N/A	quinapril 40 mg 1/daily; Effient 10mg/daily; plafix 40mg/daily; atenolol 10mg/daily, aspirin 81 mg/daily; Uroci-k 10mg; Cosar 50mg/nightly; lipitor 10mg; Urociit 10mg
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	903928-1	Patient began feeling numbness/tingling in left hand. Began to feel nauseated, dizzy, flushed, and light headed. Symptoms would come in waves. Felt shaky. A few nurses and pharmacist on duty came to assess her. Heart rate was 110, SpO2 was 99. Assisted her into a wheelchair and brought her to a separate room so she could lay flat and elevate legs Checked blood pressure, 122/58. 10 minutes after reaction started heart rate had lowered to 87. Once she was laying down she did not experience any additional dizziness, flushing, or nausea. After she sat up for a couple minutes, ambulated in the hall with nurse she was released at 6:20pm and a friend drove her home.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	903929-1	-Received COVID vaccine 2:15-2:30 pm -Felt fine during 15 minute observation -Came home (about 25 minute drive) -Put on new plastic gown to help 88 yo father sit up in his hospital bed. He was clean and dry. - As I was fiddling with the blue plastic gown, I felt mild itchiness on right forearm and started scratching. -I looked at right volar forearm (supine position) and noted about 6 raised 2-4 mm blanching bumps with central darkening (like a small scab almost) - 4 below antecubital fossa, one in the actual fossa and another one immediately proximal. Mild itching, nothing distressing. -Lesions still persisting (To Dec 18). I am not scratching/taking anything for it. Lesions are visible. -No other family members (including father) with any skin rashes, no bed bugs, spouse who also lifts/cleans elderly father has no skin rashes -Evening of Dec 17 and persisting to mid day Dec 18: mild sore throat, nasal congestion, mild myalgia, fatigue, subjective fever but when took temp- no fever. Then all of a sudden, the sore throat/nasal congestion, myalgias, tiredness abated all around 3:30 pm. Skin lesions still present. -All of these symptoms were mild. -Again, skin lesions on right volar forearm persist.	None	None

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	903952-1	Headache, not feeling well, slight nausea, dry throat No treatment at this time	N/A	Skyla-JUD birth control
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	903953-1	Chills, severe headache, body ache, malaise. Recommend ibuprofen and tylenol. Testing for symptoms lasting longer than 24 hours	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	903957-1	Immediately after vaccination, pt had arm, neck and facial pain, which improved, but did not go away. Rash developed on her abdomen this evening. Recommended benadryl and close observation for anaphylaxis and medical attention if it continues to spread.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	903958-1	Severe Headache, sweating, ice and time	None	FeverFew
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	903962-1	Patient reported feeling lightheaded after vaccination around 1111AM. Patient pale in color and sweaty. Patient instructed to lay down. Feet were elevated. MD called over to assess patient. Radial pulse weak, 911 called at 1112 AM. Blood pressure assessed to be 100/76. Patient began to feel better. Water given to patient. EMS arrived to assess patient and vital were reassessed by EMS. Patient confirmed feeling better and was released from EMS care. Patient observed until husband arrived at 1155AM. Released from facility with husband.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	903963-1	Clammy, fever to 101, light headed, malaise, joint pain, fatigue	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	903964-1	I developed pain in right first MTP joint at about 8 hour. No prior h/o gout or other arthritis in that joint in past. Over the next 30 hours pain intensified and was associated with swelling, warmth, but no redness. Limited range of motion d/t pain and restricted activity as a result. No other joint issues or arthralgias, myalgias, fever, chills arm pain at injection site or any other significant symptoms. I took 3 doses of naproxen 440 mg 12 hours apart and the swelling and pain are significant ly improved at about 50-60 hours after vaccination. I researched gout as this seemed suspicious and it is reported in the literature that vaccination is a risk factor for precipitating gout attacks which I have never experienced. It never reached the point of severity that I wanted to get arthrocentesis done to prove it was gout, but since this vaccine is new I felt it was important to report my experience.	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	903965-1	Woke up at 1 AM this morning with a throbbing headache and inability to go back to sleep. The headache went away after 30 minutes, but I was still unable to sleep. I felt fine enough to go about my day as usual (working out, going to work, etc.), albeit exhausted.	n/a	n/a
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	903966-1	10 minutes after injection developed numbness and tingling in left arm and left foot. Stayed in observation an extra 15 minutes and the returned to work. Symptom persisted for the day	No current illness for this event.	Fexofenadine 24 hour 180 mg 1x/day Omeprazole 20 mg 1x/day Vitamin D3 2000IU 1x/day Tizanidine 4mg 1x/day Tylenol 650mg as needed Triamcinolone acetonide 55mcg/spray as needed
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	903969-1	Developed a migraine and became really fatigued approximately 8 hours after receiving dose and lasting about 36 hours.	none	Wellbutrin, montelukast, spironolactone, MVI, Pepcid complete, Tylenol, Excedrin, biotin

Pain is a 5 on the 1-10 pain scale Patient did not want any pain medication. She will take some when she returns home if she needs to. Denies any trouble breathing. States she feels fine, but because this is a new vaccine she wanted to report her symptom. Patient asked to wait and extra 15 minutes."	None	Vitamins - Vitamin D - Vitamin B12- Calcium- Zyrtec

