I had joint pain and aches into the next day after causing me to take an Aleve gelcap for the pain. Nausea here and there also.	no	Centroid, BioIdentical Hormones, B Vitamin, Multivitamin and multiple herbs and supplements. Will provide accurate list if needed

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	907513-1	"Patient pre-medicated with diphenhydramine, albuterol, Claritin, and singular. After roughly 10 minutes after administration the patient reported tingling in her lips and ""felt like she needed to use her inhaler"". Our administration station is in our front lobby, when the patient reported her side effect she was taken to the Emergency department for observation. The patient was hooked up to the monitor and a set of vitals were taken. On arrival she was tachy in the 100's with a BP of 140-90. On the repeat vitals in 15 minutes she was within normal limits. The patient was treated with Diphenhydramine 12.5 mg PO and Albuterol 2 puffs via spacer. The patient was observed for ~3 hours, the patient had mild angioedema and a numb tongue/lips. After resolution symptoms the patient was discharged from ED."	n/a	Singular, Albuterol, Loratadine
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	907520-1	Next to my head feel really hot, nauseous, dizziness, high blood pressure, shaking feel Hot and cold	No current illness for this event.	Pronaparol, hydrochlorothiazide . Ambien, butabitol,
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	907524-1	Reports had joint pain & shoulder pain, shortness of breath, pale-instructed to go to ED for medical treatment.	Unknown	Unknown
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	907526-1	Per Vaccine recipient approximately 4-4 1/2 hours after receiving vaccine she noticed facial swelling in and around nose, to neck area, to R elbow and a petechial rash near R elbow. She immediately took Benadryl and Pepcid and then went to ER for further evaluation, where she was given a dose of Zyrtec and 5 day course of Prednisone. She left ER with no further complication.	No	takes bendaryl, Loratadine, & rescue inhaler PRN
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	907582-1	I received the vaccine at 1:40 PM in my left arm. They had me wait 15 minutes for observation. 15 minutes later, I left feeling fine. I went back to work. Around 2:15 I started getting chills. I ignored it thinking that I was psyching myself into it thinking about the shot. But then the nausea began. I was at work and started feeling horrible. I started cramping in my stomach. I was alone at work, and then I started throwing up. It started at 3:40. I left work at 4:30 with the most body wracking chills and went to the emergency room. I was violently heaving at this point and they rushed me into a room where I received an IV drip of fluids and anti nausea medication. It wasn't until after the medication was administered that I felt better. I would say this was around 5 pm. They sent me home with an anti nausea medication. I was released to go home around 730-8 PM. I felt so much better after the medication was administered.	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	907584-1	"Patient reported a metallic taste on vaccine administration, after ~ 10 mins reported a tongue tingling. The patient was escorted to the emergency department for observation. Patient was slightly hypertensive 140's/90's which is not normal for her. Some of this could be attributed from the ""white coat effect"". The patient had no visible angioedema, just a mild rash on her trunk/upper torso/chest. The patient was treated with 50mg PO diphenhydramine and 40mg of Famotidine. The patient's symptoms resolved within 30 minutes of medications administered. Patient was discharged after ~ 2 hours in the ED."	N/A	Yasmin, Ondansetron

COVID19 (COVID19 (PFIZER- BIONTECH)) (1200)	No	None	Emergency Room *	907705-1	Within 2 minutes of injection, I became tachycardic; shaky; a bit dizzy; This is a spontaneous report from a contactable consumer (patient). A 49-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL0140), via an unspecified route of administration on 18Dec2020 07:15 AM at right arm, at SINGLE DOSE for covid-19 immunization. Medical history included anxiety and depression, allergies to IV dye, Bee stings. Concomitant medication included famotidine (PEPCID), diphenhydramine hydrochloride (BENADRYL), ergocalciferol (VIT D), acetylsalicylic acid (BABY ASPIRIN). The patient previously took levofloxacin (LEVAQUIN) and experienced allergy, ceftriaxone sodium (ROCEPHIN) and experienced allergy. The patient was not pregnant at the time of vaccination. Within 2 minutes of injection, the patient became tachycardic, shaky and a bit dizzy from 18Dec2020 07:15AM. These events resulted in Emergency room/department. No treatment was received for these events. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The action taken in response to the events for bnt162b2 was not applicable. The outcome of the events was recovered in Dec2020. No seriousness criteria: no Results in death, no Life threatening, no Caused/prolonged hospitalization, no Disabling/incapacitating, no Congenital anomaly/birth defect.	No current illness for this event.	PEPCID [FAMOTIDINE]; BENADRYL; VIT D; BABY ASPIRIN

Did not immediately notify monitoring staff thinking she was anxious, by 10 minutes after started to experience some coughs and felt voice changed, Epinephrine administered via EpiPen at 13 minutes post vaccination with immediate relief. No visible hives or swelling.	None	Zoloft 150mg Wellbutrin XR 150m Abilify 2mg Vitamin D 5000u Allegra 180 mg (two tablets) OTC. Omeprazole 40mg Topimate 100mg
COVID19 (COVID19 (PFIZER- BIONTECH)) (1200)	No	None	Emergency Room *	907766-1	Starting the evening of the 5th day after receiving the vaccine I noticed a sore, irritated throat. By the 7th day it was a more severe sore throat, runny nose, violent sneezes and the beginning of a deep painful cough. No fevers have been noted to date, with the highest oral temperature of 98.6f on the 7th day. I called the employee hotline, had a virtual visit with a Dr and took the drive up COVID test around 11:00 am on 12/23/20. I am in self quarantine currently awaiting results of the COVID test.	none	xyzal, vitamin D3
COVID19 (COVID19 (PFIZER- BIONTECH)) (1200)	No	None	Emergency Room *	907771-1	After 15 min patient had tingling in her left arm all the way down to her hand, then started to travel to left side of face. 5 min later tingling started to travel to her left leg. Pulse ox- 96% HR 57. 1251- ED lead RN was then contacted to evaluate patient in the ED.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER- BIONTECH)) (1200)	No	None	Emergency Room *	907801-1	Vaccine recipient developed mild nausea, acid reflux, and stomach pain 10 minutes after vaccine administration. Vaccine recipient then developed nasal congestion and cough at 19 minutes, and then shortness of breath at 21 minutes. The vaccine recipient was then sent to the emergency department. While in the emergency department it was determined that the vaccine recipient had an allergic reaction. When vaccine recipient had shortness of breath the oxygen saturation went to 89-90%. The vaccine recipient received albuterol, diphenhydramine, famotidine, methylprednisolone, and fluids. During re-examination, the vaccine recipient's condition improved and stable. Vitals were within normal limits. 89-90. They were discharged to home. At follow-up phone call on 12/23/2020, the vaccine recipient reported that they felt much better but was still experiencing voice hoarseness.	None	Spironolactone, Lexapro, Xyzal
COVID19 (COVID19 (PFIZER- BIONTECH)) (1200)	No	None	Emergency Room *	907802-1	15 minutes after getting the vaccine, she developed a pruritic rash over her neck, chest, and precordium. Also became tachycardic up to 130-140 (may be attributed to anxiety of having a rapid response called). She reported feeling a lump in her throat but no facial swelling or angioedema, no lymphadenopathy. Was treated with diphenhydramine 50 mg IV, famotidine 20 mg IV, and methylprednisolone 125 mg IV. After 1 hour of observation and ongoing feeling of lump in her throat with new mouth tingling, was also given 0.15 mg epi IM. Was observed with resolution over 8 hours, and discharged to home with instructions to continue treatment with oral prednisone, famotidine, and cetirizine over the subsequent few days.	none	Diltiazem 30 mg once daily
COVID19 (COVID19 (PFIZER- BIONTECH)) (1200)	No	None	Emergency Room *	907806-1	Patient presented for COVID-19 vaccine (Pfizer-Sars-CoV2-vac), pt received the vaccine and then 15 minutes later started feeling some lumpiness in her throat, watery eyes, and ear fullness. Pt denied feeling any itchiness, difficulty breathing, lip swelling, or throat swelling. Pt received two doses of oral diphenhydramine 25 mg each without improvement in symptoms. Patient was observed for 1 hour and 20 minutes. After consulting with Dr., it was recommended to have the patient go to the emergency room for more observation. The patient was then escorted to the ER by one of the volunteering staff. In ED, reported throat tightness without SOB or difficulty swallowing. Also reports feeling sense of ingestion/gas bubble in chest. Had COVID, dx'd 12/1/20, recovered fully. States that sensation in chest was also felt during her COVID illness and seemed to be brought back by vaccine this afternoon approximately 90min pta. Observation for additional 90min in ED, with possible mild improvement, no progression/worsening. Discharged home	Had COVID, dx'd 12/1/20, recovered fully	cetirizine for seasonal hayfever

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	908227-1	The patient is a 57 year old female who presents to the ED with an allergic reaction. Patient received her COVID vaccine this morning at a vaccine POD at 0708, 5 minutes after receiving the injection she began to feel short of breath, with dry cough and felt tightness in her throat. Patient used her inhaler at that time and then her symptoms improved. Of note patient also took a Benadryl prior to receiving the vaccine because she has a history of allergies (reports allergy to codiene). She was evaluated by people at Covid vaccine site and cleared. She went to work at the clinic where she works as a tech but continued to have tightness in her throat, so a doctor at the facility told her to take another Benadryl. Patient states that an hour after taking the second dose of Benadryl she began to feel drowsy and nauseous. She had a sip of coffee and try to eat something but then became tremulous and vomited. She was given epinephrine at work and transferred here for further work-up and management. On arrival patient reports that she feels back to baseline. She denies at any time having any rash, pruritus, or angioedema.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	908263-1	"started to feel a warmth in her chest and abdomen; She felt like her heart was racing; Developed chest pain; This is a spontaneous report from a contactable other HCP (healthcare professional). A 45-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot #: EJ1685), intramuscularly in the left arm on 18Dec2020 at 15:30 (at the age of 45-years-old) as a single dose for COVID-19 vaccination. Medical history included known allergies to apple, cantaloupe, peach, avocado and IV contrast dye; all from unspecified dates. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. Concomitant medications included ongoing famotidine and salbutamol (ALBUTEROL HFA) as needed (PRN); both for unknown indications from unknown dates. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient previously received hydromorphone (DILAUIDID) and triamcinolone acetonide (KENALOG); both from unknown dates to unknown dates for unknown indications and experienced allergy. The patient also previously received diphtheria vaccine toxoid/pertussis vaccine acellular/tetanus vaccine toxoid (Tdap) vaccine on an unknown date for immunization and experienced allergy. On 18Dec2020 at 15:45, the patient started to feel a warmth in her chest and abdomen, she felt like her heart was racing, and developed chest pain. It was reported that ""patient started to feel a warmth in her chest and abdomen. She felt like her heart was racing. Developed chest pain. No shortness of breath or difficulty swallowing"". It was unknown whether the patient received any treatment for the events. It was reported that the adverse events resulted in emergency room/department or urgent care visit. It was also reported that the events were non-serious and did not cause or prolong hospitalization. The clinical outcomes of the events started to feel a warmth in her chest and abdomen, she felt like her heart was racing and developed chest pain were all unknown. It was unknown whether the patient had been tested for COVID-19 since the vaccination."	No current illness for this event.	; ALBUTEROL HFA

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	908648-1	feel flushed, warm all over, itchy, and an urticarial rash appeared on her upper chest and arms.. given diphenhydramine 50mg IM x1, methylprednisolone 125mg, famotidine 20mg, felt better and all symptoms improved except for pruritis by 1715 on 12/23. discharged home from emergency room	No current illness for this event.	rosuvastatin 20mg daily
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	908653-1	I received the injection at 08:15 am after hung around upon me getting ready to go elevated heart rate and pulse started to race. Then I stayed there lips started to tingle after 10 mins heart rate came down. I went back to work 1 1/2 hrs tongue was still numb and tingling. I went back to facility where I first received my vaccine. I was told to go to the ED checked blood pressure and I was offered Benadryl I declined. I dint miss any days of work.	No	No
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	908654-1	About 10 minutes after receiving vaccine, patient reported feeling hot and not well. Patient had not eaten breakfast prior to appointment. Patient's oxygen sat was 100% but heart rate initially 42 (normal range 55-65) and blood pressure 90/60 (normal for him). Patient was diaphoretic and was given crackers and juice. Patient's symptoms continue to progress with heart rate down as low as 34. Due to progression of symptoms, patient was taken to the ER.	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	908666-1	Patient states she was receiving her COVID vaccination today, 12/23/20, in the left arm. About 5 minutes after the vaccine was administered, patient felt left arm pain that radiated into the left shoulder. About 10 minutes after the arm/shoulder pain began, she had left anterior chest tightness. She had her blood pressure taken, which was 109/104. She states the 104 diastolic is high for her.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	908672-1	I had severe abdominal pain that changed at a day and a half to mild abdominal pain.	No	No
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	908687-1	Patient became hot, nauseous, and blotchy five minutes after vaccine administered (09430). Clinic nurses and a physician in the clinic area responded immediately: history, comfort, pulse, BP comfortable/safe position in chair. Approximately 8-9 minutes later (0938-9), patient asked that her personally-owned Epiaphrine Auto-Injector (EpiPen) be administered, as she was unable to do so. Her symptoms were worsening and she had developed a lump in her throat. At 0940 a clinic nurse (RN) administered the EpiPen in the patient's right anterolateral thigh. Symptoms improved. 911 was called. Paramedics arrived quickly, and transported patient to Hospital Emergency Department, less than one minute away.	Unknown	Unknown

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	909084-1	I received my shot at 1347 and within 5-10 minutes after receiving the shot I got a hot flush feeling through my body. My heart then began to race and I became dizzy. I started to get a tickle feeling in my throat. Soon after my lips and tongue felt numb. My tongue had the feeling of having been burned by hot soup. I also had red splotches over my entire body (not a rash but redness). When I alerted the vaccination staff that I thought I was having a reaction they all seemed shocked. They didn't really know what to do and asked me what I wanted to do. I, myself, was having a hard time making choices since I was in a bit of a panic. They wanted to give me oral Benadryl but since I was having the reaction in my throat and mouth one of the nurses suggested IM Benadryl. They gave me that shot around 1405. They watched me for about an hour and I still had the numbness in my lips and tongue and the red splotches over my entire body. (During this entire time no one took my BP or pulse). I had 2 work friends (RNs) come to check on me. It was only then that one of them took my pulse. I was still had tachycardia. Since my symptoms were not fully resolving they sent me to the ER where I got solunedrol and Pepcid. They sent me home still having slight numbness in my lips and tongue. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	909157-1	Tingling og tongue and itchy eyes at 10min post admin Swelling/redness and flushing of head 20mins post admin Shortness of breath at 20mins Whole body hives and itching at 40min post admin Swelling under the jaw and tightness/burning in chest at 40min After treatment in er...symptoms resolved after 5hrs. 14hrs later, symptoms reoccurred, with increasing severity. Went back to the ER for treatment. Again symptoms resolved after 5hrs. Now on 25mg benadryl 4x/day, 40mg prednisone 1x/day, zertec 20mg 1x/day and 20mg famotidine 1x/day for the next 4 days. Still being treated.	No current illness for this event.	Zertec Pramiprexole Modafinil Aspirin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	909173-1	Immediately after receiving the vaccine tongue felt fuzzy/a little swollen. Also lightheaded, dizzy, eyes not focusing very well. After 10-15 minutes, eyes focusing better but still lightheaded. ~1 hour later noted swelling of uvula, posterior palatal arches, tongue, neck, face, lips, intermittent wheezing. In addition the next day headache and rash started. Now day 9 with continued intermittent severe swelling, wheezing, rash and headache and some level of oral and facial swelling every day as noted above. Musc aches started on day 8. Consulted with angioedema specialist; he felt was allergic reaction due to onset of symptoms. Had telemedicine visit with NP on 12/23/20. Had to go to Emergency Department on 12/25/20 for severe uvula, posterior palatal arch, face, lip, neck swelling unresponsive to oral Benadryl and oral steroids.	Angioedema, Lichen Planus/oral, Depression, GERD, Restless Leg/PLMD, Migraines, Asthma, Kidney stones, TMJ, Essential tremor	Pantoprazole, Propranolol ER, Cimetidine, Xyzal, Breo, nortriptyline, Lunesta, Oxycodone, Xolair injection; PRN Meds: Hydroxyzine, Benadryl, Flexeril, Nurtec, Ubrelvy, Zoran ODT, Ventolin inhaler, Epinephrine EpiPen
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	909180-1	C8 distribution numbness directly after inject. 4th and 5th digits of hand on injection side felt like tight rubber bands at base of digits, improved with benadryl and dexamethasone). C8 sx followed by 35 min later abrupt onset central facial numbness (felt as if I had received dental block, and lip swelling Mild but noticeable (upper lip more than lower). per ED attending also some blotchy red areas, not hives on the neck same side as injection. No shortness of breath or swallowing difficulties. Bp higher than base line and slightly tachycardia compared to baseline. Treated with benadryl and dexamethasone . Facial symptoms lasted over night took additional 10 mg of prednisone, with improvement over the course of the day.	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	909193-1	Within 10 minutes lips were tingling and small hives on roof of mouth (1635). After 30 minute evaluation I left since I thought it might be anxiety or Placebo. Took 2 Benadryl. At 1830 decided I needed to go to the ER since symptoms were worsening. Tongue swelling, hives on roof of mouth getting larger in size and increasing surface area, larger hives on inside of mouth, lips noticeably swelling to those who didn't know me, lips tingling, face itchy and discolored, getting harder to breathe to the point of being painful to swallow and talk. In the ER they have me a epinephrine shot in my left thigh and a intravenous dose of steroids in right arm. Observed for roughly 2-2.5 hours then sent home. Have a Rx for prednisone (3 20mg tablets for next 5 days) and instructions to contact allergist/ immunologist within 10 days. To date (12/25) symptoms are: still swollen lips although not as large, itchy face/ neck, sores on inside of mouth, throat still sore but can safely talk and eat without problems.	No	Prenatal vitamin, Zyrtec, Claritin, Famotidine, Montelukast, trazadone
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	909202-1	"WITHIN 5-10 MINUTES OF GETTING THE VACCINE. I STARTED FEELING LIGHTHEADED WHILE SITTING ON A CHAIR. I FELT LIKE I NEEDED TO LIE DOWN AND PUT MY FEET UP BECAUSE I FELT LIKE MY BP IS GOING UP. I TOLD SOMEBODY AND A NURSE CAME WITH A CRASH CART. I TOLD THE NURSE IF SHE COULD CHECK MY BP BECAUSE I COULD FEEL IT GETTING HIGH (I CAN TELL IF MY BP IS HIGH BECAUSE I TAKE BP MEDS FOR MY HTN.) I TRIED TO TAKE A DEP BREATH TO CALM MYSELF. NEXT THING I KNEW, A NASAL CANNULA WAS PLACED ON MY NARES. I FELT TACHYCARDIC, AND STARTED TO FEEL PALPITATIONS CREEPING UP MY NECK AND CHEST. THEY DID AN EKG AND PS BLOOD SUGAR ON ME. I HEARD SOMEBODY SAID, 'HER BP IS 200!'",. THE DOCTORS AND NURSES WERE STARING AT ME TO ASSES ME FOR ANAPHYLACTIC REACTIONS. I SAID ""I DONT THINK IT'S ANAPHYLACTIC REACTIONS"". A DOCTOR TOLD ME THAT THEY ARE BRINGING ME TO THE ED FOR FURTHER OBSERVATION. ON THE SECOND DAY POST-VACCINATION, I FELT SO TIRED, FEVERISH AND IT'S LIKE I HAD A HANGOVER."	none	Triamterene-HCTZ 37.5-25 mg