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904070-1	8:10pm tongue swelling noted. 6:00am woke up with head to toe hives and migraine.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904071-1	PFizer-BioNTech COVID-19 Vaccine EUA Beginning approximately 10 minutes after the injection I felt increased anxiety and possible light headedness. This could have been anxiety about the injection and its short development and some unknowns. I felt quite stimulated through the evening on the day of vaccination and kind of tingly all over like I had too much caffeine (which I had not). The only real scary part was waking up the night of the vaccination with high anxiety, tingling, and an elevated heart rate around 100-120 bpm if I had to guess. This lasted about 1-2 hours until I was able to fall back asleep. I am now two days out from vaccination and still have increased anxiety over baseline and some diffuse tingling/hyperstimulation.	Intermittent anxiety	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904073-1	Sore arm - Tylenol temporarily relieved this symptom - continues through 12/19/2020 - milder Fatigue - Rest relieved this symptom20	None	Multivitamin, Biotin, Goli ACV
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904076-1	Immediately throat tingling (thought it was me being nervous) by an hour later started to get slight headache. By two hours I was losing my voice and exhausted, coughing, chills, dizziness. Jaw pain, throat lymph nodes swelling and painful to swallow, my knees and neck hurt to bend and move, weak and bilateral ear pain. Left work by 2pm and by the time I got home last night I was unable to breathe well and extremely chilled with no voice and extreme headache. Took Benadryl and headache medicine and went to sleep. This morning voice still gone, jaw still tender to move, headache is slightly better, congestion, chest pain and cough, still weak, lymph nodes are no longer swollen. Neck and joints still painful to move.	Was feeling a little dizzy with headache on the 12-14th of December and went in for a rapid covid test on Tuesday the 15th and resulted negative. Felt better on 16th and started menstrual cycle (which is probably why I was dizzy and had a headache on the 12-14th) got vaccinated on the 17th at 8:40am and started having jaw and throat pain right away but thought it was my nerves so by 10am my voice was becoming hoarse and I was coughing and my throat felt like I swallowed glass, very dizzy, chills, jaw pain, congestion.	Methylphenidate ER 36mg tab once daily in morning
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904077-1	PFIZER-BIONTECH CIVUD-19 VACCINE EUA, I RECEIVED ON 12/18/2020 0730AM, BY 1230PM I STARTED NOT FEELING WELL,, WITH A SLIGHT HEADACHE AND NAUSEA. Cold pack applied and patient ambulated and drank water. Five minutes later blood pressure was 137/85 mmHg and pulse was 63 beats per minute and patient continued to report waves of flushing. Patient ate a banana and another cold pack was applied. After another ten minutes patient reported feeling better but started felt lightheaded. After an additional 20 minutes blood pressure was 123/76 mmHg and pulse was 78 beats per minute. Patient stated felt much better and was discharged from clinic in stable condition.	None reported	Valacyclovir, Liletta (levonorgestrel intrauterine device, [IUD])
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904195-1	Headache, dizziness, nausea, chills, chest pain, fatigue, injection site pain. Started about 2 hours after injection. Took Tylenol. Symptoms resolved within 36 hours	None	Klonopin, Lipitor, Amitryptoline
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904197-1	Left arm soreness around injection site that started about 3 hours after the injection and remained constant until the next morning. Fever (subjective as I did not have a thermometer at home) and chills that began about 14 hours after injection and last about 4 hours. Fever and chills resolved with 1000mg Tylenol.	None	None

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904202-1	After receiving the vaccine, I waited in the facility for 15 minutes as instructed by my company and the staff who administered the vaccine. When I left and got a few miles down the road, I started to feel my heart increase and I became short of breath. My heart rate was fast and pounding. My mouth started tingling and then I started feeling the tingling on my chest and neck. I started sweating and then started to panic and called 911 because I didn't think I would make it back to the vaccination site or to the hospital in time. When the ambulance got to me I was still experiencing tachycardia, mild shortness of breath and tingling. The symptoms started to subside after approximately 20-30 minutes after they started. The paramedics assessed me and my blood pressure was 170/90 and HR was in the 120's. I declined to be sent to the hospital due to my symptoms subsiding	None	Ibuprofen, metronidazole, Zyrtec, lysine
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904204-1	I woke up with shooting pains/cramping running down the sides of my body/arms to the bottoms of my feet. It felt like a cramp but worse, kind of like nerve pain. I tried to walk it off but it persisted for about five to ten minutes. I had never felt that kind of pain before.	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904205-1	My blood pressure was 172/95 right after I took Vaccine, since then my BP was 155/100 last night , 147/101 this morning. I never had h/o high BP	none	Vitamins, fiber gummies
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904207-1	10:30 am on 12/19/2020 Fever of 100.6 F, malaise, nausea, muscle aches, increase HR to 111 at rest. Tylenol 500mg taken	PMS symptoms, hot flashes	Biotin, turmeric, centrum women, perimenopausal supplement, emergency vit c with vit d and zinc. Tylenol taken at 1030 am.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904208-1	approximately 25 minutes past receiving the COVID vaccine I felt numbness in my neck and clavicle area. This resolved on its own after about 2 hours of receiving the vaccine	Hx of medullary thyroid CA in remission	synthroid 112mcg
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904215-1	brief lightheadedness Pt arrived at observation area at 1500. Was informed she has a history of allergies in teh past so instructed patient to wait or 30 minutes in observation area. Around 1505, pt stated she was feeling lightheaded, near syncope. Advised pt to lay on ground. Vitals taken - BP 140s/90s, with HR 118, pulse ox 100%. After 5 min, pt stated she was feeling better while laying down. At 1515, vitals retaken with BP 120s/80s HR 90s. At 1520, pt sat up from floor still feeling better. At 1525 pt sat in chair feeling better and at 1530 pt stated feeling no side effects.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904216-1	Right after I got the injection I felt my right hand tingle. I assumed it was because I was squeezing it so I dismissed that. However later around 7:45 my right side of my face felt like it would if I had gotten nova Caine and was wearing off kind of tingly but my face moves fine. I then read that other hospitals stopped the injections because of something possibly like this and I did begin to worry. The sensation is not strong it is only on my right side. My face moves ok just feels like when your foot goes to sleep but very mild.	Earache	Lyrica, b-12,
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904218-1	Several minutes after the vaccine, I noticed my arm going numb. It progressed up the side of my neck and down to my fingertips. The numbness lasted over an hour. Extreme nausea vomiting and fatigue started 12 hours later. Which hasn't yet dissipated. It has now been 34 hours since vaccination.	None	Prilosec
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904219-1	Numbness and tingling in left wrist and hand lasting approximately 1 hour after injection	No current illness for this event.	Effexor, birth control
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904220-1	Numbness and tingling in left wrist and hand lasting approximately 1 hour after injection	No current illness for this event.	Effexor, birth control
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904224-1	GI symptoms, loss of appetite, fever, body aches Between 10am-2pm day following vaccination.	None	Mirena, culterelle probiotic, oil of oregano
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904229-1	Approximately 30 seconds after the injection (which was painless), I suddenly developed tachycardia and felt like my heart was pounding out of my chest. My entire body was extreme tingling and I could not feel my hands or feet. I also got a sudden strong metallic taste in my mouth. I thought I was about to fall down, but right before I was going to ask for help, the symptoms stopped as suddenly as they came on. I probably should have said something then, but I felt fine so I walked back to my unit. About 20 minutes after my injection, I then developed an intense hot flash and soaked my clothes with sweat. I sat down with cool rags on my head and this subsided after about 10 minutes. I have felt fine ever since, other than a little bit of a sore arm and mild headache (expected). I'm not sure if my tingling, heart palpitations, and hot flashes with sweating are expected, but I thought I should report it just in case it would be helpful for the manufacturer to know.	None	Levothyroxine, multivitamin, vitamin c, vitamin D3
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904232-1	high fever, chills, swollen arm, fatigue, nausea	Nothing	Certraline 50mg, once a day, Hydroxyzine 10mg 1tablet BID, Prazosin 1mg once a day
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904233-1	Fever , muscle aches, joint pain, tiredness, headache Took ibuprofen 400 mg when temp reached 38.9C	Asthma Sjogren's syndrome	Allopurinol Aspirin 81 mg Restasis eye drops Advair Fluticasone Albuterol Multivitamin Vit C
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904235-1	Reports becoming flushed shortly after covid vaccine. Then developed dizziness and was diaphoretic. Laid sown on stretcher. VS 128/84, 99/97.6, and sat 96% on room air. Observed and repeated VS x three. Was able to sit up and drink water prior to leaving observation area. Remained stable	NO	none given
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904238-1	Woke up Friday morning around 5:30am and had significant fever and chills (100.8F). In the morning fever, during the day increased heart rate. Took tylenol about 3 times a day. Felt burning up all day. Felt like I was on fire. In the evening about 6PM very nauseous, muscle aches, laying down uncovered and I felt like I was burning up. Went to bed early. No taste in the evening. This morning I feel pretty good other than no taste and a little bit of nausea.	COVID 19 tested positive sometime in 12/2020	no
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904239-1	Within 15 minutes of vaccination, developed mild headache. Was resolving when left observation area. Employee reported at 1:45 had developed right sided face and arm tingling and numbness and lips numb and tingling. Consulted with ED provider -Dr Plan to observe by Employee Health and refer to ED triage if symptoms do not improve. . Symptoms improving. Employee observed by Employee health and symptoms had resolved by 2:15 . No admission to ED	No current illness for this event.	unknown