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	909803-1	12:30 pm injection given to left arm, after 10 minutes of waiting a sudden warm sensation began from left arm traveling across chest to right arm, up my neck and inside throat to my face and head. I found this sensation to be strange and describe the feeling similar to receiving contrast for CT scan and when administered you can feel the warm sensation as it travels through out your body. My vision became a bit blurry I tried to remain calm and asked others in the room if they experience similar symptoms in which no one had. I stood up and walked across the room to get some water. I had an unsettling feeling and coached myself to remain calm. I drank 2 cups of cold water and sat down. After about 5 minutes the hot flush went away. I decided to stay longer than the 15 minute observation time that I was told to do. After 30 minutes from injection I felt okay to leave.	Seasonal Allergies	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	909807-1	Within 30 minutes of vaccination, there was tongue numbness and tingling in addition to chest tightness. After 5 hours there was also upper lip numbness and tingling. Benadryl 50mg po was given in Emergency department of Hospital (where patient is a resident physician) and patient took another 25mg po Benadryl before bedtime. Tongue numbness improved by next morning, however upper lip numbness persisted. There was also upper lip swelling the next morning after vaccine, which was noticed when patient woke up (~16 hours after vaccination). This was treated with 20 mg cetirizine in AM and 10mg cetirizine at night by patient. Swelling persisted into the following day ~ 48 hours post vaccination before resolving. Patient's initial chest tightness resolved within the few hours of observation in ED.	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	909820-1	Vaccinated on 12/23/2020 at 1 PM. Moderate pain and tenderness on injection site. One white pustule on left tonsil. Tender lymph nodes. Moderate generalized body aches. Mild headache, mild fever. Went to urgent care Negative for mono and strep. Got script for erythromycin if symptoms persist. By 12/27/2020, I began experiencing dizziness and feeling ?swimmy headed? with no periods of relief (even when sitting still or laying down).	No current illness for this event.	Metoprolol succinate 75 mg Trokendi 50 mg Sprintec Claritin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910237-1	23 y.o. male who arrived by to the emergency department for suspected allergic reaction. Patient received his Covid vaccine 3 hours prior to ED arrival. Initially he was asymptomatic however, as the morning progressed, he developed a redness around the injection site. He then noticed a rash all over his face, that was mildly itchy in nature and felt warm. He denies any associated wheezing, shortness of breath, facial swelling, throat swelling, severe abdominal pain, vomiting, lightheadedness, dizziness, or syncope. He has not taken anything for his symptoms, and they continue to worsen. He has no prior history of allergic reaction to vaccines or other known allergies in the past. He states this is mildly itchy in nature. Patient was given 50 mg of p.o. Benadryl and Pepcid for symptomatic control. He was observed in the ED for 2 hours without any progression of his symptoms, no associated facial swelling, wheezing, shortness of breath, abdominal pain, vomiting, or hypotension to suggest anaphylactic reaction. He was discharged home in stable condition	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910239-1	The entire reaction was over in an hour started at 115pm 12/19/2020 I had pain in upper back and shoulder, within 5 mins it started hurting my left arm and traveled down to my wrist and then went into my left thigh and I had this sharp headache for 3 mins and then it all went away and I have not had any symptoms since. That day I went to the ER and they kept me for 2 hours for observation and I went back to my work, The only reason I sought care was because I was already in a hospital, I was taken by wheelchair, blood pressure was fine	none	omeprazole, doxycycline, oxybutynin, Cingular, Advair, aspirin, vitamin b12, vitamin D, Simvastatin, phenytoin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910250-1	"26 y.o. female who arrived presented to the emergency department for concern of an allergic reaction. Patient reports being at the COVID-19 clinic just prior to arrival receiving her first dose of the vaccine. However, after walking a few minutes later she began to experience an abnormal sensation in the back of her throat, describing it as "spicy" accompanied by a general wave of feeling ""hot and heavy"" with some tingling in her fingers and toes. Patient currently states that overall her symptoms are improving with only a continued feeling of ""hot and heaviness."" Denies a history of allergic reactions to vaccinations or medications, besides a possible allergic reaction to Penicillin when she was younger. Denies shortness of breath, nausea, emesis, or any other complaints at this time. Denies a history of GERD, stating that she has not eaten anything today. Patient is otherwise healthy with no use of daily medications. Patient was observed for one hour while here in the ED with no residual symptoms. Patient feels comfortable going home and will return for worsening symptoms. Agrees to follow up with her PCP. Vital signs are stable at time of discharge."	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910299-1	experienced a strong medicine-like smell; a rush of warmth throughout my body; felt that my hands were swelling and slightly itchy but they did not appear to be swollen; felt that my hands were swelling and slightly itchy but they did not appear to be swollen; panicked; felt that my throat was tight but I didn't feel short of breath; My BP was elevated at 140s/80s; tachycardic; This is a spontaneous report from a contactable nurse (patient). A 42-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: EH9899), intramuscularly at the right arm on 18Dec2020 at 13:00 (1 pm) at single dose for COVID-19 immunization. The patient was not diagnosed with COVID-19 prior to vaccination and since the vaccination, the patient has not been tested for COVID-19. The patient was not pregnant at the time of vaccination. The patient's medical history included asthma r/t environmental allergies, anxiety, and known allergies to PCN, Sulfa, grass, trees, ragweed, weeds, mold, dust mites, cat and dog. Concomitant medication included cetirizine hydrochloride (ZYRTEC), venlafaxine hydrochloride (VENLAFAXINE XR), colecalciferol (VITAMIN D), ibuprofen, and montelukast sodium (SINGULAIR). The patient received the vaccine on 18Dec2020 at approximately 1 pm (13:00) and 5 minutes later (18Dec2020 at 13:05), she experienced a strong medicine-like smell and a rush of warmth throughout her body. She then felt that her hands were swelling and slightly itchy but they did not appear to be swollen. She was panicked and felt that her throat was tight but she didn't feel short of breath. Her BP was elevated at 140s/80s and she was tachycardic. She gave herself an epinephrine injection and about 10 minutes later the occupational health nurse gave her 25 mg Benadryl at her request. The adverse events results in Emergency room/department or urgent care. The clinical outcome of the events was recovered on an unspecified date.; Sender's Comments: Based on the close temporal relationship, the association between the reported events with BNT162b2 can not be fully excluded. The history of asthma, allergies, and anxiety may have been contributory. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	ZYRTEC [CETIRIZINE HYDROCHLORIDE]; VENLAFAXINE XR; VITAMIN D [COLECALCIFEROL]; ; SINGULAIR
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910302-1	diagnosed with Bell's palsy; This is a spontaneous report from a contactable nurse (patient). A 33-year-old female patient received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE. Lot number: EK5730, expiration date: Mar2021), via an unspecified route of administration in left arm on 19Dec2020 10:00 at single dose for COVID-19 immunization. No other vaccine administered in four weeks. Medical history included drug sulfa allergy. Concomitant medication included cetirizine, cetirizine hydrochloride (ZYRTEC) from 18Dec2020, and multivitamin from 18Dec2020. No Covid prior vaccination. No Covid tested post vaccination. About 40 min after the vaccine (19Dec2020 10:40) the patient developed left facial/ left tongue tingling/ numbness. By 20:30 at night (19Dec2020 20:30), the patient had a left sided facial droop as well, the patient was diagnosed with Bell's palsy. 20:30 (19Dec2020), she had facial asymmetry. She looked in the mirror and noticed her smile was not symmetrical. She then checked into the Emergency Room and the ER doctors diagnosed her with Bell's palsy. She was not admitted to the hospital. Steroids were given for treatment. The patient was still experiencing. Intermittent tingling but tingling was not constant. Smile was not normal yet. The outcome of event was not recovered.; Sender's Comments: Based on the close temporal relationship, the association between the event Bell's palsy with BNT162b2 can not be fully excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	; ZYRTEC [CETIRIZINE HYDROCHLORIDE]
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910307-1	bilateral periorbital swelling; Myalgia; Fever; This is a spontaneous report from a contactable physician. A 49-year-old male patient received BNT162B2, via an unspecified route of administration on an unspecified date as single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced bilateral periorbital swelling, myalgia and fever on an unspecified date, which were medically significant. Description was as followed: patient went to the emergency department. The vaccines was given on a Wednesday afternoon, and patient presented with bilateral periorbital swelling this morning, myalgias, and fever. Therapeutic measures were taken as a result of swelling, myalgia and fever; the only treatment given was diphenhydramine (BENADRYL) orally. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, periorbital swelling, myalgia and fever, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910308-1	Diaphoresis; palpitations of 180-150 beats per minute, and SVT supraventricular tachycardia on the heart monitor.; palpitations of 180-150 beats per minute, and SVT supraventricular tachycardia on the heart monitor.; This is a spontaneous report from a contactable physician. A 56-year-old male patient received the first dose BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at 09:00 at single dose for covid-19 immunization. Medical history included hypertension, episode of SVT (supraventricular tachycardia) in the past. There were no concomitant medications. The patient experienced diaphoresis, and palpitations of 180-150 beats per minute, and SVT supraventricular tachycardia on the heart monitor on 18Dec2020. The events were reported as serious per medically significant. Event details: the patient received the vaccine 18Dec2020 at 09:00AM. About 40 minutes later the patient returned to hospital where he worked, where he received the vaccine, with diaphoresis, palpitations of 180-150 beats per minute, and SVT supraventricular tachycardia on the heart monitor. Reporter stated this was temporally related. Patient was given Adenosine 6mg IV with no response; then 12mg Adenosine with no response. Then the patient spontaneously cy corrected 10 minutes after the last dose of adenosine to 75 beats per minute and sinus rhythm, in one beat. The reporter was an emergency room (ER) physician and the patient was the ER right now. The patient was stable at time of reporting and expected to be discharged. The reporter did order a Troponin and cardiac workup. Troponin result was less than 6 which was normal. With regard to the Adenosine that didn't work reporter stated these vials usually went into a container and after consulting with another coworker stated the Adenosine vial had been discarded at this time and he was unable to provide NDC, lot or expiration date. The outcome of the events was resolved on 18Dec2020. Information on the lot/batch number has been requested.; Sender's Comments: Based on the close temporal relationship and the description of the events,diaphoresis, palpitations and SVT, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910314-1	had a syncopal event and hit her face when falling; had a syncopal event and hit her face when falling; hit her face; This is a spontaneous report from a contactable consumer via Pfizer sales representative. A 41-year-old female patient received BNT162B2 (Pfizer product) , via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. The patient medical history was none. The patient's concomitant medications were not reported. The patient had COVID vaccine administration yesterday (18Dec2020). She went to bed that night and woke up in the middle of the night to use the bathroom. She had a syncopal event and hit her face when falling. She required a trip to the urgent care and stitches. She was a healthy female with no underlying conditions. Event took place after use of product. Therapeutic measures were taken as a result of hit her face. The outcome of the events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910315-1	"Anaphylactic Reaction; felt like something was in throat; felt tingling on both hands and fingers; voice started to change; face turning red to white to purple; everything in mouth as tongue felt like it was growing; having chest pain radiating to left scalp, and jaw; couldn't think of the words to say as it was hard to breath; chills; heart rate is racing; This is a spontaneous report from a non-contactable nurse via internet source via Pfizer Sales Representative. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number: EH9899) via an unspecified route of administration on 18Dec2020 at single dose for covid-19 immunization. Medical history included had a lot of food allergies. The patient's concomitant medications were not reported. The nurse told that her manager (patient) had an anaphylactic reaction shortly after receiving Pfizer's COVID-19 BNT162b2 vaccine on 18Dec20. Patient stated via Social Media indicated that she received the Covid-19 vaccine right after work. Easy breeze didn't feel a thing. She was asked to wait for 15 minutes, 5-10 minutes of waiting, she felt like something was in throat, so she kept clearing it. Patient felt tingling on both hands and fingers. Her voice started to change. She informed the ER team there, the ER nurse described her face turning red to white to purple. ER nurse started an IV right on patient's right AC, gave her a shot of Benadryl, steroids and the epi pen right through pants. Patient felt everything in mouth as tongue felt like it was growing, but she can breath. Patient was route to the ED via wheelchair, everything started to look hazy, she was having chest pain radiating to left scalp, and jaw. Patient couldn't think of the words to say as it was hard to breath. When got to the ED they gave her another dose of Benadryl, solumedrol, decadron, HHN tx with epi and that worked. Patient felt her throat opening up and started talking but then came the chills. It took almost 3 hours to clear the symptoms, even though her heart rate is racing (prob due to the meds), she opted to go home. The outcome of ""heart racing"" was not recovered, of other events were recovered on 18Dec2020. No follow-up attempts are possible. No further information is expected.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of anaphylactic reactions with tongue swelling/voice alteration/hard breath/tingling/something in throat/skin discoloration, chill and chest pain cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910337-1	vaccine at 11:30 am on 12/18/20 and after 15 mins she felt the room started to spin, dizzy and tunnel vision. nausea and dry heaves also 2-3 mins after, persistent dizziness. pruritic rash and was taken to the ER by wheel chair. About an hour after the vaccine, she felt something in the back of her throat, speech ok, able to swallow. No SOB. She was treated with benadryl, pepcid, zofran and fluid. She felt very hot and shaking. In the ER, she noticed that the rash had progressed to her back. Notes chest redness, back with erythematous, raised pruritic bumps on back and arm (smaller size of dime) Within 4 hours of treatment, she had improved. That night at 2am she had a rash -not as pruritic. She took more benadryl. No rash after. No new meds, no NSAIDs. She has never had any medical problems or rashes before. Her symptoms are concerning for anaphylaxis but it is reassuring that her vitals were ok and that she did not progress and improved with benadryl and pepcid - advised to not get 2nd vaccine dose - will plan on skin testing her in the future	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910340-1	Around lunch time I felt inside my body a stinging sensation shooting down my body. 5-10 min it got worse and I felt my heart racing. I noticed I started getting a rash, it started on my chest, bottom and legs, I went to the ER where they recommended me a shot of Benadryl and a Pepcid. It took 3- 4 days for the rash to go away and 2 days for the itchiness to go away. It also broke out on my face a day later in the morning.	No	Lisinopril, Glipizide (blood sugar)
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910349-1	Nursing Notes: about an hour after COVID injection, severe vertigo, vomiting, severe headache, left arm completely numb, pt states she is sitting in her car in the parking lot of her apt, but not able to get out and walk bc the dizziness is too much. RN recommended ER disposition. Pt is going to take an Uber	Unknown	Unknown
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910376-1	Headache, body aches, joint pains and low grade fever with feeling warm and fatigue x 36 hours. Headache with severe cervical/thoracic spine/neck pain, fatigue, foggiess has persisted x 10 days. Associated nausea when pain is severe. Sometimes headache is improved; but it usually worsens in the evenings.	None	Prenatal vitamin DHA Vitamin D Vitamin E Vitamin C Ubiquinol
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910381-1	33 y.o. female who arrived by on-campus presented to the emergency department for onset of dizziness and a splotchy red rash after receiving the COVID-19 vaccine today. Patient states after onset of her symptoms she further sat down for approximately 15 minutes, but when she went back up to work she was further prompted to come down to the ED for evaluation. Denies wheezing, nausea, or abdominal pain. Denies a history of allergies. Patient tested positive for COVID-19 at the end of this past September. No prior immunization reactions Patient was given PO Benadryl and observed for one hour while here in the ED with no residual symptoms. Patient feels comfortable going home and will return for worsening symptoms. Will discharge patient with a prescription for Prednisone to use if symptoms return	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910386-1	Hives to bilateral arms and chest	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910391-1	5 days after I received the vaccine. I came down with severe abdominal pain. I went to the emergency department and was diagnosed with Acute Pancreatitis without a cause. I do not drink alcohol, and my gall bladder is working well, no gall stones noted to cause pancreatitis.	none	Omeprazole, Zyrtec
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910403-1	tachycardia	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910406-1	Patient had Hoarseness in her throat and felt like she could not breathe. Was given Benadryl, Prednisone and Pepcid.	None	Amlodipine 5mg, Ecotrin 81mg, Folic Acid 1mg, Benicar, Zocor 20mg
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910408-1	Patient presents to the ED with complaints of an allergic reaction that started approximately 5 minutes after receiving the COVID-19 vaccine. Patient states that she started to experience throat swelling, tingling on her nose and lips, as well as feeling a little dizzy. Patient denies any trouble breathing but states that she has slight chest pain on inspiration. Denies any other symptoms, denies any significant medical history, has not ever had a reaction to a vaccine before.	None	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910519-1	I had an elevated BP 218/116, shivering, sweating, light headed and had nausea.	No	I take zyrtec, singular, multi vitamins, flonase, zinc.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910538-1	Pt had Covid vaccine. 5 minutes after vaccine complained of tachycardia. HR initially to palpation was in the 220s. Pt assisted supine. Code Blue called per protocol. Dr. to room. Pts BPs were 160/80, 144/90, 140/84, and 138/80. HR 140, 134, and 123 bpm. O2 sat the whole time was 100% on RA. Pt c/o nausea and dizziness. Assisted to stretcher and brought to ER for evaluation. Pt state she had a previous history of Covid and anxiety but this experience felt different to her then her previous panic attacks. No rash, wheezing, oral swelling, pruritis.	H/o Covid unsure of when diagnosis was. Not in the past 2 weeks.	Escitalopram 10mg
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910540-1	Reporting on behalf of staff member. She received covid vaccine on 12/24. The following day, she experienced extreme weakness/fatigue, migraine, low grade fever, body aches, and tachycardia. She went to the ER, they gave her IV fluids, pain meds and tylenol with no relief. She was monitored for awhile and then sent home to rest and recover. 3 days later (12/27) she says she feels significantly better, but still a little tired.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910553-1	35 y.o. female who arrived by to the emergency department for Allergic reaction. Patient got the shot at approximately 8:10 AM and subsequently developed tingling in the back of her throat and felt like she had some swelling. She alerted staff who brought her here for further evaluation. She currently denies any trouble swallowing, voice changes, tongue, lip swelling, rash, abdominal pain, nausea, vomiting, diarrhea. Able to speak in full sentences without difficulty, not in respiratory distress. She is also able to drink water in the emergency department without difficulty. Will dose with Benadryl and observe. Patient was observed for over 2 hours in the emergency department with event of her symptoms. Doubt anaphylactic reaction at this time as she had no other symptomatic involvement. Patient safe for discharge home at this time.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910554-1	"patient received the vaccination and within a few minutes she developed sore throat, wheezing; patient received the vaccination and within a few minutes she developed sore throat, wheezing; This is a spontaneous report from a contactable nurse. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 18Dec2020 at 08:30 at single dose for COVID-19 immunisation. Relevant medical history and concomitant medications were not reported. On 18Dec2020 at 08:30, the patient experienced sore throat and wheezing; within a few minutes she developed sore throat, wheezing. Facility where the COVID-19 vaccine was administered was workplace clinic. The adverse events resulted in Emergency room/department visit or urgent care. The patient received "RT" treatments. It was unknown if prior to vaccination the patient was diagnosed with COVID-19 and it was unknown if she was tested for COVID-19 since the vaccination. The outcome of the events was unknown. Information on the lot/batch number has been requested."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910560-1	nausea; dizziness; Progressed to tachycardia; heart rate from 60-120; This is a spontaneous report from a contactable consumer. A 37-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via an unspecified route of administration at left arm on 18Dec2020 at 07:45, single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. The patient, approximately 15 minutes after shot, experienced mild nausea and dizziness. Progressed to tachycardia, heart rate from 60-120. Felt it racing and pounding. Went to emergency room for evaluation. The patient underwent lab tests and procedures which included heart rate: 60-120. Therapeutic measures were taken as a result of the events and included electrocardiogram (EKG) and telemetry monitoring.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910562-1	Right neck pain radiates from shoulder blade to occiput; Tightness of chest and fluttering in chest that made me cough persistently; Tightness of chest and fluttering in chest that made me cough persistently; BP elevated 150/90; I had EKG report read occasional PVC.; This is a spontaneous report from a contactable nurse reporting for herself. A 45-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular in the left arm on 18Dec2020 10:15 at single dose for covid-19 immunisation at hospital. Medical history included asthma, eczema, allergies to PCN (penicillin), whey, glutamate, gluten, sulfites. Concomitant medication included isosorbide mononitrate (FLO). On 18Dec2020 at 10:45 the patient experienced right neck pain radiates from shoulder blade to occiput. Tightness of chest and fluttering in chest that made her cough persistently. BP elevated 150/90, no prior history of hypertension. In ED for check-up, the patient had EKG report read occasional PVC. Labs all within normal limits and symptoms and BP better within 1.5 hours so discharged to home. The patient was not treated for the events. Prior to vaccination the patient was not diagnosed with COVID-19 and has not been tested for COVID-19. Information on the lot/batch number has been requested.	No current illness for this event.	FLO
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910563-1	numbness shoulder/extends numbness left leg weak when stood(felt numb)/numbness; This is a spontaneous report from a contactable consumer. A 49-year-old female patient (not pregnant) received bnt162b2 (BNT162B2, also reported as Pfizer-BioNTech COVID-19), via an unspecified route of administration on 18Dec2020 13:15, single dose (dose number 1) in left arm, for immunization. Medical history included allergies to food, perfumes, fragrance, smoke and residual odor. Other medical history includes asthma, OSA (obstructive sleep apnea), borderline DM, anxiety and depression. The patient previously took VICODIN and had drug hypersensitivity. She had no other vaccines in four weeks but had other medications (specified) in two weeks. The patient reported that on 18Dec2020 at 13:30 she experienced left arm lateral numbness shoulder- last 3 finger, extended numb to pointer finger, extends numbness shoulder up left neck to lips midpoint the complete lips extended to right side of face and neck and then to right temporal, ear and down to clavicle; left leg weak when stood(felt numb). She developed asthma exacerbation by 0900 and started to resolve in ER. About 0018 numbness now in lips, around lips, tongue, and starting down neck. Treatment for the event were Epinephrine IM, Benadryl, Dexamethasone, ab. She also had CXR (chest x-ray), no results reported. The outcome of events was recovered with Sequel. Information on the lot/batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910582-1	High blood pressure; heart rate in the 100's/High heart rate; light headed and dizzy; This is a spontaneous report from a non-contactable nurse(patient). This female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) at single dose via an unknown route on Dec2020 (reported as on Thursday) for Covid-19 immunization. Medical history and concomitant drug were not provided. Patient received the vaccine on Thursday and within 15 to 20 minutes, she got light headed and dizzy with high blood pressure with a heart rate in the 100's. She went to the ER and was sent home, but her blood pressure continues to be high. Her primary care physician wanted to start her on some blood pressure medication due to continuous high blood pressure. The reporter was asking if high blood pressure and high heart rate had been reported as an adverse event for the Covid vaccine. Outcome of High blood pressure was not resolved. Outcome of the other events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.; Sender's Comments: A causal association between BNT 162B2 and the events blood pressure increased, dizziness, and heart rate increased cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910591-1	Vomit; Coughing; Felt like Throat was itchy; This is a spontaneous report from a Non-contactable Nurse. A 41-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EH9899) intramuscular on Left arm on 21Dec2020 16:30 at single dose for COVID-19 immunization. Medical history included allergies to medications, food, or other products. There were no concomitant medications. The patient did not receive any other medications within 2 weeks of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 21Dec2020, 10 minutes after the vaccine the patient began to vomit, felt like throat was itchy, and began coughing. Events resulted that she was taken to the ER (Emergency room). She received Epinephrine, Dexamethasone as treatment for events. Events outcome was recovered on 21Dec2020. No follow-up attempts are possible. No further information is expected; Sender's Comments: A causal association between BNT162B2 and the reported events vomiting, cough, and itchy throat cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910595-1	broke out in hives on face and hoarseness, tightness in throat; broke out in hives on face and hoarseness, tightness in throat; broke out in hives on face and hoarseness, tightness in throat; throat pain, coughing; throat pain, coughing; This is a spontaneous report from a contactable Other HCP. This Other HCP reported for self that the 57-year-old female patient received fist dose of bnt162b2 (BNT162B2, Brand Pfizer), via unknown route of administration in Left arm on 21Dec2020 12:00 PM at single dose for covid-19 immunisation. Medical history included Known allergies to medications, food, or other products: Azithromycin Flushing, Spinach-anaphylaxis, mild allergic reactions to the Ocrevus, azure and Seasonal allergies, Multiple Sclerosis, Irritable bowel syndrome (IBS-C), post herpetic neuralgia. Concomitant medications included other medications the patient received within 2 weeks of vaccination baclophen, clozapine (KLOPIN), ocrelizumab (OCREVUS), sertraline, cetirizine hydrochloride (ZYRTEC [CETIRIZINE HYDROCHLORIDE]), mo. She is not pregnant at the time of vaccination. Facility type vaccine was Hospital. No other vaccine in four weeks. The patient experienced within 15 to twenty minutes of vaccine, broke out in hives on face and hoarseness, tightness in throat then sent to ED where hives continued to form on back the arms, throat pain, coughing, hoarseness increased from 21Dec2020 12:15 AM. AE resulted in: [Emergency room/department or urgent care]. Outcome of the events was unknown. Treatment received included Epinephrine, solumedrol, Benadryl IV. No covid prior vaccination. Covid tested post vaccination. Covid test post vaccination: covid test type post vaccination was Other, covid test name post vaccination was Nasopharyngeal Sofia2 SARS Antigen on 21Dec2020 with result of Negative. Facility where the most recent COVID-19 vaccine was administered was Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, has the patient been tested for COVID-19. Test Name was Nasopharyngeal Sofia2 SARS Antigen. Vaccine Facility information available. Information on the lot/batch number has been requested.; Sender's Comments: Based on the close temporal relationship, the association between the reported events with BNT162b2 can not be completely excluded. Medical history of known allergies may have predisposed patient to react this way. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	BACLOPHEN; KLOPIN; OCREVUS; ; ZYRTEC [CETIRIZINE HYDROCHLORIDE]
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910596-1	I elevated heart rate to 159, I was hot, flush, sweating, elevated BP 154/94 which is high for me. I stayed 15 more minutes and everything was back to normal. The next morning I had a headache. By noon, I had vomiting. I went for a COVID 19 test.	No	I take sumatriptin for migraines as needed, armothyroid and prenatal due to nursing.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910605-1	She gained some weight and she thinks she was told she was 84 or 86 kg at the clinic. She weighs about 175 pounds; An EKG was done and she was told she had a prolonged qt interval; Her blood pressure went really high to 177/110; This is a spontaneous report from a contactable consumer. This consumer [patient] reported that the 48-year-old female patient received bnt162b2 (BNT162B2, Batch/lot number: EK5730), via intramuscular injection in left upper arm on 19Dec2020 07:30 am at single dose for covid-19 immunisation (Preventative). Medical history and concomitant medications were none. She got the Pfizer Biontech covid vaccine on the 19Dec. She was sent over to ER from the (clinic name) since her blood pressure went really high to 177/110 on 19Dec2020. Her blood pressure stayed around 170/100 and then she would rest for 10-15 minutes, the ER kept her there till her blood pressure went to about 144 or 150 and then she went home. She confirmed she was not admitted. She was told to go back to the ER if her blood pressure went up. An EKG was done and she was told she had a prolonged qt interval on 19Dec2020. She has not had an EKG since and was told to follow up with her doctor. Treatment: declines any, they just monitored her. When querying weight, states she knows she gained some weight and she thinks she was told she was 84 or 86 kg at the clinic. She weighs about 175 pounds. Reports she had some blood work done at the ER and it came back normal. She does not have any health conditions. She has an allergy to Cipro and fexofenadine. Vaccination Facility Type was Hospital. No Vaccine Administered at Facility. History of all previous immunization with the Pfizer vaccine considered as suspect (or patient age at first and subsequent immunizations if dates of birth or immunizations are not available was none. Additional Vaccines Administered on Same Date of the Pfizer Suspect was none. AE(s) required a visit to Emergency Room. No Physician Office. Prior Vaccinations (within 4 weeks) was none. AE(s) following prior vaccinations was None. The outcome of the events was unknown.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910621-1	itching; tingly feeling; face appeared more flushed; slight shortness of breath; This is a spontaneous report from a contactable pharmacist. A 63-years-old female patient received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot# EK5730), intramuscularly in right arm on 18Dec2020 14:30 at single dose for Covid-19 immunisation. Medical history included allergic reactions (allergies to medications, food, or other products: Yes, numerous). No other vaccines administered in four weeks. Other medications in two weeks was numerous. Approximately 10-15 minutes after receiving COVID-19 vaccine (18Dec2020 14:45), patient reported itching, tingly feeling, face appeared more flushed. Seemed anxious due to history of allergic reactions and reported slight shortness of breath. Treated with diphenhydramine 50 mg PO and epinephrine 0.5 mg IM and transported to Emergency Department. Observed in that area and released a few hours later as symptoms resolved. The outcome of events was recovered on 18Dec2020.; Sender's Comments: A causal association between BNT162B2 and the events pruritus, paraesthesia, flushing, and dyspnea cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910628-1	blood pressure shot up to 205/112/blood pressure went down to 136/75; head hurt; couldn't hear that well; pulse 137; a heat wave go through her body up to her head; red rash and hives; red rash and hives; This is a spontaneous report from a contactable other healthcare professional (Patient). A 62-year-old female patient (not pregnant) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection, lot number and expiration date not provided), via an unspecified route of administration on 21Dec2020 16:00 at single dose for COVID-19 immunization, vaccine location provided as Left arm. Medical history included Penicillin allergy. The patient's concomitant medications were not reported. After about 10 minutes receiving the vaccine on 21Dec2020 16:15, the patient felt a heat wave go through her body up to her head, couldn't hear that well and head hurt. Her blood pressure shot up to 205/112, pulse 137, red rash and hives. The patient was transported via paramedics to the Emergency Room for observation. Her blood pressure went down to 136/75. No treatment was received for all the event. The outcome of the events was recovered on 21Dec2020. Information on the Lot/Batch number has been requested.; Sender's Comments: A causal association between BNT162B2 and the event blood pressure increased cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910630-1	the individual has had seizures that have lasted approx 3 days; anaphylactic reaction; This is a spontaneous report from a contactable pharmacist. A 19-year-old male patient received BNT162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number and expiry date unknown), via an unspecified route of administration on 19Dec2020 at single dose for covid-19 immunization. The patient medical history and concomitant medications were not reported. The patient received the vaccine on 19Dec2020. 12-15 mins after receiving the vaccine, the individual has had seizures that have lasted approximately 3 days, has had multiple seizures since then. The patient was taken to the Emergency department, given epipen (Epi pen), was without symptoms for 24 hours at some point, during the 3 day time period and as of 22Dec2020, the patient was continuing to have seizures. The patient started having issues again on 21Dec2020 and 22Dec2020 (yesterday and today). He had more issues with seizures last night on 21Dec2020 and had seizures this morning. The individual also had an anaphylactic reaction in Dec2020 but didn't not elaborate on this. The reporter was wondering if he can get information that this has happened before and wanted information on reversing the situation because the doctors need help. Outcome of the event seizures was not recovered, of other event was unknown. Information on the Batch/Lot number has been requested.; Sender's Comments: A causal association between BNT162B2 and the events seizures and anaphylactic reaction cannot be excluded based on compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910635-1	New diagnosis of diabetes 5 days after receiving vaccine with no past medical of DM and no family history; This is a spontaneous report from a contactable Nurse (patient). A 31-year-old female non-pregnant patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number=EJ1685), via an unspecified route of administration on 18Dec2020 14:00 at arm left at single dose for covid-19 immunization. The COVID-19 vaccine was administered at Hospital. Medical history included asthma and hypertension. The patient had no known drug allergies. Concomitant medication included cetirizine, budesonide, formoterol fumarate (SYMBICORT), escitalopram oxalate (LEXAPRO), montelukast and omalizumab (XOLAIR). No other vaccine in four weeks prior to the COVID vaccine. The patient experienced new diagnosis of diabetes 5 days after receiving vaccine with no past medical of diabetes mellitus and no family history. The event result in doctor or other healthcare professional office/clinic visit and Emergency room/departement or urgent care. Adverse event start date was 19Dec2020 06:00 AM. Treatment received included fluid bolus, computerized tomogram (CT) scan and labs. The patient underwent lab tests and procedures which included computerized tomogram and laboratory test with unknown results on Dec2020. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient was not been tested for COVID-19. The outcome of the event was recovered with lasting effects.; Sender's Comments: The reported diabetes was unlikely causally related to the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), considering the latency of the onset of the event. A possibility that the vaccination unmarked subject's diabetes cannot be completely excluded. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	; SYMBICORT; LEXAPRO; ; XOLAIR

A 28-years-old female patient received first dose BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/ batch number: 33121, brand: EJ1685), via an unspecified route of administration at left arm on 18Dec2020 09:30 at single dose for covid-19 immunization at hospital. Medical history included anxiety, depression, diagnosed COVID-19 prior vaccination. No known allergies. Concomitant medication included fluoxetine hydrochloride (PROZAC) in two weeks. No other vaccine in four weeks. The patient experienced bell's palsy/facial paralysis on 21Dec2020 19:00 with outcome of not recovered. The seriousness was reported as no. The adverse event result in doctor or other healthcare professional office/clinic visit, Emergency room/departement or urgent care. The treatment received for the adverse event was reported as unknown.; Sender's Comments: Based on available information, a possible contributory role of the subject vaccine cannot be excluded for the reported event of Bell's palsy due to temporal relationship. However, the reported event may possibly represent intercurrent medical condition in this patient. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	PROZAC

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910645-1	"splotchy rash that started on both of her arms; she was not ok, and she felt weird, and stated something feels wrong; she felt dizziness and like she needed to pass out; she felt dizziness and like she needed to pass out; her knees buckled and she lost her balance; her knees buckled and she lost her balance; hyperventilating and couldn't slow her breathing from fear; hyperventilating and couldn't slow her breathing from fear. This is a spontaneous report from a contactable nurse (patient). A 30-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) lot no: EK5730, via an unspecified route of administration in right arm on 21Dec2020 16:30 at a single dose for COVID-19 immunization. Medical history included bilateral mastectomy, total hysterectomy, breast cancer gene 2 (brca 2), ankylosing spondylitis (AS), allergies to penicillins and latex. The patient was not pregnant at the time of report. Concomitant medications included isotretinoin, estrogens conjugated (PREMARIN), cetirizine hydrochloride (ZYRTEC), meloxicam. The patient previously took ciprofloxacin and experienced allergies. On 21Dec2020 at 16:45, the patient reported that she showed a nurse a splotchy rash that started on both of her arms. At that time, she also stated she was not ok, and she felt weird, and stated something feels wrong. Then she said that she felt dizziness and like she needed to pass out. The nurse asked if she could still breathe and she said ""I think so."" They asked her to stand then when she did her knees buckled and she lost her balance and was dizzy and more fell back into the chair she was sitting in. Then they just lift her onto the gurney. On the way to the emergency department, she began hyperventilating and couldn't slow her breathing from fear. Upon arrival she was asked for her name and birthdate and she slowly was able to say it. She was told she was given epinephrine, 2 rounds she thinks for her hives that had showed and her respiration was in the 39-49 range. Then they gave her methylprednisone (reported as ""methypedison""), famotidine (PEPSID), and steroids, and lorazepam (ATIVAN) to calm her breathing as well as IV fluids. Then she was able to breathe 20-35 rpm. The patient was not diagnosed with COVID-19 prior to vaccination and has not been tested for COVID-19 since the vaccination. The events were reported as non-serious. The patient recovered from the events.; Sender's Comments: The patient had medical history included allergies to penicillins and latex., and to ciprofloxacin. The reported events were probably related to the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), due to temporal relationship. Patient's drug allergy history and nervousness may have played to contribution role to the clinical manifestations. This case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics committees and Investigators, as appropriate." COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910699-1	On 12/22/2020 we had 1 patient who had a severe allergic reaction to covid 19, after she was administered covid 19 vaccine at about 11 am she went in to the observation area for 15 minutes. while there under the observation of the facility staff members she reported to them that she was having some difficulty breathing and her lower throat was closing up. the staff member came over to the administration area to ask me to bring the epi-pen because they have someone with anaphylactic allergy reaction. I ran over there with a box of epi-pen and patient stated she is having difficulty breathing and her throat is swelling up and I noticed her lips were turning blue. at that time I administered the epi-pen and asked the facility members to call 911. which the facility members did promptly. I kept her under observation with the 2nd pen ready just in case it was needed. the EMS showed up within 15 minutes and took over from there and transported her to the hospital. The staff members at the facility also called the patients doctor to inform him of the allergic reaction. I followed up with patient on 12/23/2020 at 4:37 pm. and at that time she was doing fine. she informed me that all of her symptoms of the allergic reaction have gone away and all she has is some cough and some shortness of breath. she had been discharged by the hospital and is on some steroids and under her physicians care. I talked to employee at store as he is the one charged with recording this incident and he has informed me that he talked to the facility administrator and facility administrator informed him that both patients have recovered completely and were back to work today on 12/23/2020	none	unknown

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910911-1	I am a nurse and I received the Pfizer vaccine on 12/26 at 1030am. I do have a history of food and outdoor allergies. I once got hives on my back from the flu shot, but since have been fine with it if I take Benadryl before it. About an hour after the vaccine, I felt itchy on my upper half of my body. I took a Benadryl without relief. I had a 100.1 fever that afternoon so I took another Benadryl and ibuprofen. It broke my fever, but the itching continued. I also had a couple of hives and a red blotchy rash over my body. I took a hydroxyzine and was able to sleep that night. The next morning I once again felt flushed and itchy. I worked and came home to the same rash, almost mottled looking all over my body. I took a Benadryl and ibuprofen and woke up early this morning itching again. As I was driving into work today (Monday), I noticed my heart fluttering and having palpitations. This continued throughout the morning. My skin rash is still red like I have a bad sunburn all over and is itchy with some red spots. I went to the ER to get checked out. My ekg was normal. They advised me that this is an allergic reaction to the vaccine and to continue 50mg Benadryl q6h for a couple more days and to see a PCP for follow up if it's not better. I never had respiratory issues or swelling, I will continue to monitor symptoms and reaction.	None	none
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910918-1	39 y.o. firefighter, healthy without significant past medical history. He has a hx with cashew allergy in the past (required Epi pen use). He felt light headed, flushing sensation, and mild itchiness on the arm. His light headed felt worse and laid on ground. He remained alert and without apparent distress. There was no respiratory or cardiac complaints. Vital signs were normal. O2 sat 100% on RA, BP 119/77, pulse 65, EKG NSR. Paramedics and his colleagues were present and assisted. Benadryl 50 mg IM once was given around 1300 pm. An IV 18 G was placed by paramedics to his right AC and NS dko. Patient left via ambulance.	No	NO
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910924-1	Patient is a 60yoF who is presenting to ED on 12/28/20 complaining of decreased sensation and itching on left side of face as well as darkening of peripheral vision on the left side. She received her initial COVID vaccine today at 11am, first began noticing symptoms at 1230 and took 2 benadryl around 1pm. In addition, she is reporting some light headedness. She states that her face feels swollen, but knows that it is not. Itching improved after benadryl but face continues to feel numb on left side.	None	levothyroxine 112 mcg PO Daily PARoxetine 20 mg PO Daily
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	910931-1	Approximately 5 minutes post vaccine administration, pt reported shortness of breath and chest tightness. Vital signs remained stable BP 100/65, O2 sat 97%, HR 80-100, respirations easy and unlabored. Pt also experienced nausea without vomiting, and possible tightness in the throat, and numbness in the left arm. No swelling, no redness, no rash. EMS was called, EKG showed NSR, pt was transported to the hospital via EMS	No current illness for this event.	No other medications for this event.

Vaccinated on 12/16 - 10 days later on 12/26/20 tongue numbness recurred & he developed (R) facial droop - seen in ER on 12/17 had normal head CT, negative work up for stroke. Seen in clinic on 12/28 - diagnosed with Bells palsy, started on Valacyclovir. Patient will hold PrEP x7 days (precautionary), no sexual activity during that time.	none	PrEP (Emtricitabine/Tenofivir) Albuterol inhaler Fluticasone/Salmeterol inhaler Montelukast Fexofenadine Cyclobenzaprine Fluoxetine
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	911097-1	MD Notes in ED Patient is a 35yo female who presents with complaint of allergic reaction. This AM around 0945 received COVID vaccine. Some pain to injection site throughout the day. Today around 1700 started to note dizziness and hives throughout her body. Hives are itchy. Associated with nasal congestion and sore throat. Patient felt difficulty swallowing zyrtec/pepcid. No drooling. Patient without fevers/chills, no recent illness. Denies prior allergies to immunizations. Denies food allergies. No new medications. Another part of the record states she had hives 30 minutes after the vaccine and self-medicated with Zyrtec and Pepcid without relief. Treated in the ED with Epi 0.3 IM SoluMedrol 125 mg IV Pepcid 20 mg IV Benadryl 50 mg IV IV fluids Arrived in ED 1836 / Discharged home at 2015	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	911108-1	received COVID vaccine, dose 1, Pfizer, approximately 1600. During observation, became light headed, hot, tingling in hands and feet, with onset of nausea shortly after. given ice packs and encouraged to remain in observation another 15 minutes. denied SOB, itching, no apparent hives or swelling. At approx 1700, symptoms had not resolved, was taken to ED for evaluation.	none	none
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	911115-1	Left Shoulder pain that started as 7oh I slept funny? to not going away with ice/heat or rest. Worsening in severity daily and spreading towards base of skull and eventually into clavicle. The pain became excruciating and I was unable to turn my head at all to the left. So bad I had to use my hands to lift my head up. I eventually went to the ED on 12/27/20. And overnight the pain became so unbearable and functionality so limited I couldn't go to work or take care of my toddler. I returned the to ED on 12/28/20. Was advised to file adverse event and contact my employee health and safety department. I was initially examined in the ER the first time with a neck spasm. Sent home with an RX which didn't work. At all. When I returned to the ER th next day, the physician felt my entire neck, shoulder and clavicle an noted swelling and prominent spasm. He diagnosed with a trapezius strain and a vaccine reaction. Gave me an RX for Valium which seems to help take the edge off.	Treatment for left thumb pain Prior lumbar fusion 2013	Zoloft 100 mg daily Vitamin D3 Xanax 0.5 PRN Synthroid 75 mcg daily Colon max supplement Magnesium 500 mg nightly