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904304-1	Pain in the injection site, felt tired and felt feverish but normal temperature	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904306-1	Patient complained of tongue tingling/numbness and feeling of swelling at 6:58pm. No shortness of breath or other symptoms. Vitals at 7:01pm HR 89, BP 125/85, O2 98%. At 7:11pm patient still felt tongue as numb but not worsening and not other symptoms. Provided Benadryl 25mg. Patients HR 92 and O2 98. AT 7:25pm patient stated she felt fine and HR 95, O2 99. Patient released to husband to drive home.	unknown	unknown
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904308-1	I received the dose approximately 7:15pm. Within about 8 minutes of receiving the Pfizer COVID-19 vaccine I experienced pins and needles sensation on the left side of my body in my left arm and strong muscle pain in my left neck. I felt nauseous intermittently. The nurse stated that my skin looked a little blotchy on my chest. Joint pain in my left knee and left arm was intermittent as well as intermittent pins and needles sensation in my left ear and burning in my left fore arm. I felt somewhat lightheaded. This lasted for about 15-30 minutes on and off. The nurse measured my BP and oxygen saturation which were in acceptable ranges. I kept moving my arm to relieve the strong and at times painful muscle cramping sensation in my neck and massaged my neck. By about 8pm the light headedness and nausea passed enough that I could drive home. On the way home the left side of my throat felt thick and somewhat swollen but not enough to prevent me from driving or breathing in any way. At home I focused on drinking a lot of water and gently moving my arm to relieve the pins and needles sensation. After eating dinner and hydrating I felt some improvement and most pins and needles sensation and neck soreness/throat thick sensation was resolved by about 11 pm. I was able to rest fairly well through the night until 7am the next morning when pain at the injection side woke me up. Soreness at the injection site, headache, fatigue, nausea, and mild chills are what I noticed today which appears to be more typically expected from the vaccine.	none	Lessina, Spironolactone, fluoxetine, vitamin D, Vitamin B, magnesium
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904309-1	Warm flushed feeling, racing heart, dizziness that started about two minutes after injection. It dissipated after about 3-5 minutes.	None	None

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904314-1	At approximately 9pm the day of the vaccination I developed a very aggressive and pounding headache, I went to sleep at about 11pm. The headache progressed throughout the night and I could feel that I had a fever. At 5:45 the following morning I got up and checked my temperature. It was came back as 101.2°F. I took 2 tablets of 200mg ibuprofen and the headache and fever subsided in about an hour and my temperature was within normal range. For several hours I felt fine, however in the early afternoon my body felt extremely fatigued and the headache was returning and I had a few bouts of chills. At 4:30pm this afternoon (the day after vaccination), I took my temperature again and it was 100.4°F. I took 2 more 200mg tablets of ibuprofen and took a nap. Approximately 90 minutes later, I rechecked my temperature and yielded a 100.1°F fever and still had a mild headache. As of right now, at 9:30pm the day after vaccination, I no longer have a headache nor a noticeable fever, just minor fatigue.	Positive Covid-19 about 2 1/2 weeks prior to vaccination	Mens daily multi vitamin, fish oil (EPA and DHA recommended doses)