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	911415-1	dizziness/lightheadedness; severe nausea; rash/hives on chest and back and forearms; rash/hives on chest and back and forearms; severe chills/shivering; This is a spontaneous report from a contactable nurse (patient). A 28-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscularly on 18Dec2020 11:30 AM at Left arm, at SINGLE DOSE for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient was not pregnant at the time of vaccination. The patient experienced dizziness, lightheadedness, severe nausea, rash/hives on chest and back and forearms, severe chills/shivering on 18Dec2020 11:45 AM. The patient received treatment fluids, pepcid, Benadryl for these events. There events resulted in: Emergency room. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The outcome of the events was recovered in Dec2020. No seriousness criteria: no Results in death, no Life threatening, no Caused/prolonged hospitalization, no Disabling/Incapacitating, no Congenital anomaly/birth defect. Information on the lot/batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	911457-1	COVID-19 confirmed by positive COVID-19 test; COVID-19 confirmed by positive COVID-19 test; This is a spontaneous report from a contactable other health professional (reported for himself). A 30-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 17Dec2020 10:00 at single dose on left arm for COVID-19 immunization. Medical history known allergies: PCN (Penicillin). The patient's concomitant medications were not reported. The most recent COVID-19 vaccine was administered at Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has been tested for COVID-19 via Nasal Swab and the test name was PCR with the result of positive on 22Dec2020 (12:00). This wasn't really an adverse event but the reporter thought it may be useful for studies taking place. On 22Dec2020 12:00 PM, the patient was diagnosed with COVID-19 5 days after vaccination and was currently self-isolating. The adverse event result in Emergency room/department or urgent care. No treatment was received for the adverse events. The events were considered as non-serious by the reporter. The outcome of the events was recovering.; Sender's Comments: Based on the current available information and the consistency with the known safety profile of the suspect product BNT162B2, a possible contributory role of the suspect product to the development of Drug ineffective and COVID-19 cannot be excluded.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	911540-1	Right lower quadrant pain; back of throat tight and full and moved to tongue; fullness in ears; some itching and fullness on the right side near the back of her tongue; This is a spontaneous report from a contactable nurse (patient). A 50 years old female patient (weight 81.65 kg and height 173 cm) received BNT162B2 (Pfizer-Biontech covid-19 vaccine, Lot. EL1284) on 22Dec2020, at single dose, for COVID-19 immunisation. Relevant medical history and concomitant medications were none. It was reported that she had no allergies to anything. On 22Dec2020, the patient experienced a sharp pain in her lower right quadrant of her abdomen, then her ears started getting full, then the back of her throat started getting tight and full and moved to her tongue. It was also reported that she started feeling some itching and fullness on the right side near the back of her tongue. Her airway was intact. Nurse clarified that her reaction last night after the vaccination all happened within 12 minutes of receiving the shot. She went to the emergency room for observation and was treated with epi and Benedryl. She went home after a couple of hours. Clinical outcome of the events was recovering at time of this report. The adverse event, right lower quadrant pain, was assessed as serious (medically significant); Sender's Comments: By close temporal relationship ('within 12 minutes of receiving the shot') and absence of factors which may provide an alternative cause, the company cannot exclude a contributory role of the BNT162B2 administration in the development of the serious event reported as 'sharp pain in her lower right quadrant of her abdomen'. The impacts of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	911543-1	Started feeling unwell Monday night and sick by Tuesday night. Extreme fatigue Tuesday AM, nausea & fatigue & headache. By Tuesday night, very sore throat and extreme fatigue. Wednesday very congested, sore throat, swollen and painful lymph nodes. Went to urgent care & swabbed for COVID and strep. Both negative (tests were rapid and PCR). Since Wednesday continuing through today 12-28-20 - congestion, sore throat, coughin, swollen painful lymph nodes, some GI issues, headache, and fatigue. Return to PCP on 12-29-20	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	911549-1	1 hour after vaccination, itchy eyes, swollen lip, tickle/scratchy throat. Went to ED. Took 25mg benadryl. Observed x 5 hours. Symptoms improved.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	911574-1	Patient experienced a syncopal episode after receiving the COVID-19 vaccine. Patient transferred to the emergency department. Upon arrival to the emergency department, patient was awake and alert with GCS of 15. Patient did state she felt a little dizzy. Patient denied any nausea, vomiting, or abdominal pain. Patient received IV fluids. Patient was reassessed and stated she felt significantly improved. Patient discharged at 1300 on 12/23/2020.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	911581-1	Patient reported flushing in the face, tingling on the left side down the left arm and then began to break out into hives on their chest. The individual also had a rapid heart rate and needed a wheel chair due to feeling slightly faint.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	911594-1	Pt c/o mottling of palms, tingle in arm; pt became hypertensive with headache within 15 minutes of vaccine; symptoms resolved and pt dc from ED	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	912054-1	Severe heartburn; abdominal pain; Agita; swelling; chest tightness; generalized redness; itching; sore throat; severe weakness; fatigue; headache; muscle pain; nausea; malaise/feeling unwell; increased temp but not febrile; This is a spontaneous report from a contactable nurse, the patient. A 63-year-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), intramuscular in the left arm on 18Dec2020 at 14:15 (at the age of 63-years-old) as a single dose for COVID-19 immunization. Medical history included chronic pain, hypertension, diabetes, depression, and broken vertebra. The patient was allergic to many antibiotics and benzodiazepines which caused dystonia. The patient also had an allergy to all anti-emetics except ondansetron (ZOFRA) in the form of dystonia. Prior to the vaccination, the patient was not diagnosed with COVID-19. Ongoing concomitant medications included diclofenac (MANUFACTURER UNKNOWN) from an unknown date for an unknown indication, esomeprazole magnesium (MANUFACTURER UNKNOWN) from an unknown date for an unknown indication, fentanyl (MANUFACTURER UNKNOWN) for a broken vertebra from an unknown date, gabapentin (MANUFACTURER UNKNOWN) from 2019 for an unknown indication, misoprostol (MANUFACTURER UNKNOWN) from an unknown date for an unknown indication, oxycodone hydrochloride/paracetamol (PERCOCET) from an unknown date for an unknown indication, and fentanyl (FENTANYL PATCH) from an unknown date for an unknown indication. The patient did not receive any other vaccines within four weeks prior to the vaccination. On 18Dec2020 at 14:30, the patient experienced generalized redness, itching, swelling, and chest tightness; which required her to go the emergency room for 6 hours and was treated with epinephrine (MANUFACTURER UNKNOWN), diphenhydramine hydrochloride (BENADRYL), and fluids. On an unknown date in Dec2020 (reported as later), the patient had sore throat, severe weakness, fatigue, headache, muscle pain, nausea, malaise/feeling unwell, and increased temperature but not febrile. On 22Dec2020, the patient had severe heartburn, abdominal pain, and agita. Since the vaccination, the patient had not been tested for COVID-19. The clinical outcomes of generalized redness, itching, swelling, chest tightness, sore throat, severe weakness, fatigue, muscle pain, nausea, malaise/feeling unwell, and increased temperature but not febrile were recovering; while that of the headache, severe heartburn, abdominal pain, and agita were not recovered. The events were reported as non-serious and assessed as possibly related to the vaccine. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.; Sender's Comments: The patient was allergic to many antibiotics and benzodiazepines and had an allergy to all anti-emetics except ondansetron (ZOFRA) in the form of dystonia. Based on information available, the reported chest tightness and swelling together with generalized redness and itching were possibly related to the BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), considering temporal relationship and clinical course. This case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	;;;; PERCOCET [OXYCODONE HYDROCHLORIDE;PARACETAMOL]; FENTANYL PATCH
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	912059-1	Hypotensive (diastolic 43, systolic 103); neurological tingling -upper spine/between shoulder blades; felt crummy; This is a spontaneous report from a contactable consumer. A female patient of an unspecified age received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in left arm on 21Dec2020 15:45 at single dose for Covid-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient experienced hypotensive (diastolic 43,systolic 103), neurological tingling - upper spine/between shoulder blades and generally felt crummy on 21Dec2020 at 15:45 (also reported as occurred within 5 minutes of shot). The patient underwent lab tests and procedures which included blood pressure measurement: 103/43 on 21Dec2020. Event resulted in emergency room and physician's room visit. Treatment received intravenous (IV) fluid replacement, lab tests (unspecified), 6 hour observation. The outcome of events was unknown. Information on the lot/batch number has been requested.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	912063-1	<p>hypertensive emergency; felt like the swelling was progressing into the back of her throat; swallowed harder; she felt like she was hot in her face and felt like something was squeezing her neck like a tight collar on her shirt; she felt like she was hot in her face and felt like something was squeezing her neck like a tight collar on her shirt; shivering on and off; This is a spontaneous report from a contactable pharmacist. This pharmacist reported similar events for two patients. This is the first of two reports. A 67-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EH9899), intramuscularly in an unspecified arm on 21Dec2020 14:30 at 0.3 mL single for COVID-19 immunization. Medical history included sulfa allergy. The patient's concomitant medications were not reported. There were no prior vaccinations within 4 weeks prior to the first administration of the suspect vaccine. The patient did not have a history of reactions to any other vaccines. On 21Dec2020, the patient experienced hypertensive emergency, which was reported as being medically significant. On 21Dec2020, the patient also felt like she was hot in her face and felt like something was squeezing her neck like a tight collar on her shirt, shivering on and off, felt like the swelling was progressing into the back of her throat and she swallowed harder. Clinical details were reported as follows: the patient received the vaccine on 21Dec2020 at 14:30 and fairly quickly the patient started saying she felt like she was hot in her face and felt like something was squeezing her neck like a tight collar on her shirt. She was given 25mg of diphenhydramine hydrochloride (BENADRYL), orally. The patient was shivering on and off and patient said she felt like the swelling was progressing into the back of her throat. She was having to clear her throat and swallow harder. She was taken to the emergency department around 15:11 and given intravenous (IV) famotidine (PEPCID) 20mg at 15:27. The patient did not have issues oxygenating. It was noticed that the patient's blood pressure was 232/100 on 21Dec2020 and they started treating her for the hypertensive emergency with amlodipine (MANUFACTURER UNKNOWN) 5mg orally, one time of IV labetalol (MANUFACTURER UNKNOWN), 10mg , IV labetalol (MANUFACTURER UNKNOWN) 20mg once, Clonidine (MANUFACTURER UNKNOWN) 0.1mg, orally. The patient was sent home around midnight and was not admitted to the hospital. The outcome of hypertensive emergency was recovering and of patient also felt like she was hot in her face and felt like something was squeezing her neck like a tight collar on her shirt, shivering on and off, felt like the swelling was progressing into the back of her throat and she swallowed harder was unknown. When querying causality, the reporter stated this patient did not have a history of hypertension, so she thinks it is suspicious.; Sender's Comments: The 67-year-old female patient had sulfa allergy medical history. Throat swelling and hypertensive emergency were possibly related to the BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), considering temporal relationship and clinical course. This case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate..Linked Report(s) : US-PFIZER INC-2020510772 Same reporter/different patient/similar events</p>	No current illness for this event. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	913912-1	BP of 176/126mmhg/persistent severe hypertension/continued severe elevation of BP of 178/130mmHg; intermittent chest pains; severe nausea; rash and hives on left side of arm where injection site was, as well as left side of face; rash and hives on left side of arm where injection site was, as well as left side of face; mild progressive headache; body aches; chills; fatigue; fever of 100 degree F; This is a spontaneous report from a contactable Other Health Professional (patient). A 29-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: unknown, intramuscular in the left arm, first dose on 18Dec2020 12:30 at a single dose for immunisation. Medical history included ongoing gestational hypertension in 2016 that never recovered, with controlled hypertension, asthma/COPD, and seasonal/animal allergies. Concomitant medication included sertraline hydrochloride (ZOLOFT) and losartan. The patient is not pregnant. The patient previously took and had allergies to erythromycin and nitrous oxide. It was reported that within 20-30 minutes of receiving covid vaccine on 18Dec2020, the patient developed mild progressive headache, body aches, chills, fatigue, fever of 100 degree F. At approximately 8:00 p.m. same day of vaccination, she developed rash and hives on left side of arm where injection site was, as well as left side of her face. Immediately following this, she had intermittent chest pains in which she took a BENADRYL 25 mg with some relief. Next day (19Dec2020), progressive headache persisted to a severe headache, severe nausea, persistent chest pains and a BP of 176/126mmhg. Reported to a place for evaluation with persistent severe hypertension and severe headache treated by toradol, compazine, and Benadryl. She was released from the ER with improved blood pressures and reduced headache. The following day Sunday Dec2020, progressive and severe headache occurred with continued severe elevation of BP of 178/130mmHg. Current treatment of losartan 50 mg was increased to 100 mg to attempt control. She was then placed on chlorthalidone/amlodipine. The events resulted in doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care. The outcome of the events mild progressive headache, body aches, chills, fatigue, fever of 100 degree F, rash and hives on left side of arm where injection site was, as well as left side of face, intermittent chest pains, severe nausea, and BP of 176/126mmhg/persistent severe hypertension/continued severe elevation of BP of 178/130mmHg was not recovered (reported as symptoms persist). The patient was not diagnosed with Covid 19 prior to vaccination and she had not been tested since vaccination. Information on the lot/batch number has been requested.; Sender's Comments: Based on the compatible time association, the hypertension aggravated is possibly related to bnt162b2 administration. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	Gestational hypertension (Gestational Hypertension (2016) that never recovered)	ZOLOFT;
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	913947-1	Patient had dizziness when she got down to the emergency department.; transient ischemia attack (TIA); Hypertensive emergency; This is a spontaneous report from a contactable pharmacist reporting for two patients. This is the second of two reports. A 53-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Lot number: EH9899), intramuscular at 0.3 mL, single in the arm on 23Dec2020 for Covid-19 immunisation. Medical history included hypertension, allergies to sulfa, morphine and cipro. There were no concomitant medications. The patient experienced hypertensive emergency on 23Dec2020 with outcome of unknown, patient was getting her blood pressure checked and the patient was in the 170s systolic on an unspecified date with outcome of unknown, patient had dizziness when she got down to the emergency department on an unspecified date with outcome of unknown. The events were described as follows: Patient was getting her blood pressure checked and the patient was in the 170s systolic. She was taken down to the emergency department. She had a blood pressure of 191/105 in the emergency department. Patient had dizziness when she got down to the emergency department. She does not have further details to provide since the patient is being worked up right now to see if she experienced a transient ischemia attack (TIA). Patient has a history of hypertension. The vaccine was administered at Hospital Facility. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine.; Sender's Comments: While the patient is a known hypertensive and events may be intercurrent events, the causal relationship between BNT162B2 and the events hypertensive emergency, dizziness and transient ischaemic attack cannot be completely excluded due to temporal association. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate..Linked Report(s) : US-PFIZER INC-2020510735 Same reporter/different patient/similar events	No current illness for this event. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	914179-1	<p>lips were tingly and swollen; lips were tingly and swollen; fatigued; allergic reaction; passed out; breathing fast; her brain felt like a rock, like she was there but not there; head was so heavy,wouldn't open her eyes; her throat started to tighten up; chest pain; nauseous; headache; felt a little lightheaded, a little wobbly; palpitations; sweaty; This is a spontaneous report from a contactable consumer (patient) via Pfizer Sponsored Program. A 48-year-old female patient (no pregnant at the time of vaccination) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899) via an unspecified route of administrationon 22Dec2020 on left shoulder at single dose for COVID-19 immunization. The patient's medical history included pernicious anemia and She had problems with B12 and Vitamin D like 10 years ago, she had none in her body, everyone said she was deficient and this year with her new primary care, they sent her to do some antibody tests, and found out she has pernicious anemia, allergy to MRI and CT contrast. MRI and CT contrast NDC, lot, expiry unknown. Her CT contrast allergy happened when she was 9 and 12 years old. It turns out to be her dad has an allergy the same way, his airways close. Whenever she needs a CT, they do without contrast, if she does need, they prep and give her Benadryl and keep an eye on her. This only happened once, that she needed with contrast, and with prep she was ok. With the MRI, this happened 4 or more years ago, maybe like 5 years ago. She needed an MRI, they said she would be fine, they injected contrast, she felt pretty hot, then she doesn't know, 20 minutes into it, she couldn't handle her gown, she looked at her chest, her whole chest was red like a burn. They gave her the IV Benadryl, she guesses, and it went away, now she knows, she doesn't know if her dad is allergic to MRI dye, but she knows she got the allergy from him for the CT contrast. The concomitant drugs was not reported. The patient was taken to ER with a severe allergic reaction. She had an allergic reaction on 22Dec2020: she passed out, said her brain felt like a rock, like she was there but not there, she then received an Epi Pen shot, when she got to the ER, her throat started to tighten up, lips were tingly and swollen, she was breathing fast, she had chest pain, she scaled it from a scale of 1-10, as about a 3 to 4 for chest pain, she felt nauseous, sweaty, and had a headache. She went to bed last night, and woke up, feeling better but a little fatigued on 23Dec2020. She is wondering if she should take the second dose, and wants to be in the clinical trial for this type of reaction. She needs transfer to Regulatory Authority. Caller confirmed details. Caller states she works in a hospital, and all this happened at the hospital, and her doctor was not involved. Outcome of allergic reaction: asks what does lasting effects mean? Right now she has a little fatigue and headache, but she knows they are regular symptoms she can have with the vaccine, are those lasting effects? She was discharged from the ER to home. She mentioned to the nurse she has, she went to get the shot, she told the registration nurse, she said she has a severe allergic reaction to CT contrast, her airway closes and she has a severe reaction to MRI contrast, her skin burns, it turns red and feels like a horrible burn, she cannot handle anything to contact her skin, it burns, and she mentioned that to the nurse, she said, instead of staying 15 minutes, said to stay 30 minutes there to observe just in case. She got the vaccine, and 10 minutes after the vaccine, she felt a little lightheaded, a little wobbly, but she didn't think much, it was mild, and on the mark at 30 minutes, the nurse asked her to stand, and that is when she started feeling, like her head was so heavy, the only way to describe, was like her brain was like a rock, she had to lay down, and when they laid her down, she wasn't there, she was there but wasn't, and they didn't wait at all to give her the Epi Pen, she had a feeling of heaviness that got worse, she wouldn't open her eyes, she was able to answer questions, but it was not her there, it was weird, then she didn't have. she breathed fast, had palpitations, chest pain, so they called a Rapid Response team, they were keeping an eye on her breathing, which was super fast, and they rushed her to the ED, and the doctor did what they were doing, giving her IV of whatever medication, and she was also very nauseous, then at one point in the ED, she started feeling, like imagine if fists were on throat, pushing her throat, a little bit, and she tried to tell to the ED doctor, but guessed she was calling everyone to give her things, and didn't catch it, but it didn't last long, at the same time, she started to feel her lips tingly, so she thinks that, because they gave the Epi Pen so quickly, they wasted no time, she didn't have the airways closing like she does when she gets the CT contrast, they were quick. NDC/lot/expiry: She reads from the card they gave her: states first dose COVID-19 EH9899, states it doesn't specify lot, but she can find that out, they just gave her a vaccine record card. EPI Pen: NDC, lot, expiry unknown, states everything happened so quickly, she didn't think to get this information before calling, but she can get it. There at the hospital, she went to see the occupational health doctor, and based on guidelines from the CDC, he read supposedly she cannot get the second dose, but the doctor said because it is so new, and she has to wait the 3 weeks she guesses, things can change, and she wanted to be proactive. The outcome of the events, allergic reaction, passed out, throat started to tighten up, lips were tingly and swollen, chest pain, nauseous, headache, lightheaded, palpitations, sweaty was recovering. The outcome of other events was unknown.</p>	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	914517-1	I developed severe abdominal pain and was diagnosed with colitis. I was seen in ER. I have no idea if the vaccine called this.	No	Yes