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904479-1	Injection arm very sore by 20:00 day of vaccine. Awakened with body aches at 03:00 and chilling. No fever. Went to work (frontline healthcare worker) at 08:00 but left work early (14:00) for worsening body aches moderate joint pain and increasing fatigue. Polyarthralgias and myalgias intensified as did chilling. By 10:30, abdominal pain had begun. And diarrhea had begun. The next 12 hours were continued intensity of abdominal pain (diffuse intense cramping), and severe myalgias and poly arthragias. I took additional naproxen (440mg w good 16 hours from am dosing at 07:00). I was unable to do any thing but try to rest between bouts of diarrhea. Nausea developed (moderate) but no vomiting. No fever despite intense and unrelenting chills for about 24 hours. Continued fatigue into post vaccine day 2 (12/19/20) but improved pain and resolution of GI symptoms. On 12/20, only mild polyarthralgias of hands, arms, low back, knees, feet, and hips.	None	Loratidine 10 mg daily Naproxen 440 mg q day, BID PRN
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904480-1	Patient took 50mg Benadryl prior to injection at 1300. She also took Xanax at 1000 prior to injection. Immediately following the vaccination, patient reported onset of slight headache and tingling lips. No SOB. O2 100%, HR 80.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904513-1	Approximately 20 hours after receiving, I had normally pain at the injection site. The day after receiving the vaccine I started having a dull headache, Chills, fatigue, mild nausea and vomiting once (all mild to moderate symptoms). It is tolerable and normal for most vaccines; mild enough to not seek treatment at this time. I'm expecting it to resolve in the next 48 hours. If it gets worse, I will seek treatment. I'm only reporting these side effects to help people in the future, due to it being fairly new. I will be getting my second dose if my symptoms resolve within a few days.	N/A	Adderall, Lisinopril-HCTZ, Viihryd, alprazolam, ibuprofen, fioricet, skelaxin, fish oil
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904515-1	Within 45-60 seconds of receiving the vaccine, I experienced acute-onset of tachycardia of 130-140s BPM. For context, my resting heart rate is 65-80. At first, I assumed it was anxiety, however, I had no preconceived notions or negative thoughts regarding the vaccine. I took slow, deep breaths and performed a vagal maneuver which did not lower my heart rate. I took two Claritin pills, thinking this was a mild allergic reaction. 30 seconds later, I tried to vagal again and successfully slowed down my HR to approximately 100-105 BPM. The tachycardia resolved after 10-15 minutes.	none	Escitalopram 10mg
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904517-1	Received vaccine and sat to be observed. Noted flush from chest up to head of heat and then racing heart as well as increased blood pressure. First set of vitals @ 0445 pm 97.7, bp 167/89, hr 74, r 20. Pulse felt fast but was normal per assessment. Second set of vitals @ 0458. 97.7, p68, BP 141/93, hr 92, O2 97. Pulse higher. Md saw him and stated was ok to discharge with follow up with primary care MD. Discharged at 5:10 pm.	none	unknown