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	918742-1	Allergic reaction; Diarrhea; Chills; Palpitation; Tongue and throat swelling; Tongue and throat swelling; This is a spontaneous report from a contactable other healthcare professional (patient). A 38-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: ELO141), via an unspecified route of administration on 21Dec2020 at a single dose for covid-19 immunization. The patient's medical history included asthma and allergy. Concomitant medication included levosalbutamol hydrochloride (XOPENEX) for asthma and cetirizine hydrochloride (ZYRTEC) for allergy. About hour and a half to two hours after the vaccine, on 21Dec2020, the patient experienced had an allergic reaction with symptoms set of diarrhea, chills, palpitations, and tongue and throat swelling. The patient took diphenhydramine (BENADRYL) 25 mg as treatment. It helped some. She woke up this morning (22Dec2020) and still had the symptoms. So, she went to the emergency room. They gave her diphenhydramine 25 mg IV, methylprednisolone (SOLUMEDROL), and famotidine (PEPCID). The patient underwent lab tests and procedures which included blood count and chemistry and lab work which showed normal on 22Dec2020. Outcome of the events was unknown. The patient thinks that the product had causality to the events. Information on the lot/batch number has been requested.; Sender's Comments: The patient's medical history included asthma and allergy. Based on information available, the reported allergic reaction with symptoms set of diarrhea, chills, palpitations, and tongue and throat swelling was likely related to the use of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), due to temporal relationship and clinical course. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	XOPENEX; ZYRTEC [CETIRIZINE HYDROCHLORIDE]
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	918745-1	General weakness requiring assistance to stand.; General weakness requiring assistance to stand; Rash on chest/neck. This is a spontaneous report from a contactable Pharmacist. A 33-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number EK5730), intramuscularly on 22Dec2020 13:15 at single dose for covid-19 immunization. Vaccine location was right arm and it was the first dose. The facility type vaccine was hospital. None medical history. No known allergies. Patient was not diagnosed with COVID-19 prior to vaccination nor tested for COVID-19 since the vaccination. There were no concomitant medications. The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine nor received any other medications within 2 weeks of vaccination. The patient experienced rash on chest/neck. General weakness requiring assistance to stand on 22Dec2020 17:00 with outcome of recovered in Dec2020. The date report was first received from source was 23Dec2020. Patient received Fluid bolus, IV benadryl, IV steroid as treatment for the adverse events. The action taken in response to the events for BNT162B2 was not applicable. The events were reported as non-serious.; Sender's Comments: The reported events rash on chest/neck and general weakness requiring assistance to stand were likely related to the use of first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), due to temporal relationship and clinical course. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	918747-1	<p>Flushing; she noticed that there was a ringing in her left ear; Experienced a weird heaviness on her upper chest and arms/ heavy legs and arms/really heavy arms and legs; experienced a weird heaviness on her upper chest and arms; really cold hands; felt really hot at the injection site/really hot sensation at injection site; lightheadedness/Light-headed; Palpitations; Feeling faint; shortness of breath. Her blood pressure went up to 134/100; paleness; went up to her face; felt tired/She was really tired and slept it off; This is a spontaneous report from a contactable nurse, who is also the patient. This 34-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number EK5730) intramuscular in the left deltoid on 20Dec2020 at single dose for COVID-19 immunisation. Relevant medical history included ongoing asthma (diagnosed as a teenager with sports asthma and uses an inhaler). There were no concomitant medications. The patient experienced lightheadedness/light-headed (medically significant) on 20Dec2020 with outcome of recovering, palpitations (medically significant) on 20Dec2020 with outcome of recovered on 20Dec2020, feeling faint (medically significant) on 20Dec2020 with outcome of recovered on 22Dec2020, flushing (medically significant) on 21Dec2020 with outcome of recovered on 22Dec2020, she noticed that there was a ringing in her left ear (medically significant) on 21Dec2020 with outcome of recovering, shortness of breath (medically significant) on 20Dec2020 with outcome of recovering, her blood pressure went up to 134/100 (non-serious) on 20Dec2020 with outcome of recovered on 20Dec2020, she experienced a weird heaviness on her upper chest and arms (non-serious) on 21Dec2020 with outcome of recovering, really cold hands (non-serious) on 21Dec2020 with outcome of not recovered, paleness (non-serious) in Dec2020 with outcome of unknown, felt really hot at the injection site/really hot sensation at injection site (non-serious) on 21Dec2020 with outcome of recovered on 23Dec2020, went up to her face (feeling hot) (non-serious) in Dec2020 with outcome of unknown, heavy legs and arms/really heavy arms and legs (non-serious) on 21Dec2020 with outcome of not recovered and felt tired/she was really tired and slept it off (non-serious) in Dec2020 with outcome of unknown. The patient specified that she experienced a moderate reaction after having the COVID-19 vaccine. She had the vaccine last Sunday morning 20Dec2020. She was told to wait 20 minutes before leaving. In the waiting area, she felt lightheaded, had palpitations and was feeling faint. After 20 minutes she started feeling better. Then she started to have more intense light headedness. She went to the ER and was given oxygen. Her blood pressure was 134/100 on 20Dec2020. She had an EKG on 20Dec2020 that was normal. They gave her steroids and Benadryl. She had another episode while being injected with the steroids. On Monday 21Dec2020, she experienced a weird heaviness of her upper chest and arm. She had really cold hands and flushing. On Monday night 21Dec2020 she went to work. She experienced a really hot sensation to the injection site that went to her neck and face. Her left ear was ringing. This lasted until Tuesday 22Dec2020. She took Benadryl again on Tuesday 22Dec2020. She had shortness of breath which started on 20Dec2020 and on 22Dec2020 she had shortness of breath that lasted until 11am. She had really heavy legs and arms and went back to the ER. She had a chest X-ray and D-dimer on 22Dec2020 that were normal per the ER. The night before the report, she had some of the same symptoms. She was really tired and slept it off. She didn't take anything. The morning of the report, she was feeling good and better. She still has heavy feeling on upper chest and arms. Caller clarifies that she did not have a heavy feeling in her legs. Her arms feel heavy if she holds her phone too long. She continues to have ringing in her ear. The flushing went up to her face. The patient specified that she developed sports asthma as a child and uses an inhaler. She gets short of breath if she overexerts herself. Additional laboratory investigations on 20Dec2020 included blood work with unknown results and Troponin which was normal. She was provided with a general steroid. She did not know the name of it. She was also given Benadryl and monitored on telemetry. She was given IV fluids again on 22Dec2020.; Sender's Comments: Based on the compatible temporal association and the known pattern of response, the Company considers the reported events are possibly related to vaccination with BNT162B2. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p>	Asthma (Diagnosed as a teenager with sports asthma and uses an inhaler.)	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	918754-1	<p>woke up with partial right sided facial paralysis/went to the ER to r/o a stroke and was confirmed to be Bell's Palsy/complete right sided facial paralysis; woke up with right sided jaw pain that lasted all day; This is a spontaneous report from a contactable Nurse reporting for herself. A 43-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Lot number 4k5730, via an unspecified route of administration on 18Dec2020 12:15 at Hospital at the Right arm at single dose for COVID-19 immunisation. Medical history included Allergies to Chemical Sunscreen from an unknown date. Concomitant medication included Daily Multivitamin which was received within 2 weeks of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient had no COVID prior vaccination. The patient did not have COVID tested post vaccination. The patient woke up with right sided jaw pain on 22Dec2020 07:00 AM that lasted all day. 23Dec2020 she woke up with partial right sided facial paralysis. The patient went to the ER (Emergency Room) to r/o (rule out) a stroke and was confirmed to be Bell's Palsy. 24Dec2020 she woke up with complete right sided facial paralysis. The events resulted in Emergency room. The patient underwent lab tests and procedures which included CT (computerised tomogram) scan: unknown results in Dec2020. Therapeutic measures were taken as a result of the events and included RX (prescription) medication, OTC (Over-the-counter) pain meds. The outcome of the events was not recovered.; Sender's Comments: Based on the time association, the possible contribution of suspect BNT162B2 to the event facial paralysis cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p>	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	918755-1	<p>patient began to experience dizziness/shakiness.; patient began to experience dizziness/shakiness.; This is a spontaneous report from a non-contactable other hcp reporting for a patient. A 58-year-old female patient received first dose of BNT162B2 (Pfizer product, lot number: EH9899), intramuscular on 21Dec2020 16:00 at single dose on left arm for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. It was reported that during her 15 minute waiting period after the injection (21Dec2020 16:15), the patient began to experience dizziness/shakiness. This provider was notified of patient reaction and she was then transferred to the emergency bay via wheelchair where she was assessed. Monitored patient for severe reaction symptoms, including rapid progression of symptoms, respiratory distress with dyspnea, increased work of breathing, persistent cough and cyanosis, vomiting, hypotension, dysrhythmia, chest pain and collapse. Treatment included no therapy, but did continue with vital checks at approximately 5 minute intervals. Patient discharge: stable to go home and follow up with PCP. The outcome of the events was unknown. No follow-up attempts are possible. No further information is expected; Sender's Comments: Based on the compatible time association, the dizziness and shakiness are possibly related to suspect BNT162B2 administration. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p>	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	918761-1	<p>Cellulitis: below left elbow; Soft tissue swelling; This is a spontaneous report from a contactable nurse (patient). A 63-year-old female patient (62 years old at time of vaccination) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number: EH9899), intramuscular in left upper arm on 21Dec2020 13:00 at a single dose for COVID-19 immunization administered in the hospital. Medical history included ongoing hypertension and cervical cancer from 2015 and ongoing. The patient has been taking unspecified concomitant medication/s. The patient previously took amoxicillin and had allergies and nausea. On 24Dec2020 16:00, patient had cellulitis below left elbow and soft tissue swelling. On 25Dec2020, patient went to ER and X-ray was taken and patient was prescribed Keflex 500mg 3x day. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The outcome of the events was recovering.; Sender's Comments: Based on the information currently provided, the vaccination with BNT162B2 might play a contributory role in triggering the onset of cellulitis. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p>	Cervical cancer; Hypertension	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	918767-1	Severe rash; This is a spontaneous report from a contactable healthcare professional (patient). A 42-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: EK5730 (pending clarification)), intramuscularly at the left arm on 21Dec2020 at 16:00 (04:00 PM) at single dose for COVID-19 immunization. The patient was vaccinated at a hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not pregnant at the time of vaccination. The patient's medical history included Diabetic, type 1, allergies to penicillin, and the patient diagnosed with COVID-19 prior to vaccination. The patient was not tested for COVID-19 since the vaccination. The patient previously took codeine and experienced allergies. The patient received other unspecified medications within 2 weeks of vaccination. The patient experienced severe rash on 23Dec2020 at 21:30 (09:30 PM). The adverse event resulted in emergency room/department or urgent care: the patient was treated at local ER with prednisone and benadryl. The event was reported as non-serious. The patient recovered from the severe rash on an unspecified date in Dec2020.; Sender's Comments: Based on the information currently provided, the vaccination with BNT162B2 might play a contributory role in triggering the onset of severe rash. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	918781-1	intermittent tingling in her right arm; lymph node swelling on the ride side of her neck; right sided Bell's Palsy to her face. This is a spontaneous report from a contactable physician. A 44-year-old female patient received single dose of BNT162B2 (Solution for injection, lot number: EJ1685, Expiry Date: Mar2021), via an unspecified route of administration on 18Dec2020 for immunization. The vaccine was given roughly around 4:30PM at the left arm. Vaccination Facility Type: Hospital. Vaccine was not administered at military facility. Medical history included underlying condition of Lymphoma. It was treated in 2017 and she has been off all medications since 2018. Patient had no relevant family medical history. There were no concomitant medications. The patient had no medications in over 2 years. The patient had no prior vaccinations (within 4 weeks). The patient had right sided Bell's Palsy on an unspecified date in Dec2020 (Either Sunday or Monday, so either the 20th or 21st) wherein she got pain in the right ear. She thought she had an ear infection. She treated herself with antibiotics. 7 days later, she noticed weakness. On day 8, which would have been 26Dec2020, she had complete paralysis. It was ongoing. It was stable, but hard to tell. Patient went to the ER on 26Dec2020 for facial droop. She went to Physician office at Urgent Care on 25Dec2020 thinking it was an ear infection. On 23Dec2020 she had lymph node swelling on right side of neck. that was probably after the ear and she didn't worry about it. She thought maybe it was an infection. It started between onset of ear pain and Bell's Palsy. On 26Dec2020, she had intermittent tingling in right arm. She noticed it on the same day as facial paralysis. She doesn't notice any weakness in the arm. Patient had recent blood work (results and date not reported). The patient considered the events as serious: medically significant. The outcome of lymph node swelling on the ride side of her neck was recovering (was also reported to be ongoing at the time of reporting), while the other events was not recovered. The physician considered the events related to the Pfizer product.; Sender's Comments: Based on the temporal relationship, the association between the events facial paralysis, tingling in right arm, and lymph node swelling on right side of her neck with BNT162b2 can not be fully excluded based on the limited information. The medical history of lymphoma might have been contributory to the lymph node swelling as well. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	918786-1	<p>tightness in throat and lump in throat/had a tightness and lump in her throat; tightness in throat and lump in throat/had a tightness and lump in her throat; allergic reaction like rash, tightness in throat, and lump in throat; allergic reaction like rash/red rash on her chest and rash was on her arms too; cheeks were flushed; This is a spontaneous report from a contactable nurse (patient). This nurse reported similar events for 3 patients. This is the first of 3 reports. A 23-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: EK9231, intramuscular in the right deltoid, first dose on 27Dec2020 14:15 at a single dose for covid-19 prevention. Medical history included ongoing asthma and reactive airway which she was diagnosed when she was like 5 years old (2002). Concomitant medication included albuterol [salbutamol] for asthma which started when she was 8 years old or so. The patient wanted to know if she can receive the second dose of covid vaccine after experiencing symptoms of allergic reaction like rash, tightness in throat, and lump in throat. She wanted to know the ingredients and specific proteins in the covid vaccine. The patient received the COVID Vaccine and she developed a reaction. On 27Dec2020, she had a red rash on her chest, and her cheeks were flushed, and the rash was on her arms too, and she had a tightness and lump in her throat, it was not painful to swallow but she could feel the pressure with swallowing. She stated that she did not experience shortness of breath, but regardless, she was seen in the ER and she was given IV SOLUMEDROL, and BENADRYL, and she was watched for 5 or 6 hours and then she was sent home with an Epi Pen, around the clock Benadryl, and prednisone. She asked the ER doctors if they thought it was okay for her to receive the second dose of the product, and they told her to contact employee health for that question. She mentioned that she contacted that employee health and was told to contact her primary care provide which she did. Her primary care doctor instructed the caller to call Pfizer and gather some more information regarding ingredients, as the she may have had the reaction to a particular protein filler. She was also wondering if this is a known reaction to the product. She received the vaccine on 27Dec2020 at 2:15 PM. She reported that the red rash on her chest and arms, and her cheeks being flushed, resolved yesterday after receiving IV BENADRYL. Had a tightness and lump in her throat which was still ongoing, and it was kind of off and on and when the she takes Benadryl it goes away. She reported that this one is medically significant because even though she did not have shortness of breath, it could have affected her airway. She confirmed that she received no other vaccines on the same day as the COVID vaccine. The outcome of the events 'had a tightness and lump in her throat', allergic reaction was not recovered (a s reported); while recovered on 27Dec2020 for allergic reaction like rash/red rash on her chest and rash was on her arms too and cheeks were flushed.; Sender's Comments: Based on temporal association, the causal relationship between bnt162b2 and the events throat tightness, sensation of foreign body, allergy to vaccine, rash erythematous and flushing cannot be excluded. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.,Linked Report(s) : US-PFIZER INC-2020517134 different patient, same drug and same event;US-PFIZER INC-2020517133 different patient, same drug and same event.</p>	Asthma; Reactive airways disease	ALBUTEROL [SALBUTAMOL]
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	918788-1	<p>High blood pressure 187/95; Heart rate at one time 210 bpm; chest pain; Shortness of breath; This is a spontaneous report from a contactable pharmacist (patient) reported for herself that a 45-years-old female patient received first dose of BNT162B2 (lot number: EH9899), via intramuscular in left arm on 22Dec2020 07:00 AM at single dose for COVID-19 immunization. The patient was not pregnant. No known allergies. No allergies to medications, food, or other products. No other vaccine was received within 4 weeks prior to the COVID vaccine. No other medications were received within 2 weeks of vaccination. The patient was not diagnosed with COVID-19 prior vaccination and patient was not tested for COVID-19 since the vaccination. There were no medical history or concomitant medications. The patient experienced high blood pressure 187/95, heart rate at one time 210 bpm, shortness of breath and chest pain on 23Dec2020 10:00 AM. The events resulted in doctor or other healthcare professional office/clinic visit, emergency room/departement or urgent care. Treatment was received for heart rate at one time 210 bpm which included lab works and medication given propranolol to decrease heart rate. The outcome of the event was recovering.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the events hypertension, heart rate increased, chest pain and dyspnoea cannot be excluded. The information available in this report is limited and this case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.</p>	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID-19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	918791-1	30 minutes after receiving vaccine, patient reported heart racing, dizziness, flushing, burning pain in her chest, dizziness. tachycardia, nausea and throat tightness; 30 minutes after receiving vaccine, patient reported heart racing, dizziness, flushing, burning pain in her chest, dizziness. tachycardia, nausea and throat tightness; 30 minutes after receiving vaccine, patient reported heart racing, dizziness, flushing, burning pain in her chest, dizziness. tachycardia, nausea and throat tightness; 30 minutes after receiving vaccine, patient reported heart racing, dizziness, flushing, burning pain in her chest, dizziness. tachycardia, nausea and throat tightness; 30 minutes after receiving vaccine, patient reported heart racing, dizziness, flushing, burning pain in her chest, dizziness. tachycardia, nausea and throat tightness; This is a spontaneous report from a contactable pharmacist. A 58-year-old non-pregnant female patient received first dose of BNT162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number= EH899), intramuscular on 19Dec2020 07:00 at SINGLE DOSE at Left arm for covid-19 immunization. Medical history included breast cancer female and allergies to shell fish and Latex. The patient's concomitant medications were not reported. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. 30 minutes after receiving vaccine on 19Dec2020 07:30 am, patient reported heart racing, dizziness, flushing, burning pain in her chest, dizziness. tachycardia, nausea and throat tightness. Patient was taken to the ED where she received IV Benadryl and was observed for 4 hours. Patient was discharged home and symptoms subsided. The events resulted in emergency room/department or urgent care. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient was not been tested for COVID-19. Outcome of the events was recovered in Dec2020.; Sender's Comments: There is a plausible temporal relationship between immunization and onset of allergic reaction in a subject with a positive medical history for allergy to food (shellfish); causality cannot be completely excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID-19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	918791-1	Heart rate high; Blood pressure high; bruise at the site of the vaccination; This is a spontaneous report from a contactable other health professional reporting for herself. A female patient of an unspecified age received the 1st dose of bnt162b2 (BNT162B2, Manufacturer Pfizer-BioNTech), via an unspecified route of administration, on 22Dec2020, at single dose, for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. On 22Dec2020, 1-1.5 hours after vaccination, the patient experienced heart rate high with outcome of unknown , blood pressure high with outcome of unknown and bruise at the site of the vaccination with outcome of unknown. The patient underwent lab tests and procedures which included: blood pressure, high (22Dec2020); heart rate, high (22Dec2020). She returned to the emergency room (ER) of the hospital where she received the vaccine due to all the events. Therapeutic measures were taken as a result of heart rate high and blood pressure high and included treatment with a beta blocker. The patient was also prescribed with a blood pressure medicine from the ER physician. The events heart rate high and blood pressure high were considered medically significant. The information on the lot/batch number has been requested. ; Sender's Comments: Based on the compatible temporal association, the Company considers the events heart rate high and blood pressure high are possibly related to vaccination with BNT162B2. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID-19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	920018-1	hypersensitivity reaction to COVID-19 Vaccine; throat pain that progressed to a little bit of tightness; ear pain; wheals develop on her back bilaterally; This is a spontaneous report from a contactable pharmacist. A female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EJ1685 and Expiry date: 31Mar2021, strength: 0.3ml) (NDC number: 59267-1000-2) via Intramuscular on 21Dec2020 12:21PM at 0.3ml single dose for COVID-19 immunization. The patient's medical history and concomitant drug was reported as none. The patient experienced a hypersensitivity reaction to COVID-19 Vaccine late last night on 21Dec2020. Hypersensitivity reaction: Further described as patient developed throat pain that progressed to a little bit of tightness; some ear pain; and had wheals develop on her back bilaterally. She was transported to the emergency room on 21Dec2020 where she received treatment and was under observation. The outcome of events was unknown. Since whether outcome recovered completely, recovered with lasting effects or just improved is unknown. She was not admitted to the hospital; she was sent home from the emergency room after 2.5 hours. Caller reported seriousness criteria as medically significant because event required medical intervention. Causality was very likely. Patient at time of this report is scheduled to receive the second dose of vaccine; they have not determined if she will receive the second scheduled dose or change/stop dose in response to this event. First dose; scheduled to receive a second dose; have not determined if will be continuing with it.; Sender's Comments: Based on the compatible time association, the hypersensitivity reactions are reasonably related to suspect BNT162B2 administration.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	920157-1	meningitis; headache; fever; weakness; rash; This is a spontaneous report from a contactable consumer (patient). A male patient of an unspecified age received bnt162b2 (lot/batch number and expiration date not provided), via an unspecified route of administration, on 16Dec2020, at single dose, for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient received the Pfizer-BioNTech COVID-19 Vaccine on 16Dec2020, he experienced headache, fever, weakness and rash; went to the ER and after testing blood work and suspecting of meningitis. They did a spinal tap. Test came out negative for Flu and COVID; was told the rash could be due to a drug reaction and they attributed side effects to a generic bactrim, so he stopped taking all medications. If he continues to have issues the primary concern is whether he should get the second dose of the COVID-19 vaccine or not. The outcome of the events were unknown. Information on the lot/batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	920965-1	"tested positive for COVID-19; headache; cough; voice being hoarse; Drug ineffective; This is a spontaneous report from a Pfizer Sponsored Program Pfizer First Connect from a Contactable nurse reporting for herself. A 58-years-old female patient received bnt162b2 (BNT162B2; Lot # EK5730) vaccine , via an unspecified route of administration on 18Dec2020 10:30 at single dose for covid-19 immunisation . Medical history included hypertension from an unknown date and blood cholesterol increased. Concomitant medication included losartan (LOSARTAN), hctz (HCTZ), ezetimibe (ZETIA), famotidine (PEPCID). The patient started having a headache and cough on 25Dec2020 and these symptoms worsened on 26Dec2020 in addition to her voice being hoarse. On 26Dec2020 she went to get tested at an urgent center and tested positive for Covid-19. The outcome of the event was not recovered.; Sender's Comments: The association between the event ""tested positive for COVID-19, headache, cough, and dysphonia"" with BNT162b2 can not be fully excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate."	No current illness for this event.	; HCTZ; ZETIA; PEPCID
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Emergency Room *	921037-1	nauseous; weak; no appetite; numbness on the skin of my arms and legs; I was post lctal for 2+ hours; seizures/having 2 non epileptic seizures; dizzy and lightheaded; This is a spontaneous report from a contactable nurse (patient). A 21-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE. Batch/lot number: EK5730), intramuscularly on 28Dec2020 07:45 AM at right arm, at single dose for covid-19 immunization. Medical history was none. There were no concomitant medications. The patient was not pregnant at the time of vaccination. The patient received vaccine around 7:45 AM. Within 2 minutes she felt extremely dizzy and lightheaded on 28Dec2020. She sat down and drank some Gatorade and took deep breaths. The feelings persisted 5 minutes later. She then woke up after having 2 non epileptic seizures while still in 15m waiting period. (This included posturing and color change) a rapid response was called and she was taken to the ER. She was post lctal for 2+ hours. Dizzy and nauseous, weak and no appetite for the rest of the day. She had no history of epilepsy. She also have numbness on the skin of my arms and legs within 24 hours of the vaccine. Onset date of all events (except dizzy and lightheaded) was reported as 28Dec2020 08:00AM. Treatment fluids, Zofran was received for all events. All event resulted in emergency room. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The outcome of the events was recovered with sequel.; Sender's Comments: A possible contributory effect of suspect BNT162BW on reported seizures cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate. Assisted to the restroom, x 1, no difficulty, after 30 minutes and no relief from symptoms, patient was wheelchaired over to urgent care, and treated there. Patient was able to leave urgent care on her own, with no problems Patient transferred to urgent care for evaluation. Left from urgent care on her own	leg abcess	celebrex bactrim
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	903149-1	1215 pm on 12/16/2020: pfizer covid vac in left arm Poor nights sleep with left arm pain at injection site 500am on 12/17/2020: stood up to get ready and immediately started to dizzy. Then immediately threw up and had darker green diarrhea. Once that finished I had the sweats and felt cold with a subjective fever until around 9 am with continued nausea. Symptoms resolved 11:40 AM.	none	Adderall, spironolactone, vitamin D supplement
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	903163-1	Pt underwent 15 minutes observation and felt fine during that time, while walking back to work on the way to work unit noticed tingling on the L side of her lower lip and a few inches back along jaw. It persisted so she returned to the vaccine clinic for evaluation. She was evaluated by a physician and had a normal cranial nerve and motor exam other than diminished sensation CNS- no change in appearance of lip. There was no other reaction at vaccination site or change in symptoms during a further 30 minute observation period. She was released back to work. Checkin after a few hours the tingling had improved.	None	Singular
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	903182-1	tingling in arm at the time of admin down into fingers which faded over 15 mins and then soreness in arm	none	none
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	903217-1	COVID vaccine administered to patient. She began to have lightheadedness and dizziness. She disclosed she had not yet eaten for the day, except for a glass of milk. Writer brought her to an exam table and had her lay down. After 5-10 minutes, she was given a banana and two small apple juice boxes. She then laid back down. After another 5 minutes, she complained of headache and slight phlegm development in her throat. Dr. was called to evaluate- after an assessment, she asked for a BP. Writer completed the vitals and found her BP was 113/77. 5 more minutes passed. Dr. advised that since her situation was not improving and headache and phlegm appeared to be getting worse, patient should receive epi and go to the hospital. Writer administered 0.3mg/0.3mL of epi and drove patient to the Emergency Department of Hospital. She was there for about two hours before being discharged. Symptoms largely resolved by the evening.	None	Spironolactone 50 mg bid, vitamin d 2000iu
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	903229-1	Patient reports it started as a tingling, pain and burning in the elbow and travelled up the shoulder and up the chest and to the heart. Pain felt like a cardio thump . Grabbed the epi. Sitting forward. Talked Dr. Doctor stated to sit back and uncross legs. Initiated slow breathing. Pain subsided to a tolerable amount. Not short of breath but tachycardic. Still dizzy. Stayed an hour sitting position, after injection. Felt there was an irritating sensation around the heart. Left and walked back to clinic. 10 minutes after arriving to the clinic, dizziness, flushing, came back and irritation around the heart was still noticed but tolerable. 2 minutes after, voice started cracking and drank some water. Intensity of dizziness increased and overall symptoms also intensified. Returned to COVID immunization clinic 15 minutes later. Patient was moved to direct observation in a chair. Given oral benadryl. Instructed to stay and would evaluate if new interventions would be deemed necessary. Benadryl helped. Symptoms were relieved in 15 mins. Patient has been in the clinic under direct observation for about 3.5 hours.	asthma and allergies, environmental	Allegra, ffonase, baby aspirin, multivitamin, gabepetin (300,mg TID),amlodipine, tylenol (arthritis -650mg TID), 50,000IU qweekly, Caltrate every day, albuterol inhaler, Benadryl- for two months.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	904031-1	The day I received the vaccine, 8 hour post injection, I began to have numbness in both hands and it went up my arm on the injection site arm. Almost 24 hours after getting vaccine, I woke up the following morning around 4am to body aches, chills, low grade fever, nausea, numbness in both hands, neck stiffness, and excruciating pain in the arm I received the vaccine in (unable to lift arm). I began taking Tylenol, every 4 hours and zofran for nausea. The symptoms proceeded to get worse. At 3pm the same day I decided to go to the urgent care. I was febrile 101.2, tachycardia, hypertensive, I was tested for the flu- results came back negative.	N/a	Nascobal

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	904217-1	Within 30 minutes of receiving vaccine patient reported feeling light headed, hot and heart palpitations. BP increased to 158/110, Pulse 100. Patient was CRNA working in ICU environment and was monitored by other staff present. Signs and Symptoms resolved over the following hour.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	904227-1	Within 30 minutes of vaccine patient's left pupil was dilated greater than right and reacted sluggishly to light with slight fuzzy vision. No other signs or symptoms. Pt to follow-up with Ophthalmologist next week.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	904236-1	I received the vaccine at 0915, was observed until 0936 and felt fine. While driving home, around 0949, began to feel heart racing/beating fast. I then felt very shaky and proceeded to get off the highway exit as the symptoms continued to worsen My daughter called 911 at 0953 at my request. No throat swelling, respiratory issues, or mouth or lip swelling. No rashes noted. I then began to feel sweaty and then became a little dizzy and proceeded to lean my car seat back. My daughter called 911 again as they instructed her to call if any new symptoms began prior to ambulances arrival. Ambulance crew arrived, I ambulated myself to the ambulance, felt a little lightheaded while walking. The feeling of my heart racing had started to lessen but still not normal at this point. Pulse ox was 98% on RA, no respiratory distress at all. I'm not exactly sure of what my HR was as I couldn't see the monitor but I believe they said around 100, I'm normally in the 60's. Systolic BP's were 138, then 120's, then 101 prior to me leaving ambulance. Finger stick was 140. I was in the ambulance for about 15 minutes and was feeling much better the last 5 minutes or so of that. I declined need to go to ER, my daughter then drove. I then went to a store and while walking around at 1105, began to feel my heart racing again but not as intense. Had slight feeling of being shaky but nothing like previously. After that, I have felt fine for the rest of the day. I took 400mg Ibuprofen for a slight HA around 1130 but not unusual for me, especially since the events that occurred. I called the hospital where I was given the vaccine when I got home and informed one of the employee health MD's who requested I report this here.	None	Atenolol 12.5mg PO qD Spironolactone 100mg PO qD

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	904364-1	I am an employee of Medical Center. I went to Hospital for my vaccine since it was only 5 minutes away from my house. At 5:00 PM I received the vaccine. 10 minutes after I noticed my throat felt tight and as if it was closing. This felt similar to the reaction I felt when I had morphine in Jan 2020 (that I am allergic to). I notified the nurses and they watched me for 10 minutes. I then stayed the same. They brought me back to their tent area and gave me 50 mg of benadryl. I immediately felt relief. However, maybe 3-5 minutes after the throat closing sensation came back. They then had to take me to the ER. I was then put on fluids, steroids, pepcid, and ativan. I was released after they watched me for a couple hours.	None	Oxcarbazepine, quetiapine,levothyroxine, lorazepam

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	904444-1	Received 1st dose of Pfizer vaccine on Left Arm at 1630 on 12/18/20. Within 8 minutes of receiving vaccine, tongue experienced numbness and tingling. At 9 minutes post administration, symptoms intensified. And at 10 minutes post administration throat was scratchy was a tickle. At 12 minutes post administration notified Pharmacy and Employee Health Workers. By approximately 1650, health care professional administered Benadryl 50 mg IM to Right Arm. Observed. Symptoms decreased but then intensified to include numbness and tingling in lips. Transferred to Emergency Department for observation. Received decadron 10 mg IM to Right Arm at 1915 due to symptoms not resolving. Discharged from ED with prednisone course. Discharge diagnosis: Angioedema. Symptoms decreased approximately 6 hours post administration of vaccine. On 12/19/20 at approximately 1425, experienced tightness of throat, with numbness and tingling of tongue and lips. Took over the counter Benadryl 50 mg p.o. at 1440. By 1520, symptoms intensified with hoarseness in voice with coughing spells. Returned to Emergency Department for observation. Noted to have rash on chest in ED. Received Pepcid 20 mg in ED. Discharged with instructions to take Benadryl 50 mg p.o. every 6 hours, famotidine 20 mg p.o twice daily, continue taking prednisone, and received prescription for epinephrine auto injector. Emergency room physician wrote to return to work on 12/22/2020 with follow up with Employee Health on 12/21/2020.	n/a	Immune Defense Vitamins, Quercetin, B12, B100, melatonin, famotidine

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	904543-1	"Immediately after the injection my right shoulder felt ""odd"" and seemed to be popping and clicking more than usual. I experienced severe pain of the shoulder joint about 4 hours after the injection. At this time I took 400 mg of ibuprofen and the pain was eased by about 50 percent after about an hour. The next day I went to work without any medication and could barely lift my arm without severe shoulder pain inside the joint. The muscle did not feel too bad. Mobility of the joint was possible but limited by pain. I mostly used my other arm to adjust the position of my right arm. After work that day I took 800 of ibuprofen and went home to bed. I felt better the next day but took another 600 mg of ibuprofen to get through the work day. Same for day 3. It is now approximately 80 hours since the injection and my shoulder joint is still fairly tender and stiff but improved. I fear possible SIRVA because the shot seems to have been delivered fairly high on my arm. I do have a history of rotator cuff issues with this shoulder but it was never as painful as it was on the day of the vaccine and the shoulder has been well for the last two years. I received the flu vaccine in the same arm a few months ago with no problems."	None	None before vaccination. I took ibuprofen afterwards to alleviate symptoms.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	904881-1	"Staff member stated that she had an allergic reaction ""after the vaccine""...unsure of time frame and was still at work. She has a rash, hives and swelling around eyes....no immediate anaphylaxis. She verbally described her incident. Was treating with Benadryl (even though there was a stated allergy from 2013), then followed up with her family doctor, for steroid therapy on 12/18. She has not communicated with me further or have any absences from work at this time."	none voiced	unsure
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	904974-1	12/15/2020 30 minutes after vaccination, started to taste a metallic taste; lasted 24 hours "like chewing on tin foil". Pain at injection site 48 hours. 12 hours after vaccination, joints hurt, left hip is 'excruciating'. 72 hours later, joint pain dissolved. But the left hip, the pain is awful. Taking motrin, muscle relaxers, physically walking with a limp, cannot bend over, have assistance with sit or stand. Had COVID19 in 05/2020. Same hip pain when had COVID. Went away after 3 months. Hip pain now is 5x's worse than when had COVID; debilitating; constant pain. appt with PCP 12/30/202; xrays, mri, etc. May go to the ER if worsens but Chief Officer Urgent care for COVID19 and cannot take the time away.	N/A	ZOCOR 5MG 1/DAILY