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904983-1	Friday night same night of vaccine. Arm started aching and hurting. After my shower, my whole arm was in pain. Pain then moved all the way to my back. I took two tylenol, and it calmed it down. At 3 am, it started hurting really bad, I had to take a lortab - a stronger pain med at 5am that morning. Around 10am, my whole back started hurting, and that evening, it still was hurting. I ended up taking 3 lortab that day. The pain went to my neck. On Sunday, I ended up taking two lortab . All together, I took 5 lortab to ease pain from this vaccine. I was scared that I was getting another blood clot from the feeling of the pain. I am still just sore. NOTE: I am on blood thinner	No	Veratamil 180mg/day, Pravastatin 20mg/day, Lasik 40mg/day, Metoprol 25mg/day, Potassium 1/day, Eliquis 5mg 2/day
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904984-1	palpatations increased heart rate, slightly hypertensive 20 minutes after vaccination resolved on own	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904989-1	Fever, body aches, migraine, swelling/redness/warm/hard lump at injection site, nausea. Symptoms started approximately 6:00pm 12/18/20	COVID positive 11/10/20	Ibuprofen, melatonin, wellbutrin, tylenol
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904990-1	injection site pain, tiredness, severe headache, muscle pain, chills, injection site swelling, nausea, not feeling myself, difficulty breathing, fast heartbeat, dizziness and weakness in lower extremity and excruciating lower back pain. Immediately after vaccine was given, I got the side affects. Felt a little better for 2-3 hours and then it hit me hard again and lasted till the next day. Currently my arm is swollen.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904992-1	Headache	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904994-1	12/16/20- body aches, chills. congestion, stuffy, runny nose, occasional cough from drainage, fatigue 12/17/20- congestion, stuffy, runny nose, some cough and drainage.	none	none
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904995-1	Developed hives/welts on her torso, chest, arms and legs. The hives itch. Taking Benadryl and topical antihistamine lotion.	none	Birth control
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904996-1	intense arm pain, migraine, nausea & vomiting	None	Prozac, Lisinopril, Toujeo, Ozempic, Metformin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	904998-1	Pfizer-BioNTech COVID-19 vaccine EUA On Friday December 18th at 2:45 p.m. I received my first dose of the vaccine. After the injection while waiting in the observation area, I noticed my arm felt cold and felt weaker. I was able to move my hand and did not have tingling. I was cleared to leave after 15 minutes. While driving home approximately 35 minutes after the injection I had a quick onset hot flash (felt like it came from my left arm which is where I received the injection). Then my heart started pounding. I noticed my heart rate was climbing. It topped out at 170. I was having difficulty in breathing but that was related to my heart rate. I pulled over and called 911. I felt as if I was going to pass out. After 2 minutes or so my heart slowed and stayed at a rate between 120-130. I never lost consciousness. I canceled the ambulance and felt as if I could drive home. 30 minutes later the episode happened again. All the same symptoms as the first. The pounding felt harder and it was slightly harder to breath until the rate came down again. Again, I felt as if I was going to lose consciousness but never did. Each episode lasted about 2 minutes from hot flash to slower heart rate. This time the ambulance came. No rash. No hives. No swelling. BP-160/90 HR-120-130 Sinus Tachycardia on a 3 lead EKG I did not need transport to the hospital. I started feeling much better around 5:00 p.m. The coldness I felt in my arm was gone. My arm no longer felt weak. The hot flash, rapid heart rate and faint feeling did not return. I am a Paramedic with the Fire Department. Provided the Vaccine to EMS workers. I received my vaccine at the: Fire Department December 18, 2020 Injection time 2:45 p.m.	None	Amlodipine 5mg Omeprazole 20mg Pravastatin 40 mg Fish oil 1290 mg Xtend BCAA drink (7g BCAA)
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905001-1	Have swollen lymph node on right side arm pit. Got vaccine on right side of arm	no	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905005-1	The patient reported the following symptoms approximately ~24 hours after receipt of the Pfizer BioN-Tech COVID19 vaccine: tachycardia, dry mouth, and itching between the toes and behind the ears. The patient stated she took oral diphenhydramine with relief of symptoms.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905007-1	Itching began approximately 30 minutes after vaccine was administered. Itching started on the right arm and then the left arm and then the legs. Redness on the arms was noticed. Redness on the chest, but no itching on the chest.	No current illness for this event.	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905010-1	Pain at injection site. 24hrs after injection site, my left arm started hurting and painful to the touch. At 48 hours, the injection site is very raised and red. It's approximately 3inches long by 2inches wide. It's very sensitive to the touch and very hot. I went back to the medical clinic and was told to draw a circle around the site, and watch for further spreading, apply an ice pack, and submit this reaction to Vaers.	None	Zoloft, Welbutrin, Vitamin D, Vitamin B12
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905015-1	Patient reported feeling lightheaded, dizzy, tingling, itching, hot feet bilaterally, racing heart, and feeling flushed. Increased BP and heart rate were noted. This reaction lasted approx. 15 minutes.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905020-1	*Pain at injection site; 10 hours after injection; lasted 48 hours *Myalgia, primarily in shoulders; 12 hours after injection; lasted 24 hours; Ibuprofen 400 mg *Chills; 14 hours after injection; lasted lasted 15 minutes *Joint pain (hip, knee); 12 hours after injection; lasted 24 hours *Diarrhea; 72 hours after injection; lasted 6 hours; unsure if related	None	Lisinopril 20 mg Pantoprazole 40 mg Vitamin B-12 1000 mcg Vitamin D-3 125 mcg Melatonin 3 mg
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905022-1	within 12 hours: sleepiness (very), pain at injection site & around to muscles in right shoulder; slight pain in moving injected arm about 45 degrees, slight generalized muscle aches.	none	multivitamin, lion's mane, vitamin D, vitamin E, ERA; Lamictal, Klonopin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905023-1	12/16/20 awakened to an unusual headache and feeling more sluggish. Checked temp and it was 100.4. Supervisor notified and advised to get COVID testing. Throughout the day 12/16/20 temp stayed 100 and I developed body aches, arm was very tender at injection site. 12/17/20 afebrile and HA nearly resolved.	none	Hyzaar, Vit. C, D B1@ calcium low dose aspirin

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905029-1	One hour after receiving vaccine, my entire body became bright red and hot, the thick black lines on my tattoos on my right arm became so hot they felt like a burn and became raised, and the lymph nodes in my neck became swollen. My skin was hot to touch for the next 20 hours. The next 4 days I felt very lethargic. On Sunday (day 4), I developed a rash to the front of my abdomen that was in clear lines not extending to my abdomen. The rash also spread to my anterior neck. My hands also became bright red within an hour of the rash developing. This all disappeared within 2 hours. My arm was extremely sore until I woke up yesterday morning (almost like I never received the vaccine). On Sunday as well, I had diarrhea and extremely painful gas. This stopped by 1600 Sunday night. Today, Monday, I feel generally back to normal other than mild lethargy.	none	Welbutrin, junel, daily probiotic
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905034-1	Felt Flush and hot around 3 min after vaccine given. Had a slight taste change that lasted for a second. Heart rate, normal 60s, increased into the 80s.	None	Multi Vit
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905035-1	Aches, fever, large swelling in left armpit	none	Estrace, glucosamine/chondroitin, multi vitamin,cranberry,calcium,B-12,vitamin D,iron
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905037-1	Headache, dizziness, muscle aches (head, neck, shoulders). Onset 5 minutes after vaccination. Symptoms resolved within 30 minutes.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905120-1	Reported tongue tingling and increased heart rate from low 90s to 130. No airway compromise resulted and tongue tingling resolved after 1 hour.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905122-1	runny nose, chills, diarrhea, shortness of breath, HA tiredness and chest pain	none	Lorazepam
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905123-1	Symptoms started early morning hours following the shot, chills, extreme body aches, extreme headaches, fatigue to the point that it was difficult to get out of bed. The skin on certain areas of my body are very sensitive and have a tingling sensation.	None	Lisinopril, Complete Multivitamin, Tumeric, Magnesium, Fish Oil, Testosterone

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905497-1	Hello to all. Patient reported feeling dizzy right after sitting down for the 15 minute wait period. I asked her if she would like to lay down. I took her in the side room to lay on the hospital bed. Her bp was 177/115. She is a physician and so is her husband. He was with her. He suggested we had a bad cuff , and he wanted a manual one. Staff went to the ER to retrieve it. Her husband took her BP and BP was elevated with the manual cuff as well. I provided juice and water for the patient and got her rags. Her blood pressure stayed elevated for the whole 30 minutes she was there. Her husband wanted to know what I had to give her. He wanted lisinopril 5mg. I explained that we only had benadryl and epipens for allergic reactions. He decided to take her home. He stated he would give her one of his blood pressure pills and that she would be fine. She was able to get up and walk out without assistance	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905692-1	Yesterday my head felt heavy. I took swab. Started coughing 2 days after vaccine. Second day experienced swelling in arm. Runny nose. Waiting on test results. Messaged PCP and they advised her to be tested. Coughing on and off.	No	No
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905693-1	Headache; muscle and joint aches; muscle and joint aches; This is a spontaneous report from a contactable physician reporting for herself. A 44-years-old female patient received the first dose of bnt162b2 (BNT162B2, Pfizer product), intramuscular in the right arm on 15Dec2020 12:45 at hospital at single dose for immunisation. Medical history included was none. Concomitant medication included bupropion (unknown manufacturer). The patient experienced headache, muscle and joint aches on 15Dec2020 with outcome of not recovered. No treatment was performed. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient has not been tested for COVID-19. Information on the lot/batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905695-1	She is feeling dizzy, a little wonky; Feeling bad like when she is about to get the flu; Her feet feeling like gelatin; Little nausea; Headaches; This is a spontaneous report from a contactable consumer (patient). This female patient of an unspecified age received BNT162B2 (Lot number EK5730) via an unspecified route of administration on 16Dec2020 at single dose for immunisation. Relevant medical history and concomitant medications were not reported. On 16Dec2020, the patient was feeling dizzy, a little wonky, feeling bad like when she was about to get the flu, with her feet feeling like gelatin, with a little nausea and headaches. The patient reported that when she got home after the administration, she reviewed the information provided after the vaccine and she found this information in the sheet, realizing that she was feeling that way. At the time of the report, the outcome of the events was unknown.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905696-1	Felt hot, chest felt different, BP elevated	None	Bentyl, Ativan, Birth Control, Vitamin D, Fish Oil, Magnesium, Protonix
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905697-1	Diarrhea; right arm pain; fatigue; This is a spontaneous report from a contactable nurse. A 27-year-old female patient received BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine, lot number: EK5730), intramuscular at right arm on 16Dec2020 at 08:15 at single dose for immunization. The patient medical history was not reported. Concomitant medication included paracetamol (TYLENOL) for headache. On 16Dec2020 at 09:00, the patient experienced diarrhea, right arm pain and fatigue. The patient outcome of the events was recovering.	No current illness for this event.	TYLENOL
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905698-1	Starting 5 minutes from vaccination left sided arm numbness and tingling down the arm into the fingers. Felt the entire day. 12/21/20, symptoms improved but again returned today.	None	Pre natal vitamins
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905699-1	Headache; Dizzy; Front of her calves and into her feet felt a little like jello; Lightheadedness; Nausea; This is a spontaneous report from a contactable consumer reporting for herself. This 45-year-old female patient received on 16Dec2020 around 7:30am first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine, lot number: EK5730) intramuscular in the right arm for vaccination. Medical history was none. Concomitant medications were not provided. She sat there for the 15 minutes following administration of the vaccine. After that initial 15 minutes passed she had onset of side effects. On 16Dec2020, while walking to her car, she experienced what she described as dizzy, but it was more like feeling a little wonky like when you are coming down with the flu, where she did not feel right. She was ok to drive herself home, she took a shower. She worked the following night. She noted that mostly the front of her calves and into her feet felt a little like jello. She has brief moments of lightheadedness, a little bit of nausea and a tiny bit of headache starting. The room is not spinning, she is walking fine, bending over and does not seem to be struggling at all. Outcome she initially reported as having subsided, but then reported ongoing, further details unknown. Final outcome was unknown.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905700-1	I had a fever and that's all	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905701-1	After sitting and waiting the 15 minutes, I left and as I was walking, I had the strongest taste of metal in my mouth. It lasted for about a minute, then slowly went away; This is a spontaneous report from a contactable consumer. A 54-year-old female patient received first dose of bnt162b2 (BNT162B2; lot EK5730), via an unspecified route of administration on 16Dec2020, at 11:00 AM at single dose (right arm) for immunization. Medical history included asthma, hypertension (HTN), and allergies penicillin (PCN), medications, food or other products, many seasonal items, grass, trees, molds, dust mites, carrots, apples, celery, and walnuts. The patient did not received any other vaccines within four weeks prior to Covid vaccine. Concomitant medications were not reported. Patient reported that she had other medications received within 2 weeks of vaccination. On 16Dec2020, at 11:15 AM, after sitting and waiting the 15 minutes, the patient left and as she was walking, she had the strongest taste of metal in her mouth. It lasted for about a minute, then slowly went away. There was no treatment for the event. The patient did not have Covid prior the vaccination and was not Covid tested post vaccination. Outcome of event was recovered on 16Dec2020.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905703-1	felt very warm, overheated; clammy; started feeling slightly light headed; Thought I would pass out; This is a spontaneous report from a contactable consumer (patient). A 41-year-old female patient received the first dose of bnt162b2 (BNT162B2; lot:eh9899) via an unspecified route of administration in the left arm on 16Dec2020 10:00 at a single dose for immunization. Medical history was reported as none. Concomitant medication included paracetamol (TYLENOL) for an unspecified indication. On 16Dec2020 11:30, the patient started feeling slightly light headed and thought she was going to pass out. On 16Dec2020 11:50, she felt very warm, overheated and clammy. The patient sat down, attempted to eat her lunch and the events slowly subsided. The patient's blood pressure and pulse were checked on 16Dec2020 and they were relatively normal. The events were reported as non-serious and the patient did not receive treatment for the reported events. Outcome of the events was recovering.	No current illness for this event.	TYLENOL

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905709-1	a fever of 99.5; body chills/chills; Not feeling well; Body itch; Pain; This is a spontaneous report from a Pfizer-sponsored program, received from a contactable healthcare professional (patient). A 36-year-old male patient received BNT162B2 (lot number: not provided) solution for injection, via an unspecified route of administration on 15Dec2020 at a single dose for an unspecified indication. Patient has no medical history. There were no concomitant medications. The patient reported having a fever of 99.5 and body chills/chills after getting the Covid vaccine yesterday (15Dec2020). This was the first dose. The patient reported he was not feeling well, he had body itch, and pain on 15Dec2020. Patient stated he was just trying to think, he actually was feeling like drinking a lot of water and probably have some Tylenol. He asked if he should have the Tylenol or not really. The reason he was calling was because he was trying to figure out what was going on with his system before he do whole 8 to 10 minutes thing. He asked if this was required to find out if he could just drink some water and just take the Tylenol. He just wants the answer before he goes any further. Patient reported he was taking Tylenol for fever and chills. He reported he was in pain and he just needed to see if everything was alright. Outcome of the events was unknown. Information on the lot/batch number has been requested.	No current illness for this event.	No other medications for this event.