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	905921-1	Vaccine #1 12/19/2020. No immediate reaction. 12/20/2020 started to get burning around Left eye. 12/21/2020 started to get swelling and puffiness around both eyes, also started with cough and back pain. Feels like symptoms improving. Taking Benadryl.	Skin rash to face from wearing surgical mask- 11/17/2020	Vitamin E, Vitamin C, Zyrtec
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	905929-1	Received the vaccine Wednesday evening, after work. Waited the recommended 15 minutes, then went home and went to bed. Woke up Thursday feeling fatigued and had injection site pain, no other side effects or fever. Thursday evening, I developed body aches and a low-grade fever. I took Tylenol and went to bed. Friday, when I woke up around 1pm, I noticed a small rash behind my left knee. I took Benadryl and ended up falling back asleep. When I woke up Friday evening, I had the rash, and hives, and red/white spots all over my legs. I took Benadryl and consulted my doctor. The rash continued to spread to my arms, and stomach. The rash itched and burned. I went to the ER Friday night for it. Before they gave me medication, I started coughing, couldn't breathe for a minute, and got lightheaded. They gave a steroid, Pepcid, Benadryl, and fluids. They observed me for several hours. I felt better then was discharged. They told to continue to take Benadryl or Zyrtec for a couple days. 5 days later, the rash/hives are still red, itchy and present, especially when Benadryl wears off.	Vitamin D Deficient, Iron deficient	none
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	905946-1	Approximately 30 minutes after vaccination developed intense pins and needles sensation to the left side of my face. I then developed a heavy, aching, tingling sensation to the left side of my face. I returned to the facility and was evaluated post vaccination. Symptoms persisted still 2 days later so I was evaluated by my PCP today and diagnosed with Bells Palsy. I was prescribed high dose steroids today.	None	None

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	906428-1	<p>"Patient states that she received the vaccination at 10:24 AM. Patient states approximately 2 minutes after that she felt pain and swelling and erythema in her left arm at the injection site. Patient states she felt like she had a somewhat of a ""apple in her throat"". Patient states that her left arm was tingly. Patient states that she has a headache in the bitemporal area. She states that she has a history of headaches. Patient states that she has no visual changes. Patient states that it started after the immunization. Patient states 5 minutes before I came into the room she vomited and now feels tremendously better. She is talking in a complete sentences. Patient is somewhat tachycardic on initial presentation. Patient presents via BR RT for evaluation. Patient has a host of allergies.Patient is anxious upon presentation, Patient does have a history of anxiety. No other travel or trauma. Patient states that her pain is severe. States that she has some pressure in the bitemporal portion of her head and her left arm injection site. Otherwise nonradiating. No other known aggravating, triggering or alleviating factors. Patient dates its concurrent with the injection time. Otherwise nonradiating. BP 180/100 at 1045, O2 sat 98%, ECG sinus tachycardia Repeat Vital Signs BP 133/82 Pulse 82 Temp 36.9 °C (98.4 °F) (Oral) Resp 16 Ht 1.702 m (5' 7") Wt 197 lb 1.5 oz (89.4 kg) SpO2 98% BMI 30.87 kg/m²; Constitutional: Well developed; well nourished; in no apparent distress; non-toxic appearance HEAD: Atraumatic. Normocephalic. Eyes: PERRL; EOM intact; conjunctiva and sclera normal to inspection. HEENT: TMs normal; no rhinorrhea; normal pharynx with no erythema or exudates. Mucous membranes are moist. Uvula is midline. No hemotympanum or foreign body. NECK: Supple; non-tender; no cervical lymphadenopathy. Respiratory: No respiratory distress; normal breath sounds; breathing non-labored Cardiovascular: Normal rate; good peripheral perfusion. No murmurs or rubs CHEST: Nontender. There are no retractions. GI: Normal bowel sounds; non-distended; non-tender to palpation; no palpable organomegaly GU: Musculoskeletal: Extremities non-tender; normal range of motion; no edema; Normal distal pulses Back -Normal tone; no tenderness Integument: Well hydrated; no lesions; no significant rash or palpable nodes. Neurologic: Alert, appropriate; oriented to person; place and time. No focal deficits. Motor 5/5. Sensation intact in all 4 extremities. Psych: Mood and affect are anxious. Mental status appears normal at time of exam. Patient upon presentation is anxious. Patient did vomit x1. Patient was talking in complete sentences upon my evaluation. Patient feels that she has some discomfort to her injection site with a headache. They feel no warmth or erythema. Patient was given Tylenol for the headache which did improve. Also received ondansetron, diphenhydramine, famotidine, methylprednisolone, NS 1000mL. Patient was monitored for an extended period of time and has had no return of symptoms. I am uncertain whether this is a true allergic reaction since the symptoms started approximately 2 minutes from the time of the injection. Patient does have a history of anxiety and this may have played a role within the symptomatology. At this time patient feels much better. Patient be dismissed we will send the patient home with a prednisone taper. She can take oral Benadryl and Peppid. Follow-up with her family doctor next couple days not feeling better. Patient is dismissed. Patient returned to ED on 10/22/20 0100. Presents to ED complaining of numbness and tingling all the way from her head to her left toe on the left side. Has taken Benadryl 3 times today. She states that she woke up this evening with her heart racing. She still has a little bit of a headache. No fevers. He was nauseous. Again she says the whole left side of her body is tingling. All other systems negative/without deficit. HR 124, BP 168/107. Repeat Vital Signs: BP 129/77 Pulse 99 Temp 37.2 °C (98.9 °F) (Temporal) Resp 20 Wt 206 lb 2.1 oz (93.5 kg) SpO2 100% BMI 32.28 kg/m²; EKG showed a sinus rhythm without acute ST changes. She is anemic but she has a history of that and her hemoglobin is not significantly lower than usual. Sed rate is little bit elevated but her C-reactive protein is normal. Her glucose slightly elevated at 173 but the rest of her labs are normal. CT and CTA of her head and neck were normal. I do not know at this time if this is a reaction we will have her continue the prednisone taper she was started on earlier as well as Benadryl and have her follow-up with her primary care physician."</p>	anxiety, hx gallstones, depression, fatigue, gastritis, Additional PMH: hypothyroidism, second trimester bleeding	cyclobenzaprine, fluoxetine, ibuprofen, omeprazole

Approximately 10 minutes after vaccination employee had an allergic reaction and developed Hives all over her body and became itchy with hot flashes. Employee was given 50MG of Benadryl which was effective.	Employee stated yes on consent form MTHFR-Heterozygous for C677+	Not Known
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	906610-1	Pfizer-BioNTech COVID-19 Vaccine EUA Headache, body aches and extreme fatigue started on 12/20/2020. I had a doctor appointment on 12/22/20 for a routine visit and I told my doctor about these symptoms that had occurred and he stated that I needed to be tested for COVID since these were symptoms. He also ordered blood work and I had blood drawn. I had informed him at the beginning of the visit of my recent COVID vaccine last week.	hypothyroidism	lisinopril, levothyroxine, vitamin D, Wellbutrin,Pristiq, Adderall, meloxicam, one a day gummy vitamin, ibuprofen over the counter
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	906639-1	Throat numbness; Lymph node swelling; Felt flush; This is a spontaneous report from a non-contactable consumer. A 28-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EK5730), via an unspecified route of administration in the right arm, on 17Dec2020 at 15:15 (at the age of 28-years-old) at a single dose for COVID-19 immunization. The patient had no medical history or concomitant medications. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient had no known allergies to medications, food, or other products. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient experienced throat numbness, lymph node swelling, and felt flush on 17Dec2020 at 15:15. The events were reported as non-serious. Therapeutic measures were taken as a result of the events, which included treatment with diphenhydramine hydrochloride (BENADRYL). The clinical outcome of throat numbness, lymph node swelling, and felt flush was recovering. It was also reported that since the vaccination, the patient had not been tested for COVID-19. No follow-up attempts are possible. No further information expected.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	906717-1	Urticaria, tachycardia at 10 minutes post injection in left arm and neck Treated with oral cetirizine and montelukast. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	907011-1	1406, Monitored pt 1:1. She reported feeling fine for the first 15 minutes then reported itching involving her face but not forehead. Gave 25 mg IM diphenhydramine. pulse ox Reading was wnl. Within 5-10 min after diphenhydramine pt reported itching involving her arms, facial flushing but no shortness of breath. extra 25mg diphenhydramine IM given and Epinephrine IM administered. medical director notified. Dr. came and assessed and monitored patient. Symptoms resolved while on site. Pt escorted by medical colleagues to workplace ER where she agreed to stay for further monitoring. Dr followed up with pt later in the evening and she was doing. Patient updated progress December 20, 2020. I have had continued symptoms since Thursday though initially I felt that they were just typical post-reaction type symptoms. Thursday night I just had some itching and occasional hives. Friday I woke with a terrible headache and could not lift my left arm above my head due to pain but figured that these were vaccine effects. I had intermittent hives and itching that I was able to suppress by taking Allegra, Zyrtec and Claritin (each once) throughout the day. I was also taking Pepcid at night. Saturday, I tried to decrease my antihistamines to just Allegra BID, Pepcid once and Benadryl just last night. I woke with hives and worse itching again. I also appeared to have what looked like eczema on my hands that was new. So I took Pepcid and Allegra prior to going into my shift this morning. I took Zyrtec around 9 am as I had not yet had any improvement in my hives or itching. My co-attending noted that I was progressively becoming more flushed and around 11 am I started to experience an odd sensation in my throat with a persistent cough. My vitals were normal (HR 75, sat 98%, BP 113/78), so I talked the other attending out of more epinephrine and she prescribed me dexamethasone 16mg. I took the dex plus a Claritin at noon today and by 2 pm, had resolution of all of these symptoms. I also noted that my chest felt significantly less tight and retrospectively think I have been experiencing chest tightness and pressure since Friday but hadn't realized it because it occurred gradually. As of December 21, 2020, patient was to start prednisone 40 mg daily x 5 days.	Unknown	Unknown
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	907037-1	After injection had L arm pain, the following day (12/17) pain continued . 12/18 onset of fever max temp 38, chills, fatigue, muscle pain and nausea. Treated with Tylenol for symptom relief. Symptoms continue and worsened 12/19 and 12/20. 12/20 underwent video clinician visit for symptoms and inability to return to work for continued symptoms 4 days after vaccination, last day of fever. 12/21 covid and flu swab negative symptoms all continued fatigue very evident going to and from swab exam. 12/22 morning near syncope while getting ready for day, tachycardia, underwent ED eval was given fluids and labs drawn and discharged home with improvement in tachycardia and lightheaded/dizziness with fluids, another covid swab was negative along with negative RVP. Continued to have fatigue 12/22 evening.	n/a	n/a

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	907581-1	Yesterday afternoon, she developed a loss of taste and smell. This morning around 0400, she awoke to a splitting headache. She took some Advil and tried to go back to sleep, hoping she could maybe come in to work today a little later. Around 1030 this morning, she began to have significant swelling to her face and eyes along with her skin becoming flushed. She has taken some Benadryl and been instructed to follow up with her PCP	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	907582-1	I received the vaccine at 1:40 PM in my left arm. They had me wait 15 minutes for observation. 15 minutes later, I left feeling fine. I went back to work. Around 2:15 I started getting chills. I ignored it thinking that I was psyching myself into it thinking about the shot. But then the nausea began. I was at work and started feeling horrible. I started cramping in my stomach. I was alone at work, and then I started throwing up. It started at 3:40. I left work at 4:30 with the most body wracking chills and went to the emergency room. I was violently heaving at this point and they rushed me into a room where I received an IV drip of fluids and anti nausea medication. It wasn't until after the medication was administered that I felt better. I would say this was around 5 pm. They sent me home with an anti nausea medication. I was released to go home around 730-8 PM. I felt so much better after the medication was administered.	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	907586-1	2 hours after the vaccine felt like she was hit by a bus. Had facial droopiness. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	907653-1	last night legs began burning like she had rubbed icy hot on them, extending down feet the feeling was all over her body. This is a spontaneous report from a contactable nurse. A 56-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular from 17Dec2020 09:30 at single dose for immunization (reported as COVID-19 vaccine). Medical history included vertigo and small whole in heart. Concomitant medication included acetylsalicylic acid (BABY ASPIRIN), ergocalciferol (VIT D), magnesium taurate, selenium and zinc. The patient previously took Kepra, Oxtellar and Sulfia which she had allergies. The patient experienced that last night (17Dec2020) her legs began burning like she had rubbed icy hot on them, extending down to her feet. Then woke at 2am and the feeling was all over her body. Awoke again at 6am and feeling was still there. She went to work, feeling was not confined to ankles and feet...icy hot although warm to touch. The patient underwent lab tests and procedures which included sars-cov-2 test: negative on 13Nov2020 and sars-cov-2 test: unknown results on Dec2020. Outcome of event was not recovered.	No current illness for this event.	BABY ASPIRIN; VIT D; ; ;
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	907736-1	"1245: Patient vitals taken, BP 169/122, HR107, O2 SAT 98%, Temp 98.4. Patient advised he no longer has the headache but still feels flushed . 1257: vitals taken again BP 167/122, HR 101, O2 SAT 98%. Patient also advised he was having GI upset (diarrhea). Dr. monitoring patient with this RN, aware of patient vitals, Allegra 80mg PO given at 1300 by CNO per protocol. 1315: BP 172/116, HR 108, O2SAT 98%. Dr. has advised patient to log BP's at home and that he may have underlying hypertension. Dr. has advised patient that he will be called for a follow-up appointment tomorrow with a physician. 1326: BP 174/104, HR 103, O2 sat 99%. Patient states he is now felling back to normal, denied headache and flushing at this time. Dr. had given the patient clearance to return to work at this time. Advised patient that if he starts to have any s/s again to go to Urgent Care or ER. RN will follow-up with Caregiver. 1537: Spoke to patient states he currently had a mild headache and is fatigued. States he left work an hour early and is going to go home and rest. 1547: Spoke with Dr., MD advised for Caregiver to be seen at Urgent Care today for follow-up. Patient states he feels ok to drive and will make his way to Urgent Care now. 1653: Patient called RN back, states he is feeling better and declines going to urgent care at this time. He advised his headache and fatigue is resolved, stating "I only have mild soreness at injection site." Patient states he will go to Urgent Care tomorrow for a follow-up. RN will follow-up with Caregiver tomorrow."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	907766-1	Starting the evening of the 5th day after receiving the vaccine I noticed a sore, irritated throat. By the 7th day it was a more severe sore throat, runny nose, violent sneezes and the beginning of a deep painful cough. No fevers have been noted to date, with the highest oral temperature of 98.6F on the 7th day. I called the employee hotline, had a virtual visit with a Dr and took the drive up COVID test around 11:00 am on 12/23/20. I am in self quarantine currently awaiting results of the COVID test.	none	xyzal, vitamin D3

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	908220-1	I experienced dizziness onset 5 minutes after the vaccine, mild, lasting about an hour. That night I experienced intense vivid nightmares, chills and temp 96.0. Friday night, dec 18th, awoke from intense vivid nightmares at 2 am, chills, arm 7/10 pain at injection site, all day, no erythema. On Saturday chills but no fever all day. At about 10pm abrupt onset of severe abdominal pain and prolonged projectile vomiting that awoke me from sleep after eating normal dinner that I shared w family none of whom were having similar symptoms. This lasted for about 90 minutes accompanied by severe abdominal pain, afebrile, 97.Dry cough started , lasting thru Sunday morning. spontaneously resolved. Sunday dec 20th, chills, nightmares, Monday chills, sweats, 96, 97 temps. Dec 22 Tuesday 3:30 am, awoke from sleep with sudden excruciating abdominal pain and dry heaves . Family shared Monday night meal, no other symptomatic people. <30 min started itchy palms, tingling lips, tongue, and face felt prickly. Eyes swollen, and sclera puffy bubbly. I took two 25 mg Benadryl w water, had trouble swallowing - immediately proceeded to Hospital ER - admitted - steroids IV, Pepcid, IV and in 4 hours when nausea and abdominal pain began again IV Zofran. 2 liters total of NS, discharge home around 12:30pm - stable to home to rest.	none	none
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	908226-1	Chills started at 1730, day of vaccine. Fever of 100.2 at 2100. Tylenol taken. Fever Returned at 0315 on 12/21/2020. Tylenol taken once more. Woke up with fatigue and mild fever at 0845 on 12/21/2020 of 99.9. Tylenol taken once more. Chills and fatigue through out the entire day of 12/21/2020.	Positive Covid on 11/23/2020. Covid Pneumonia confirmed by Chest Xray 12/14/2020.	Albuterol Inhaler and Virtussin AC SY.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	908292-1	Chills; sweating; Fever (99.1F) started at 22 hours and peaked at 99.9 (approximately 32 hours after vaccine administration); Diarrhea at 18 hours after administration; Injection site pain; Muscle aches; fatigue; severe nausea (no vomiting); mental fog (last about 4-6hrs); Within one minute: tachycardia (lasted about 3mins); dizziness (lasted 4-6hrs); weakness (lasted 12hours); This is a spontaneous report from a contactable consumer reported for herself. A 27-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) at single dose for COVID-19 immunization on 17Dec2020 at 19:30 via unspecified route of administration at the right arm in the hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient haven't known allergies. About 7 years ago the patient had received HPV vaccine on unknown date and she experienced reaction to excipient. Within one minute the patient experienced tachycardia (lasted about 3mins), mental fog (last about 4-6hrs), dizziness (lasted 4-6hrs), and weakness (lasted 12hours). Starting 15mins after vaccine, severe nausea (no vomiting) that last two hours. Muscle aches and fatigue started at two hours after vaccine administration. Injection site pain started 6hrs after administration. On 18Dec2020 chills and sweating. Fever (99.1F) started at 22 hours and peaked at 99.9 (approximately 32 hours after vaccine administration). Due to fever, other symptoms, and recent exposure to COVID at place of employment, COVID nasal swab was done on 19Dec2020 at 1300 to rule out possible active diagnose. Test pending at this time. Tylenol administered to reduce fever and symptoms. Outcome of events at the time of last observation was reported as recovering. Information about lot/batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	908297-1	I began intense itching & redness that began in hands & feet, then head, arms back of neck then torso turned red and itchy; I began intense itching & redness that began in hands & feet, then head, arms back of neck then torso turned red and itchy; This is a spontaneous report from a contactable consumer, the patient. A 52-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration on 20Dec2020 at 14:30 (at the age of 52 years old) as a single dose in the left arm for COVID-19 vaccination. Medical history included asthma from an unknown date. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. No known allergies. Concomitant medication included progesterone (PROGESTERONE), estriol (ESTRIOL), diazepam (VALIUM) all for unknown indications from unknown dates and unknown if ongoing. The patient did not receive any other vaccines within four weeks prior to the vaccination. The vaccine was given at a hospital. On 20Dec2020 at 19:00, the patient experienced she began intense itching & redness that began in hands & feet, then head, arms back of neck then torso turned red and itchy. The event resulted in a doctor or other healthcare professional office/clinic visit. The patient received treatment for the events which included steroids and benadryl. The clinical outcome of began intense itching & redness that began in hands & feet, then head, arms back of neck then torso turned red and itchy was recovering. It was also reported that since the vaccination, the patient had not been tested for COVID-19. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.	No current illness for this event.	;; VALIUM

She notes minimal pain at injection site. Has had no fever, no nausea/vomiting/diarrhea. She states that her entire body hurts, including hair, teeth, toenails, and fingernails - she describes as throbbing pain. She also reports pain in back and thoracic muscles to the extent that she cannot bend down to put on shoes. She notes that the back pain was not initially present but started around day 5 (12/22/20). She describes this as muscle pain and does not have visceral pain. She reports some relief with acetaminophen and ibuprofen. She also describes alternating episodes of feeling ""freezing cold"" with shaking chills followed by profuse diaphoresis (describes sweat as pooling and dripping). Acetaminophen and ibuprofen have not relieved or lessened the episodes of chills and sweats."	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	909123-1	Began just as sudden sharp headache on 12/21/20 at 6:00 pm, noticed after shift after showering, left upper extremity was slightly red, and slightly tender to touch. Not unbearable. 12/22/20 noticed redness was continuing to spread and arm was beginning to ache, still not unbearable. On 12/23/20 during shift, the redness in my left upper arm had spread from elbow to below injection site, arm was increasingly aching as well as new noticeable left sided facial swelling from directly underneath the left eye throughout the cheek area, and slightly tender. This is when I checked into the urgent care and was examined. At first the mid-level reported she thought I had experienced vaccine induced bells palsy; however, after consulting with the MD, this was dismissed. Left upper extremity was diagnosed as cellulitis and treated with bactrim and informed to take zyrtec or benadryl for facial swelling. If symptoms worsened, visit nearest ER. Also informed to report symptoms to CDC for tracking. Today I have been treated with 2 full days of antibiotics and the redness and swelling has reduced. Left sided facial swelling remains present.	None	calcium, magnesium, zinc and vitamin C
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	909140-1	Pfizer-BioNTech COVID-19 Vaccine EUA On 12/19/20 around 11:15 PM, patient experienced ? pinching? pain in amplit of left arm (arm of injection). Pain persisted throughout night with accompanying generalized underarm swelling (fluctuate). On 12/20, NSAIDs were taken to relieve pain. 1 dose of Advil were taken on 12/21 and 12/22 to manage pain. On 12/22, pain level on 1?10 scale was 8-9 in the morning with increased swelling, warmth, and discomfort. At night, swelling was less than that of morning. On 12/23 pain level was 3. No NSAIDs were taken and patient visited doctor at 10 AM. Upon examination, doctor made diagnosis of a localized lymph node/inflammatory response, possibly Cellulitis and prescribed Keflex to be taken 2 times daily for 10 days. Pain has mostly subsided (level 1 or 2 when it occurs), swelling has gone down but not completely resolved. Left underarm continues to feel fluctuate following day 2 of antibiotic regimen. Possible axillary lymph node reaction suspected. Patient has also experienced persistent redness, swelling, mild pain and itchiness at injection site. Most of swelling and pain has subsided, itchiness remains.	None	OLLY Women?s Multivitamin Vitamin D3 (25mcg - 1000IU) Vitamin C (500mg) Aurovela Fe 1.5/30
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	909173-1	Immediately after receiving the vaccine tongue felt fuzzy/a little swollen. Also lightheaded, dizzy, eyes not focusing very well. After 10-15 minutes, eyes focusing better but still lightheaded. ~1 hour later noted swelling of uvula, posterior palatal arches, tongue, neck, face, lips, intermittent wheezing. In addition the next day headache and rash started. Now day 9 with continued intermittent severe swelling, wheezing, rash and headache and some level of oral and facial swelling every day as noted above. Muscle aches started on day 8. Consulted with angioedema specialist; he felt was allergic reaction due to onset of symptoms. Had telemedicine visit with NP on 12/23/20. Had to go to Emergency Department on 12/25/20 for severe uvula, posterior palatal arch, face, lip, neck swelling unresponsive to oral Benadryl and oral steroids. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	909191-1	I am an RN and I received the Covid Vaccine on Friday, felt some expected fatigue and arm soreness on Saturday, but woke up Sunday for my shift with a dry throat and hoarse voice that progressive worsened that day. I got a Covid PCR swab Monday morning at 0900 and made an appointment to see my doctor that afternoon. At my appointment I had almost lost my voice, had some nasal drainage, slight sore throat, fatigue, and she felt I had decreased lunch sounds that warranted all abs and a chest X-ray. I was swabbed for strep, Flu A & B, and Covid antigen testing was done. All were negative. The CBC was mostly within normal limits. The chest X-ray show inflammatory process, a possible beginning pneumonia, and stranding. She prescribed a ZPak. I received a negative COVID PCR test result on Wednesday. I reported to my employee health nurse at my faculties where I work and received the vaccine and she asked me to fill out a VAERS report. Licensed provider note states 7December 21, 2020 To whom it may concern, This is a note to confirm that patient was seen in my office today for a doctors appointment. Patient was seen in office today, x-rays were taken, does as symptoms consistent with bilateral bronchitis, pre pneumonia right side of concern this started with the COVID vaccine. ?	None	Mirena IUD