The patient's medical history and concomitant medications were not reported. The patient experienced minor soreness after his injection on an unspecified date. Outcome of the event was unknown. No follow-up attempts are possible. Information about lot/batch number cannot be obtained. No further information is expected.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905726-1	"hives on my neck and above my ear/few sparse hives; This is a spontaneous report from a contactable nurse (patient). A 49-year-old female patient received bnt162b2 (BNT162B2) lot number and expiration date were not reported, via an unspecified route of administration on 16Dec2020 at 07:15, 0.3 ml single dose for immunization. Medical history included seasonal allergy and seasonal asthma. The patient's concomitant medications were not reported. The patient stated that she received the product this morning (16Dec2020) at 0715. She mentioned that she took a shower this evening, 13 hours later, and observed hives on her neck and above her ear. She confirmed that she was not having an anaphylaxis and there are no other symptoms. She also denied any soreness at the injection site or pain. She stated that she has no other symptoms and no pain, no soreness. She added that she received vaccine on 16Dec2020 and wondered if there was a side effect of some hives, she meant that she was not having an allergic reaction and she got the vaccine at 7:15 this morning and she have been fine, but she just have like a few sparse hives at 20:30. When asked about causality, the nurse stated ""Yes I do. I have never had hives before."" She did not think that she needed treatment but she was wondering if it was common or she wasn't having any anaphylactic reaction and they were sparse. She doesn't have it on her trunk, she just have some on her neck and there was like one above her ear. She put BENADRYL cream on them, they are fine, and they don't itch. She was just like preemptively treating them because of her high risk for work. Therapeutic measures were taken as a result of hives on my neck and above my ear (urticaria). The outcome of the event was unknown. Information on the lot/batch number has been requested."	No current illness for this event.	No other medications for this event.

Information on the lot/batch number has been requested"	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905732-1	"both her hands were feeling pressure in her knuckles; redness in her hands; Itching; feeling headachy; feeling fluish; This is a spontaneous report from a contactable nurse. A 61-year-old female patient received the first dose of bnt162b2 (BNT162B2; lot number EK5730), intramuscularly in the right upper arm on 16Dec2020 at 15:40 at 61-years-old at a single dose for COVID-19 immunization. The vaccination facility was a hospital. There were no additional vaccines administered on the same date of the Pfizer suspect or prior vaccinations within 4 weeks. Medical history included ongoing asthma (asthma began sometime in her 50s and was ongoing) from an unspecified date. The patient had no other adverse events to any other vaccines in the past and there was no relevant family medical history. There were no concomitant medications. On 16Dec2020, the patient experienced: both her hands were feeling pressure in her knuckles, redness in her hands, itching. On an unspecified date in Dec2020, the patient experienced feeling headachy, feeling fluish. There was no visit to an emergency room or physician office. The clinical course was reported as follows: The patient was a nurse and she had a Pfizer lot number EK5730. The patient said she got the shot on 16Dec2020 at about 15:40 and when she got home both her hands were feeling pressure in her knuckles and they were red. Since then she had not stopped itching. The patient took cetirizine hydrochloride (ZVRTEC) and that made it stop enough; however, she could sleep but she still felt like she was itching all over. The patient clarified the pressure in her hands was primarily in her knuckles and then once that resolved she went to itching and feeling headachy. The patient clarified the redness was on her hands when she was having the pressure, her hands kind of got red. The patient reported the pressure in her knuckles had resolved completely and the redness in her hands and knuckles had resolved as well. The patient reported the itching began about an hour and a half after the injection and was ongoing, but it was not as bad since taking cetirizine hydrochloride twice. The patient reported the itching had improved. The patient did not have the NDC or expiration date. The patient did not know what dose was given. The card was all she had, and it just had the lot number and was to remind her to return for the next shot. The patient was calling Pfizer primarily about the itching and how she was feeling kind of ""fluish"", which she assumed was normal. The patient wanted to know, should she get the second shot, would she have a worse reaction to the second one. The patient needed to know because she was ""miserable itching so bad and she thought the second one could be worse than the first."" There was no relevant testing. Therapeutic measures were taken as a result of both her hands were feeling pressure in her knuckles, redness in her hands, and itching The clinical outcome of the events: both her hands were feeling pressure in her knuckles, redness in her hands, was recovered on an unspecified date. The clinical outcome of the event, itching, was recovering. The clinical outcome of the event, feeling headachy and feeling fluish, was unknown."	Asthma (asthma began sometime in her 50s and was ongoing)	No other medications for this event.

No current illness for this event.	CRESTOR;
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905777-1	On 12/20/2020 I received the Pfizer covid vaccine at 3pm and 10 minutes after vaccine, felt tingling and a heavy sensation on my right eye. Was seen in ER at same facility. Per MD, no facial asymmetry noted and was sent home. On 12/21/2020, I woke up with mild right facial numbness and sensation of heaviness and very subtle right labial drooping. When closing my eyes tight felt the muscles of my right eye were mildly weaker but I was able to close my eye. I presented to the ER. Blood work normal and per MD, did not feel the need for steroids and told to monitor at home. Since then, the sensation on my right cheek is slightly better, my eye still bothering me slightly and the numbness still present but a bit less.	None	Vitamin D, C, and zinc
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905778-1	random metallic smell; This is a spontaneous report from a contactable physician (patient herself). A female patient of an unspecified age received bnt162b2 (lot number: EK5730; Expiration date: 31Mar2021), via an unspecified route of administration on 17Dec2020 at single dose for immunisation. The patient's medical history and concomitant medications were not reported. About a half hour later, the patient experienced random metallic smell on 17Dec2020. The outcome of event was unknown.	No current illness for this event.	No other medications for this event.