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	909304-1	12/18 afternoon: asthma attack. This was the same as previous asthma attacks and occurred after my normal triggers (exercise in cold air). Symptoms resolved completely with albuterol. I was coughing continuously and strenuously for about 10 min before using albuterol. 12/18 evening: low-grade fever (100.1 F, baseline is <98) with chills. Also with altered mental status/delirium, which is typical for me while febrile. There was also nausea. 12/19: fever decreased to 99.2 F with normal mental status. New general malaise, worsened nausea. Single episode of vomiting, large volume of bile with some blood (streaks of fresh blood, larger volume of coffee grounds emesis mixed with bile). After vomiting I noted tachycardia to 130s--140s but this is a typical finding for me post-vomiting. 12/20: No further vomiting. Subsequent 2 bowel movements with moderate melena, since resolved. Fatigue and cold extremities, improving.	infectious mononucleosis November 2020	mesalamine, Adderall, Pulmicort, aspirin ec, standard multivitamin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	909312-1	The day after I got my vaccine (a Thursday) my arm hurt really bad, and my body aches started as soon as I woke up, but were not severe. As the day progressed, the body aches got more severe and were accompanied by a headache and fever by around 7 PM. I literally felt like I was dying, and have never had body aches that bad before in my life. I laid on my couch and didn't move until 11 PM, with no appetite, and then went to bed. The day after that, when I woke up the body aches weren't as bad, and my temp was 98.8. Again, around 3 the body aches started getting worse, I was so tired I could barely function, couldn't eat without being nauseous, and laid in bed as still as possible until I could fall asleep. The Saturday following my vaccine, I woke up at 6 and my body hurt so bad it felt like I couldn't move, my head was so bad even the light from the shades felt like it was piercing me, and I still had no appetite. I stayed in bed until 10 until the body aches got a little better, and was able to go about my day almost as normal, just with my body feeling kind of like I slipped and fell on ice. On Sunday, I still had no appetite and was nauseous without even eating. My body still ached, but I was able to do things like the dishes and just hang out at home. My headache was still unbearable. I called the hotline number for my hospital that was given to me when I got my vaccine, and they scheduled a COVID nasal swab test at 1. I put on sunglasses to drive the 10 minutes to the clinic, got my test, and went home and went to bed. Since I had a COVID test ordered by my employer, I wasn't allowed to work until I got the results and HR cleared me. The results were negative, and I didn't get cleared by HR until Monday morning. When I contacted my supervisor, he wanted me to stay home anyway since the body aches (even though they were getting better), fatigue, headache and nausea were still there, regardless of a negative covid test. He was worried I had the flu. I made an appointment with my primary care doctor for 2:10 on Monday, and he told me it was just serum sickness. I went home and went to bed. My body aches and fatigue fully went away by Wednesday, and my headache still remains, on the following Saturday. I haven't had a headache in maybe 5 years.	No illnesses at the time of vaccination or up to one month prior	40 mg of Latuda once a day, 3 mg of melatonin once a day

Patient states tongue was swelling. No difficulty breathing, no airway obstruction. Assessed by on site provider, 25 mg po Benadryl liquid ordered and given without difficulty BP elevated to high of 151/95, 911 call placed, EMS on site. Patient refused transport to hospital and was picked up by her mom after signing AMA documents. Advised to not drive, not be alone and was being monitored by mom who was a physician. Patient states tongue swelling improving on discharge to mom. Last BP 140/90. Patient is obese.	None reported	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	909411-1	Second day on December 21 had moderate arm pain extending up neck to base of head. Dec 22 pain was gone but began to have continuous twitching of left eyelid. Dec 23 eye pain. Started prednisone dose pack on Dec 22. Eye twitching gradually improved and am currently having minimal symptoms	Type 1 juvenile diabetes HTN	Humalog insulin pump Lisinopril Wellbutrin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	909423-1	Day of vaccination (Monday) and day after vaccination (Tuesday) experienced a sore, tender arm and mild fatigue. Wednesday morning woke up with tender, swollen lymph nodes and sore throat. Arm still sore as well at injection site. Thought sore throat may have been due to acid reflux so went to work at the hospital as usual. Thursday morning woke up with a worsening sore throat with difficulty swallowing, cough, nasal/sinus congestion, ear fullness, fatigue with dizziness, and nausea. Was unable to perform daily functions. Notified employee health at the hospital who advised a covid test and exclusion from work. A rapid strep test was also performed which was negative. Friday symptoms still present but slightly improved. Saturday morning received negative covid test result and approval to return to work if respiratory symptoms improved and under control. Today is Saturday afternoon, now returned to work (arrived late). Experiencing mild symptoms currently similar to the common cold.	none	sertraline, bupropion, propranolol ER, sumatriptan, Zofran, magnesium oxide, fish oil, b complex, milk thistle, Benadryl, melatonin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	909424-1	within 3 min of receiving the vaccine, I experienced flushing, racing heart, lightheadedness, dizziness, mentally fog, winded/ shortness of breath, and felt like an adrenaline rush. All that calmed down by 30 min. Then experienced nasal congestion for an hour. within 3 hours of vaccine, developed a headache and later that day it worsened and chills developed. The next day was just slight headache. The second day was sore arm and fatigue that lasted for 1 to 2 more days.	No current illness for this event.	Humalog Insulin, Allegra, Vit C, D, E, Calcium, Centrum Silver multivit

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	910273-1	On 12/27/2020, I woke up with body aches and a headache around 0530. At 1230, I began experiencing severe stomach pain. I went into the bathroom and began sweating profusely. I had a bowel movement and started dry heaving. I then fell on the floor, and felt extremely weak. I did not bare down when having a bowel movement, I do not believe this was a vagal response. At this point I was still sweating profusely, my body hurt all over, I couldn't catch my breath, and I was incredibly weak. I crawled down the hall way to get my phone as I was home alone. My arms then began to tingle and my hands completely spasmed, I couldn't move them. My fingers locked completely straight but my palms closed. I activated Siri on my phone because I couldn't use my fingers, and had her call 911. I was having a very hard time catching my breath. By the time EMS arrived (about 20 minutes on the phone with 911), I had started feeling better. I had chills, and still felt out of it, but I was breathing better and my hands unlocked. My arms were still tingling. I let them check me out. My BP was normal, my O2 sat initially said 88% but was 98 by the time they left. EKG was normal. I didn't go to the hospital with them, I stayed home. I didn't move around much the rest of the day. I felt tired and had lack of appetite. Today on 12/28/20, I'm feeling better but I am still taking it slow, just in case.	none	Lexapro
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	910292-1	Blood pressure rose 190/100; got headaches in 10 minutes and started getting heavy chest; got headaches in 10 minutes and started getting heavy chest; Throat started to get tight, voice changed; Throat started to get tight, voice changed; had heart palpitations; Fast heart beat, difficulty breathing, dizziness and weakness; Fast heart beat, difficulty breathing, dizziness and weakness; Fast heart beat, difficulty breathing, dizziness and weakness; Fast heart beat, difficulty breathing, dizziness and weakness; This is a spontaneous report from a contactable healthcare professional. A 42-year-old female patient received first dose of bnt162b2 (Pfizer-BioNTech COVID-19 vaccine; lot EK5730), intramuscular on 17Dec2020 17:00 at single dose (left arm) for Covid-19 immunisation. Medical history included diabetic, high blood pressure and allergies to fruits such as canaloo, and peaches. Concomitant medications included amlodipine, lorazepam, metformin, and ascorbic acid (VITAMIN C). On 17Dec2020 17:15, the patient experienced headaches in 10 minutes and started getting heavy chest, throat started to get tight, voice changed and injection was given; blood pressure rose to 190/100 and had heart palpitations, fast heartbeat, difficulty breathing, dizziness and weakness. The patient was given Epi injection and benadryl shot as therapy for the events. The vaccine was administered at the hospital. The patient did not receive any other vaccines within 4 weeks prior to the Covid vaccine. The patient visited a doctor or healthcare professional office/ clinic due to the event. The patient was not diagnosed with Covid-19 prior to vaccination and since the vaccination, the patient had not yet been tested for Covid-19. Outcome of events was recovering.; Sender's Comments: Based on the compatible time association ,the reported events are possibly related to suspect ,bnt162b2 injection in this patient. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	;;; VITAMIN C
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	910323-1	"Patient states that she waited her required 15min at the vaccine clinic. She felt no symptoms. One hour later however she felt tired so she took a nap. That night she felt cold and had to grab a blanket. Before bed she felt that the skin on her abdomen was feeling "tingly." The next morning she noticed a rash on the abdomen that is itchy. She already takes 25mg benadryl daily for allergies so she started taking it twice a day but that hasn't helped. She now notices the rash in the b/l groin, left thoracic back and left arm (upper and forearm). The rash is still present and itchy 5 days later so she came to my clinic today. I prescribed her a 6 day dose pack of methylprednisolone and to continue benadryl."	No current illness for this event.	amitriptyline, minivelle, benadryl allergy sinus headache

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	910611-1	severe back pain/ back aches; body aches; inflammatory reaction; This is a spontaneous report from a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs). A contactable female nurse (patient) of unknown age reported that she received BNT162B2 (COVID VACCINE), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. Patient got the Covid vaccine on Thursday (date not specified). She was taking ibuprofen (MOTRIN) (later clarified as ibuprofen) for anti-inflammatory. She went to a doctor visit yesterday (18Dec2020), and then her doctor told her that because ibuprofen was an anti-inflammatory, she shouldn't be taking it during, right after the vaccine because of inflammatory reaction and so patient stopped taking it and switched over to paracetamol (TYLENOL), now she was in severe back pain/ back aches and body aches, but anyways she was just going to end up taking it if this took much longer. Outcome of the events was unknown. Information about lot/batch number has been requested; Sender's Comments: From the information provided it is unclear which event is the intended subject of this spontaneous report and what is the reporter's perceived relationship to the vaccine. In addition, the lack of critical information (e.g. immunization date) makes a global medical assessment impossible. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	910634-1	A day after having the vaccine, I experienced eye soreness in my right eye. The next morning both my eyes were blood shot. I administered eye drops and went on about my day. Late that evening they were really red and watery and my vision was blurred. I went to the optometrist on Monday morning and was diagnosed with Primary iridocyclitis, bilateral. My iris had been attached to my lens from the inflammation, but had detached it self. I was put on steroid drops and made to keep my eyes dilated until my follow up appointment. Went to my follow up appointment today December 28, 2020. My eyes are looking better, but not back to normal yet. Advised to keep administering my steroids drops and only use the dilation drops every other day. I will follow up on Thursday.	None	enalapril maleate 10mg Vitamin D3 Hydrochlorothiazide 25mg

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	910635-1	New diagnosis of diabetes 5 days after receiving vaccine with no past medical of DM and no family history; This is a spontaneous report from a contactable Nurse (patient). A 31-year-old female non-pregnant patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number=EJ1685), via an unspecified route of administration on 18Dec2020 14:00 at arm left at single dose for covid-19 immunization. The COVID-19 vaccine was administered at Hospital. Medical history included asthma and hypertension. The patient had no known drug allergies. Concomitant medication included cetirizine, budesonide, formoterol fumarate (SYMBICORT), escitalopram oxalate (LEXAPRO), montelukast and omalizumab (XOLAIR). No other vaccine in four weeks prior to the COVID vaccine. The patient experienced new diagnosis of diabetes 5 days after receiving vaccine with no past medical of diabetes mellitus and no family history. The event result in doctor or other healthcare professional office/clinic visit and Emergency room/departement or urgent care. Adverse event start date was 19Dec2020 06:00 AM. Treatment received included fluid bolus, computerized tomogram (CT) scan and labs. The patient underwent lab tests and procedures which included computerized tomogram and laboratory test with unknown results on Dec2020. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient was not been tested for COVID-19. The outcome of the event was recovered with lasting effects.; Sender's Comments: The reported diabetes was unlikely causally related to the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), considering the latency of the onset of the event. A possibility that the vaccination unmarked subject's diabetes cannot be completely excluded. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	; SYMBICORT; LEXAPRO; ; XOLAIR
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	910639-1	Bell's palsy/facial paralysis: This is a spontaneous report from a contactable other Health Professional (patient). A 28-years-old female patient received first dose BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/ batch number: 33121, brand: EJ1685), via an unspecified route of administration at left arm on 18Dec2020 09:30 at single dose for covid-19 immunization at hospital. Medical history included anxiety, depression, diagnosed COVID-19 prior vaccination. No known allergies. Concomitant medication included fluoxetine hydrochloride (PROZAC) in two weeks. No other vaccine in four weeks. The patient experienced bell's palsy/facial paralysis on 21Dec2020 19:00 with outcome of not recovered. The seriousness was reported as no. The adverse event result in doctor or other healthcare professional office/clinic visit, Emergency room/departement or urgent care. The treatment received for the adverse event was reported as unknown.; Sender's Comments: Based on available information, a possible contributory role of the subject vaccine cannot be excluded for the reported event of Bell's palsy due to temporal relationship. However, the reported event may possibly represent intercurrent medical condition in this patient. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	910941-1	Pfizer-BioNTech COVID-19 Vaccine: One day after receiving vaccine patient awoke with myalgias, fatigue, fever (maximum temperature: 100 degrees Fahrenheit), headache, and rhinorrhea. Patient was evaluated via telehealth two days after vaccine administration and denied throat pain, chest pain, chest tightness, or wheezing. No difficulty swallowing or breathing. Patient was instructed to follow-up with a health care provider immediately for worsening, persistent, or concerning symptoms.	None reported	Alprazolam, fluconazole, levonorgestrel intrauterine device, metronidazole
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	910962-1	I had the typical local reaction for the first 3 days following the injection: redness, soreness, swelling at injection site, occasional itchiness and occasional burning, warm to touch. It was resolved by the 4th day. Then on the 8th day, I felt a little itchy and itched the site gently. Three tiny hives appeared and became a moderate-sized red swollen area by the evening with mild pain and some burning. The 9th day it was very red, moderate-to-large sized, some burning, warm to touch. The 10th day, today, it doesn't look angry anymore, is no longer warm to touch, looks like it's resolving but still some swelling that feels like it goes around my upper arm. I had it checked by an NP today and she thinks it's all related to the injection being administered lower than my deltoid, instead went into the subcutaneous/fat area. So we will watch it but she doesn't think it's infected or any reason to not take the 2nd dose when it's time.	n/a	zyrtec, singulair, multi-vitamin

Headache at 12 hours thru currently, piercing behind right eye day 3 thru 6, eye watering on day 5 during worst fever, occasional nausea when headache is worst. Fatigue at 12 hours thru day 6.	Occasional headache and congestion (sinuses)	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	911571-1	Mild Bell's Palsy affecting right side of face. Mild asymmetry noted, mild decreased muscle strength and tone, and slight right eye irritation. Symptoms with minimal progression by day 2. Started course of Prednisone on day 3 (12/28/20.) Currently symptoms persist but early in treatment course.	None	Synthroid Vyvanse Wellbutrin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	911605-1	C/O of right sided numbness and tingling. No SOB, NO Diaphoresis, No Chest pain. Pt transferred to the ED in no distress.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	911608-1	Worsening itchy rash on the belly (20cm x 13cm). loratadine 10mg Bid, triamcinolone 0.1% cream applied QID. Limited efficacy. Affecting sleep and daily activities.	None.	Ibuprofen 650mg once.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	911611-1	At 30 minutes after vaccination patient informs she felt palpitations, blurry vision and headache. The day after she noticed a lump on her left supraclavicular area, no other swelling noted.	none	none
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	911652-1	Patient experienced episode of severe leg cramping on 12/22/2020 that began in early AM and lasted until noon. Patient experienced another episode on 12/24/4040 of cramping that began in the legs and went up to the head that felt like muscle tension. This episode also began in the early AM and lasted until noon. However, patient did have residual minor leg cramping. Patient did follow-up with his PCP, who obtained bloodwork on patient. On 12/28/2020, patient states all symptoms have been resolved.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	912059-1	Hypotensive (diastolic 43, systolic 103); neurological tingling -upper spine/between shoulder blades; felt crummy; This is a spontaneous report from a contactable consumer. A female patient of an unspecified age received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in left arm on 21Dec2020 15:45 at single dose for Covid-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient experienced hypotensive (diastolic 43,systolic 103), neurological tingling - upper spine/between shoulder blades and generally felt crummy on 21Dec2020 at 15:45 (also reported as occurred within 5 minutes of shot). The patient underwent lab tests and procedures which included blood pressure measurement: 103/43 on 21Dec2020. Event resulted in emergency room and physician's room visit. Treatment received intravenous (IV) fluid replacement, lab tests (unspecified), 6 hour observation. The outcome of events was unknown. Information on the lot/batch number has been requested.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	912065-1	facial itching; throat swelling; lump in throat; hoarse voice; This is a spontaneous report from a contactable nurse. A 37-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: ELO140), via intramuscular on left arm on 23Dec2020 at 09:45 at single dose for COVID-19 immunization. The relevant medical history and concomitant medications were not reported. The patient experienced facial itching, throat swelling, lump in throat and hoarse voice, all at 11:30 on 23Dec2020. The most recent COVID-19 vaccine was administered at hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The events resulted in doctor or other healthcare professional office/clinic visit for the patient. The patient received IV benadryl and Epi pen as the treatment for the events. Prior to vaccination, the patient was unknown if diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The outcome of the events was recovered on an unspecified date in Dec2020.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the events pruritus, pharyngeal swelling, sensation of foreign body and dysphonia cannot be excluded. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	913221-1	I received my vaccine on 12/18/2020. The side effects I experienced were initially as expected. Mild headache, muscle pain at the injection site. However, the muscle issues have not subsided, and have actually gotten worse. Day 3 I began having a burning sensation in my underarm area radiating back towards my triceps. Muscle spasms continued to increase and spread to include deltoid, trapezius, and SCM muscles. Yesterday I developed a fever and began having a burning sensation down my triceps muscles and radiating into my forearm (radial side). No visible rash noted. Slight weakness in left arm.	None	Levothyroxine 175 mcg, Citalopram 40 mg, Zyrtec 10 mg, Vitamin D
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	913234-1	Unusually high level of fatigue / exhaustion. Feeling ? flush? Headache Feeling feverish but no actual fever. Has lasted So far from 12/24 to 12/29. Six days. A bit better day 6.	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	913250-1	Rig he arm sever pain at elbow. Swelled and painful right axilla lump nodes	None	Phentermine
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	913912-1	BP of 176/126mmhg/persistent severe hypertension/continued severe elevation of BP of 178/130mmHg; intermittent chest pains; severe nausea; rash and hives on left side of arm where injection site was, as well as left side of face; rash and hives on left side of arm where injection site was, as well as left side of face; rash and hives on left side of arm where injection site was, as well as left side of face; rash and hives on left side of arm where injection site was, as well as left side of face; mild progressive headache; body aches; chills; fatigue; fever of 100 degree F; This is a spontaneous report from a contactable Other Health Professional (patient). A 29-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: unknown, intramuscular in the left arm, first dose on 18Dec2020 12:30 at a single dose for immunisation. Medical history included ongoing gestational hypertension in 2016 that never recovered, with controlled hypertension, asthma/COPD, and seasonal/animal allergies. Concomitant medication included sertraline hydrochloride (ZOLOFT) and losartan. The patient is not pregnant. The patient previously took and had allergies to erythromycin and nitrous oxide. It was reported that within 20-30 minutes of receiving covid vaccine on 18Dec2020, the patient developed mild progressive headache, body aches, chills, fatigue, fever of 100 degree F. At approximately 8:00 p.m. same day of vaccination, she developed rash and hives on left side of arm where injection site was, as well as left side of her face. Immediately following this, she had intermittent chest pains in which she took a BENADRYL 25 mg with some relief. Next day (19Dec2020), progressive headache persisted to a severe headache, severe nausea, persistent chest pains and a BP of 176/126mmhg. Reported to a place for evaluation with persistent severe hypertension and severe headache treated by toradol, compazine, and Benadryl. She was released from the ER with improved blood pressures and reduced headache. The following day Sunday Dec2020, progressive and severe headache occurred with continued severe elevation of BP of 178/130mmHg. Current treatment of losartan 50 mg was increased to 100 mg to attempt control. She was then placed on chlorthalidone/amlodipine. The events resulted in doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care. The outcome of the events mild progressive headache, body aches, chills, fatigue, fever of 100 degree F, rash and hives on left side of arm where injection site was, as well as left side of face, intermittent chest pains, severe nausea, and BP of 176/126mmhg/persistent severe hypertension/continued severe elevation of BP of 178/130mmHg was not recovered (reported as symptoms persist). The patient was not diagnosed with Covid 19 prior to vaccination and she had not been tested since vaccination. Information on the lot/batch number has been requested.; Sender's Comments: Based on the compatible time association, the hypertension aggravated is possibly related to bnt162b2 administration. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	Gestational hypertension (Gestational Hypertension (2016) that never recovered)	ZOLOFT;

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	913914-1	blood pressure was super elevated, in the 190/110 range; It was getting close to stroke level; woke up and felt restlessness and agitation; Headache; felt really restless and anxious; felt really restless and anxious; was not able to sleep/ could not go back to sleep; This is a spontaneous report from a contactable consumer (patient). A 53-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: EK5730, expiration date: Mar2021 intramuscularly in left deltoid from 17Dec2020 at single dose for COVID-19 immunization. Patient medical history included seasonal allergy. Concomitant medication included mometasone furoate (FLONASE) via nasal from 2018 (about 2 years ago) and ongoing at 1 spray each nostril, 1x/day for seasonal allergy. The patient previously received flu shot, on Oct2020 (2 months ago) for immunization. Patient was a firefighter and reported that he received the vaccination in the afternoon of 17Dec2020. On that afternoon, he was on duty and felt really restless and anxious and was not able to sleep. He did not sleep at all that night. He maybe got like an hour or 2 on Friday after his shift. Friday night he had the same kind of deal and it continued on into Saturday. He did crash and burn (pending clarification) on Saturday night. On Sunday, he got up and felt normal again. A few hours later on Sunday, it started up again and then it went away. He said that after dinner Sunday evening it started up again, but he was able to get some sleep. He said that Yesterday, 21Dec2020, he was fine. He took off yesterday. This morning on 22Dec2020 at 0200 he woke up and felt restlessness and agitation and he could not go back to sleep. He said that he had a headache and his blood pressure was super elevated, in the 190/110 range on 22Dec2020. It was getting close to stroke level. He said that he thought about going to the ER, but did not experience any stroke or cardiac symptom's, although his blood pressure is still high, but not as high as it was. He has not gotten any sleep since then. He said that he has an appointment to see his physician this afternoon at 1300 22Dec2020. It was reported that all events require physician office visit. Got his flu shot like 2 months ago and nothing like this happened. He said that he heard with the second round there are supposed to be more symptoms like flu like symptoms with the Covid vaccine like fever, muscle aches. Outcome of the events was reported as unknown.	No current illness for this event.	FLONASE
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	915215-1	Dizziness. Equilibrium was off. This started within an hour of the vaccine and lasted 24 hours. Had to take the following day off of work. Also, burning in the chest (like heartburn) lasted 48 hours.	None	Metformin, Jenuvia, Lisinopril, Atorvastatin, Sinemet, Low dose Aspirin, Vitamin D, Focus, Iron,
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	915415-1	I have an autoimmune disease, psoriatic arthritis and osteoarthritis. This caused my flare up. My knees and ankles swelled to the size of grapefruits. I could not move legs for about 18 hours. From Friday to Sunday, I could not get out of bed. Monday night, I really started feeling better and was able to take care of my kids again on Tuesday. I went back to my normal shift on Wednesday. I was under the care of my PCP and Rheumatologist.	No	Otezla, Zolof, and a multivitamin, birth control
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	918753-1	Left sides shock like pains in head. Lasts 3-5 seconds and go away. It's a stabbing shock like pain. Started on Thursday 17Dec2020 at 7:45 pm; Left sides shock like pains in head. Lasts 3-5 seconds and go away. It's a stabbing shock like pain. Started on Thursday 17Dec2020 at 7:45 pm; This is a spontaneous report from a contactable nurse reported for herself. A 28-year-old female patient (no pregnant) received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscularly in left arm on 16Dec2020 14:00 at single dose for COVID-19 immunization. Medical history was none. The patient's concomitant medications were not reported. The patient experienced left sides shock like pains in head, lasted 3-5 seconds and went away. It's a stabbing shock like pain. The events started on Thursday 17Dec2020 at 19:45. It was unknown whether treatment was received for the events. The events resulted in doctor or other healthcare professional office/clinic visit. The events were reported as non-serious. The most recent COVID-19 vaccine was administered in hospital. The patient had not received any other vaccines within 4 weeks prior to the COVID-19 vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The outcome of the events was not recovered. Information on the lot/batch number has been requested.; Sender's Comments: Based on the compatible time association, the event left sides shock like pains in head is possibly related to suspect BNT162B2 administration. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate. Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	918760-1	Tachycardia; Intermittent palpitations; Low grade fever/fever; muscle aches; This is a spontaneous report from a contactable physician. A 27-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscularly in unknown arm on 17Dec2020 at single dose for routine mass immunizations (covid-19 immunization). The COVID-19 vaccine was administered at Hospital. Not a military facility. The patient's medical history was reported as none and concomitant medications was none (he was on no other medications). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced tachycardia, intermittent palpitations, low grade fever/fever all started somewhere in the morning of 18Dec2020 and muscle aches on 17Dec2020. Physician assessed tachycardia and intermittent palpitations as serious due to medically significant. Physician stated that one of his workers had the vaccine and proceeded to have tachycardia and low grade fever. He would like to know if patient should get the second dose. The patient had mostly tachycardia with some intermittent palpitations. Patient was seen in his office on 18Dec2020, and got the COVID vaccine on 17Dec2020. He also reported fever and muscle aches, although the fever was subjective and was not documented. Tachycardia improved and sent him to cardiology on 21Dec2020. It was not life threatening and they did an Electrocardiogram (EKG). His initial heart rate was 130. When he was seen again in their office on 21Dec2020, it was 93, which was baseline. It improved. He never got his temperature. The highest in office was 99.5 degrees Fahrenheit. He had some muscle aches. The physician just sent patient to cardiology because he was having intermittent tachycardia and intermittent palpitations. Two visits to physician office. He was seen on 18Dec2020 and again on 21Dec2020. Relevant tests: they did testing for tachycardia but not related specifically. They did thyroid and EKG in office and he did not know if test were back. EKG was ok. The Thyroid, Complete blood count (CBC) and lipid (all were on an unknown date in Dec2020) were not back and were just done to make sure there were no cardiac issues. The outcome of the events was recovering. The lot/batch number has been requested.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the events tachycardia and palpitations cannot be excluded. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	918772-1	short of breath; Intense headache; tiredness; body aches; This is a spontaneous report from a contactable other healthcare professional (patient). A 47-year-old female patient (not pregnant) received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: EL0124), via an unspecified route of administration on 23Dec2020 at 14:30 on Left arm at single dose for COVID-19 immunization in hospital. The patient medical history included Rheumatoid arthritis, lupus. No known allergy, no allergies to medications, food, or other products. Prior to vaccination, patient was not diagnosed with COVID-19. Concomitant medications included baricitinib (OLUMIANT), hydroxychloroquine, prednisone. Patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced Intense headache, tiredness, body aches, short of breath on 24Dec2020; events were resulted in: Doctor or other healthcare professional office/clinic visit. Since the vaccination, patient had been tested for COVID-19 on 27Dec2020: Nasal Swab, result was unknown. No treatment was received for the events. The outcome of the events was not recovered.	No current illness for this event.	OLUMIANT; ;

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	918781-1	intermittent tingling in her right arm; lymph node swelling on the side of her neck; right sided Bell's Palsy to her face; This is a spontaneous report from a contactable physician. A 44-year-old female patient received single dose of BNT162B2 (Solution for injection, lot number: EJ1685, Expiry Date: Mar2021), via an unspecified route of administration on 18Dec2020 for immunization. The vaccine was given roughly around 4:30PM at the left arm. Vaccination Facility Type: Hospital. Vaccine was not administered at military facility. Medical history included underlying condition of Lymphoma. It was treated in 2017 and she has been off all medications since 2018. Patient had no relevant family medical history. There were no concomitant medications. The patient had no medications in over 2 years. The patient had no prior vaccinations (within 4 weeks). The patient had right sided Bell's Palsy on an unspecified date in Dec2020 (Either Sunday or Monday, so either the 20th or 21st) wherein she got pain in the right ear. She thought she had an ear infection. She treated herself with antibiotics. 7 days later, she noticed weakness. On day 8, which would have been 26Dec2020, she had complete paralysis. It was ongoing. It was stable, but hard to tell. Patient went to the ER on 26Dec2020 for facial droop. She went to Physician office at Urgent Care on 25Dec2020 thinking it was an ear infection. On 23Dec2020 she had lymph node swelling on right side of neck, that was probably after the ear and she didn't worry about it. She thought maybe it was an infection. It started between onset of ear pain and Bell's Palsy. On 26Dec2020, she had intermittent tingling in right arm. She noticed it on the same day as facial paralysis. She doesn't notice any weakness in the arm. Patient had recent blood work (results and date not reported). The patient considered the events as serious; medically significant. The outcome of lymph node swelling on the side of her neck was recovering (was also reported to be ongoing at the time of reporting), while the other events was not recovered. The physician considered the events related to the Pfizer product.; Sender's Comments: Based on the temporal relationship, the association between the events facial paralysis, tingling in right arm, and lymph node swelling on right side of her neck with BNT162b2 can not be fully excluded based on the limited information. The medical history of lymphoma might have been contributory to the lymph node swelling as well. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	918788-1	High blood pressure 187/95; Heart rate at one time 210 bpm; chest pain; Shortness of breath; This is a spontaneous report from a contactable pharmacist (patient) reported for herself that a 45-years-old female patient received first dose of BNT162B2 (lot number: EH9899), via intramuscular in left arm on 22Dec2020 07:00 AM at single dose for COVID-19 immunization. The patient was not pregnant. No known allergies. No allergies to medications, food, or other products. No other vaccine was received within 4 weeks prior to the COVID vaccine. No other medications were received within 2 weeks of vaccination. The patient was not diagnosed with COVID-19 prior vaccination and patient was not tested for COVID-19 since the vaccination. There were no medical history or concomitant medications. The patient experienced high blood pressure 187/95, heart rate at one time 210 bpm, shortness of breath and chest pain on 23Dec2020 10:00 AM. The events resulted in doctor or other healthcare professional office/clinic visit, emergency room/departement or urgent care. Treatment was received for heart rate at one time 210 bpm which included lab works and medication given propranolol to decrease heart rate. The outcome of the event was recovering.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the events hypertension, heart rate increased, chest pain and dyspnoea cannot be excluded. The information available in this report is limited and this case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	918977-1	PCR test positive for COVID-19 but no signs of COVID-19; PCR test positive for COVID-19 but no signs of COVID-19; This is a spontaneous report from a contactable physician reporting for himself. A 70-year-old male patient received the 1st dose of bnt162b2 (BNT162B2), via an unspecified route of administration in arm left, on 17Dec2020 at 09:00 AM, at single dose, for Covid-19 immunisation. Medical history included hypertension, high cholesterol, benign prostatic hyperplasia, drug allergy and food allergy all from unknown date and unknown if ongoing. The patient had not been diagnosed with COVID-19 prior to vaccination. The patient received unknown medications within 2 weeks of vaccination. Historical vaccine included typhoid vaccine (unknown trade name) on unknown date and the patient experienced drug allergy. The day after vaccination with bnt162b2, on 18Dec2020 at 04:00 PM, the patient experienced PCR test positive for COVID-19 but no signs of COVID-19. The patient did not receive any treatment as a result of the event. The event resulted in doctor or other healthcare professional office/clinic visit. The patient underwent lab tests and procedures which included: COVID-19 PCR test positive (18Dec2020), nasal swab positive (18Dec2020). Outcome of the event was unknown. The information on the lot/batch number has been requested; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of COVID-19 PCR test positive and suspected lack of efficacy due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	919909-1	Tested positive for covid; Tested positive for covid; This is a spontaneous report from a contactable nurse (patient). A 33-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899) intramuscularly at right arm on 18Dec2020 14:30 at single dose for COVID-19 immunization. Medical history included asthma. No allergies to medications, food, or other products. The patient's concomitant medications were not reported. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient developed severe nasal burning sensation the first two days of injection along with severe headache that lasted for 4 days. He lost his sense of taste and smell (23Dec2020) 5 days after vaccine was administered, tested positive for Covid (23Dec2020 16:30) with use of ABBOTT rapid test which was performed at his employment. Pending Covid nasal swab fulgent which was obtained on 23Dec2020 and sent out to reference lab. Patient was just wondering if any of these symptoms and/or testing positive after administration was a rare side effect. The adverse event resulted in doctor or other healthcare professional office/clinic visit. No treatment received for the adverse events. Prior to vaccination, the patient was not diagnosed with COVID-19. The outcome of the events was not recovered; Sender's Comments: Vaccine BNT162B2 provides protection to COVID-19 after at least 7 days have elapsed from the second dose (21 days post first injection). These conditions are not met in the present report. The reported symptoms are compatible with COVID-19 illness.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	919917-1	had another COVID test with positive results on 23Dec; had another COVID test with positive results on 23Dec; This is a spontaneous report from a contactable consumer. A 43-year-old female patient received bnt162b2 (BNT162B2, lot number and expiry date were not reported), via an unspecified route of administration on 18Dec2020 at a single dose for covid-19 vaccination. The vaccination was done in the hospital. The patient's medical history and concomitant medications were not reported. The patient was initially tested negative for covid-19 on 13Dec2020. The patient was not pregnant. The patient believed she may have been infected with COVID as early as 13Dec2020 based on symptoms but test results at that time came back negative. She had vaccine on 18Dec2020 and when symptoms hadn't resolved had another COVID test with positive results on 23Dec2020. The event resulted to a doctor or other healthcare professional office/clinic visit. There was not treatment for the event. The reporter considered the events as non-serious. The outcome of the event was recovering. Information about batch/lot number has been requested.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	920130-1	<p>Angioedema; This is a spontaneous report from a contactable Other Health Professional (patient). A 40-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: EL1284, intramuscular in the right arm (also reported as right shoulder), first dose on 22Dec2020 00:30 at a single dose for Covid-19 immunization. The patient's relevant medical history included severe reaction to some animal dander and pollen, severe reactions to poison oak, possible drug induced reactions (unspecified) post C-section, mild rash with influenza vaccine this year (2020) (with no other hx of adverse reaction to a vaccine); had allergies to pollen, mold, some animals. The patient previously took influenza vaccine (split virion, inactivated) and experienced rash. The patient had no covid prior vaccination nor was she tested post vaccination. Adverse event reported was angioedema on 24Dec2020 with outcome of recovering. Systems started appearing on 23Dec2020 evening with slight rash and fluid collection under right eye. Developed more rash on 24Dec2020. In the evening to early morning of 25Dec2020, symptoms worsened significantly. Rapid swelling to face occurred. Swelling was concentrated around eyes and cheeks the most. Both right and left side of the face and neck were affected. However, the right side face had a more pronounced reaction. MD ordered oral prednisone and Benadryl as treatment plan. Also, ordered episode-pen for a worst case scenario. Symptoms have been improving under treatment but still persist some. The events were reported as non-serious. The adverse event start date was 24Dec2020 (as reported). The event resulted in doctor or other healthcare professional office/clinic visit.; Sender's Comments: There is a reasonable possibility that the event angioedema was related to BNT162b2 based on known drug safety profile and temporal relationship. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.</p>	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	920961-1	<p>result back w positive covid; positive COVID-19 test with symptoms; This is a spontaneous report from a contactable nurse reporting for herself. A 39-years-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration on 19Dec2020 11:00 (at age 39 years old) as a single dose (Dose 1) in the left arm for COVID-19 vaccination. The patient was not pregnant at the time of vaccination. The patient was not administered any other vaccine in the 4 weeks prior to COVID-19 vaccination. Medical history was none. There were no allergies to medication, food, or other products. The patient's concomitant medications were not reported; however the patient had not received any other medications in the last 2 weeks. The patient experienced a sore throat, voice loss on day 4, loss of smell on day 5, went to test, and the result came back with positive COVID. The events resulted in a Doctor's office visit. The patient was tested post vaccination on 22Dec2020 via NAAT-PCR (nasal swab), with a positive result. The patient had not been diagnosed with COVID-19 prior to vaccination. There was no treatment received for the event(s). The clinical outcome of the event positive COVID was unknown. The event was reported as non-serious. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.; Sender's Comments: The association between the event drug ineffective (COVID-19 infection) with BNT162b2 can not be fully excluded.</p>	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	920980-1	<p>single hive on abdomen (itchy)/full body hives and itching; single hive on abdomen (itchy)/full body hives and itching; This is a spontaneous report from a contactable Physician. A 36-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EL0140, expiry date unknowns) intramuscular at left arm on 24Dec2020 at single dose for Covid-19 immunization in a hospital facility. Medical history included Anxiety, Hypertension, and GERD (gastroesophageal reflux disease). The patient was not diagnosed with Covid-19 prior to vaccination. Concomitant medications included diphtheria vaccine toxoid, pertussis vaccine acellular, tetanus vaccine toxoid (TDAP) on 08Dec2020 for immunization; bupropion hydrochloride (WELLBUTRIN), amlodipine, omeprazole; from unspecified date for unspecified indication. On 25Dec2020, the patient developed a single hive on abdomen (itchy), and on 26Dec2020 the patient developed full body hives and itching but spared the face and mucosal surfaces. The patient has no swelling, no respiratory symptoms. The patient has not been tested for Covid-19 since the vaccination. The patient received treatment of antihistamines (steroids if no improvement) on unspecified date. The hives responded to antihistamines temporarily. The outcome of the event single hive on abdomen (itchy)/full body hives and itching was not recovered. The reporter considered the events non-serious; did not result in death, was not life threatening, did not caused/prolonged hospitalization, was not disabling/incapacitating, not a congenital anomaly/birth defect.; Sender's Comments: Based on the information available, a possible contributory role of the suspect products cannot be excluded for the reported event hives and itching due to temporal association.</p>	No current illness for this event.	WELLBUTRIN; ;

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	920993-1	had loss of sense of smell and tested positive for the virus; had loss of sense of smell and tested positive for the virus; This is a spontaneous report from a contactable healthcare professional (patient). A 42-years-old female patient received her first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date not reported), intramuscular on 17Dec2020 as a single dose on the left arm, for Covid-19 immunization. The patient has no medical history and no concomitant medications (no other vaccines in four weeks and no other medications in two weeks prior to vaccination). The patient has no known allergies to medications, food, or other products. The patient had loss of sense of smell, no other symptoms on 25Dec2020 and tested positive for the virus yesterday, on 27Dec2020. The patient has no Covid-19 prior to vaccination. The patient underwent Covid test (Nasal Swab) and result was positive on 27Dec2020. The patient did not receive any treatment for the event. Outcome of the event was unknown. The events were assessed as non-serious by the reporter. No follow-up attempts are possible, information about lot/batch number cannot be obtained.; Sender's Comments: A possible contributory role of BNT162B2 vaccine cannot be excluded for event based on available information.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	Office Visit *	921037-1	nauseous; weak; no appetite; numbness on the skin of my arms and legs; I was post ictal for 2+ hours; seizures/having 2 non epileptic seizures; dizzy and lightheaded; This is a spontaneous report from a contactable nurse (patient). A 21-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE. Batch/lot number: EK5730), intramuscularly on 28Dec2020 07:45 AM at right arm, at single dose for covid-19 immunization. Medical history was none. There were no concomitant medications. The patient was not pregnant at the time of vaccination. The patient received vaccine around 7:45 AM. Within 2 minutes she felt extremely dizzy and lightheaded on 28Dec2020. She sat down and drank some Gatorade and took deep breaths. The feelings persisted 5 minutes later. She then woke up after having 2 non epileptic seizures while still in 15m waiting period. (This included posturing and color change) a rapid response was called and she was taken to the ER. She was post ictal for 2+ hours. Dizzy and nauseous, weak and no appetite for the rest of the day. She had no history of epilepsy. She also have numbness on the skin of my arms and legs within 24 hours of the vaccine. Onset date of all events (except dizzy and lightheaded) was reported as 28Dec2020 08:00AM. Treatment fluids, Zofran was received for all events. All event resulted in emergency room. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The outcome of the events was recovered with sequel.; Sender's Comments: A possible contributory effect of suspect BNT162BW on reported seizures cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	902524-1	I am a immunization nurse at this location. I gave 2 of the first 4 Covid vaccinations given at our location. Then I received dose # 5. It was easy. I did a couple of things and then returned to my desk. As I sat down, my arm started feeling very heavy. I was unable to send a text. I told staff that I was feeling funny and that I was going to the other room to lay down. Staff followed me and took my Pulse 100 and BP 164/ 82 (high for me). I felt shaky, but my hands were not shaking. Put a wet cloth on my head and laid there a few minutes, telling staff stories and laughing at my BF. When I sat up, my BP was 126/74 and pulse was 80. I stood up for a minute or two, then my legs got heavy and I sat down for a few more minutes. I went to the bathroom and came back to my desk, but was weak and tired. I ate and drank some fluids. Because it was snowing and I live 25 miles away, I accepted a ride home from a co-worker. I walked across the parking lot without problems and talked all the way home. At home, I was tired, but had a sandwich and talked on the phone. I would still describe myself as tired, but functioning.	none	Dorzolamide HCL/Timolol Maleate Ophthalmic Solution BID Sodium Chloride Ophthalmic Solution BID (10 min before other eye drops) and PRN Muro 128 (Sodium Chloride Hypertonicity Ophthalmic Ointment) @ Bedtime Prenatal Multivitamin (for

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	902795-1	"When injecting the vaccine fluid, the vaccine administrator noted about 4 drops of liquid that leaked from the area of the syringe tip / needle hub connection. This particular dose was administered by a pharmacist who has experience administering vaccines. In speaking with a few other nurses who administered COVID-19 Pfizer vaccinations at the same clinic (this was the first clinic day), the consensus was that they all did not like the syringes/needles provided by Pfizer. It was a shared opinion that they felt ""cheap"" and ""flimsy"". Going forward, our site is not going to use the Pfizer supplied syringes/needles but will be using our own syringes and needles for vaccine administration."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	902796-1	I inserted my NuvaRing birth control on 12/14/2020. I have the Covid19 vaccine on 12/15/2020 at about 8:30am. The injection site was mildly sore and that continued into the next day. I woke up on 12/16/2020 feeling a little off and it progressed throughout the day. I felt a headache that I knew was turning into a migraine, threw up a few times (this is normal for me when I get migraines), and started having hot flashes. My temperature never went above 98. After sleeping a few hours and taking some Excedrin migraine I was feeling much better, though still a little sickly, by 4pm. I really think this is due to my migraines (which I get roughly once a month) even though it was a day later than normal.	None	Methylphenidate Citalopram Buspirone Tylenol

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	902984-1	Patient stated she started to feel a burning sensation in her chest about 7 minutes after receiving injection. Lasted about 5 minutes, then left.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	902987-1	Medication error - reached the patient no harm, additional monitoring to preclude harm. A nurse (RN) diluted new vial of vaccine at 10:41 am. In the midst of adding diluent to vaccine vial, a patient arrived at our vaccine station. After drawing up and administering the 0.3 ml vaccine the RN looked at the vial again and noted that it was almost empty. She became concerned because she had just mixed a new vial and the amount of fluid remaining was not at the expected level. We immediately stopped and reported this to an employee who contacted pharmacy. We notified the patient that there was a discrepancy and had him wait for > 30 minutes to watch for any reaction. (APRN) called him at 1:30p to check on him and apprise him of the possibility of receiving higher than recommended concentration of vaccine. He stated he felt fine and felt no unusual symptoms.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	902988-1	I was tired and took a two hour nap	No	Vitamin D , Multi vitamin, fish oil, calcium

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	903471-1	10 minutes after the vaccine I had sudden cold hands (the kind of inside cold like Propofol gives you), with palpitations and dizziness. Self limited in a few minutes. BP was 150/90 which is high for me. Similar episode but shorter and less intense within next half an hour. There was also a sensation of chest awareness (not pain, but a bit of tension, which I have experienced before with anxiety and put it on anxiety). After a while decided to go home and while walking I noticed a clear sensation of chest warmth. I decided to stick around the hospital a bit more, pondering about going into the ER. DRank 2 bottles of orange juice and headed home. Then on the way home I had 2 presyncopal episodes. The fact that I had not eaten all day and wasn't well hydrated might have contributed. However, that was scary enough that I called 911. By the time they arrived I was fine. DEcided not to go to the ER. I ate some, drank some, and took Benadryl 25 mg. The chest tightness got better. I still continued to experience waves of chest warmth/heat/burning sensation and chest awareness/ tension, coming on in waves and going away in a couple of minutes. I was obviously anxious by this time but I do not believe the warmth was anxiety related. I have had anxiety before but never with this manifestation. I was tired, slept like a baby and this morning I feel at baseline. Some soreness at injection site but none of that chest warmth.	hypothyroidism (well controlled for many years) migraines	Synthroid, Zyrtec