Medical history was reported as none. The patient's concomitant medications were not reported. The patient experienced tiredness on an unspecified date following administration of bnt162b2 vaccine. Outcome of the event recovered on an unspecified date No follow-up attempts are possible; information about lot/batch number cannot be obtained.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905789-1	Felt like I had covid. Headache, nausea, light headed, hot and could not cool down. Overall tried. This was the next day after receiving vaccine.	I had covid end of October	Prozac
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905791-1	Sore arm after injection; This is a spontaneous report from a non-contactable pharmacist received via a Pfizer sales representative. A 32-year-old female patient received BNT162B2 (solution for injection, lot number/expiration date unknown) via an unspecified route of administration on her arm in Dec2020 at a single dose for immunisation. Medical history and concomitant medications were not reported. The patient experienced sore arm after injection in Dec2020. The outcome of the event was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905794-1	Swollen, painful right armpit. It was present Sunday 12/20/2020 when I woke up. It has not reduced or improved over 24 hours.	None	Zoloft Whey protein
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905795-1	Nausea was first noted followed by a sudden tachycardia with pulse in the upper 130's. With this my tongue and mouth began to tingle and it felt like I had something stuck in my throat. The facility gave me liquid benadryl immediately (50mg). Symptoms began to improve over the hour and a half that I was monitored and had fully resolved 3 hours post injection.	None	Clonidine, Lyrica, oxycodone, oxycontin, colace, zofran
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905796-1	"feel lightheaded; I have a bright red, itchy, raised and warm welt at the injection site as well; Pain and itching at the injections site immediately; Pain and itching at the injections site immediately; Throat tightness across the front; Tongue began to tingle, felt a little ""fat"" and then went numb for approximately 3-5 minutes; Swallowing feels like a ""lump"" in my throat, but does feel obstructed; I have a bright red, itchy, raised and warm welt at the injection site as well. This is a spontaneous report from a contactable Nurse who reported for herself. A 51-years-old female patient received the first dose of bnt162b2 (BNT162B2, lot number EK5730), intramuscular in the left arm at hospital on 17Dec2020 09:45 at single dose for immunisation. The patient medical history and concomitant medications were not reported. The patient previously took bacitracin zinc, neomycin sulfate, polymyxin b sulfate (NEOSPORIN) and experienced rash. The patient experienced pain and itching at the injections site on 17Dec2020 at 09:45 (reported as immediately), lasted approximately 3 hours (as reported), the final outcome was recovering (as reported). Throat tightness across the front, but not ""inside."" Tongue began to tingle, felt a little ""fat"" and then went numb for approximately 3-5 minutes. Swallowing felt like a ""lump"" in her throat, but did feel obstructed. Ate lunch without difficulty. Drinking without difficulty. The front of her throat, distal from jawline, to top of breast-line felt like she had a very light weight resting on it, even 8 hours post injection. Approximately 30 minutes after injection, the patient began to feel lightheaded. Lightheadedness became more intermittent for the next 4 hours and resolved. She had a bright red, itchy, raised and warm welt at the injection site as well, 8 hours later, on 17Dec2020. The patient did not receive any treatment for the events. The outcome for the event lightheaded was recovered, for the other events was recovering. Prior to vaccination the patient was not diagnosed with COVID-19 and has not been tested for COVID-19.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate."	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905805-1	<p>"Date: 12/21/2020 4 Subjective Patient is a 33 y.o. female who was seen at COVID Vaccine Clinic today for her first dose of the COVID 19 vaccination. 4 She denied any history of previous adverse reactions to vaccines. 4 She was given the Pfizer vaccination in the left deltoid muscle. 4 During her 15 minute waiting period after the injection, the patient began to experience feelings of hypoglycemia. She checked her blood glucose with her own monitor and had 77 at 1104. She chewed 1 glucose tab that she had in her purse. She noted some difficulty with swallowing it and notified clinic staff. Associated dizziness and was escorted by clinic staff to the emergency bay. 4 This provider was notified of patient reaction and she was then assessed in the emergency bay area. She denied difficulty breathing and chest pain, history of adverse reactions with prior vaccinations or allergies to medications with the exception of spironolactone. 4 Patient had already been given a bottle of water by clinic staff and reported that the glucose tablet went down easier following the water. She took a second glucose tab sometime before 1113. She rechecked her sugar and had slight increase of 79. She did eat breakfast this morning about 0800 and had a protein bar right before her arrival today. 4 Monitored patient for severe reaction symptoms, including rapid progression of symptoms, respiratory distress with dyspnea and increased work of breathing, vomiting, abdominal pain, hypotension and chest pain. 4 Review of Systems HENT: Positive for trouble swallowing. Negative for facial swelling, hearing loss, rhinorrhea and voice change. Eyes: Negative for redness. Respiratory: Negative for cough, chest tightness and shortness of breath. Cardiovascular: Negative for chest pain. Skin: Negative for color change, pallor and rash. Neurological: Positive for dizziness. Negative for syncope and speech difficulty. Psychiatric/Behavioral: Negative for agitation and confusion. The patient is not nervous/anxious. 4 Objective Vitals There were no vitals filled for this visit. 4 4 Physical Exam Constitutional: General: She is not in acute distress. HENT: Head: Normocephalic and atraumatic. Nose: No rhinorrhea. Cardiovascular: Rate and Rhythm: Normal rate and regular rhythm. Pulmonary: Effort: Pulmonary effort is normal. No respiratory distress. Skin: General: Skin is warm and dry. Coloration: Skin is not pale. Findings: No rash. Neurological: Motor: No weakness. Psychiatric: Mood and Affect: Mood normal. Behavior: Behavior normal. 4 4 4 Assessment/Plan Patient is a 33-year-old female who has a 15-year history of type 2 diabetes, and experienced a hypoglycemic event without complaint of chest pain or shortness of breath. 4 Vital signs obtained at 1105 with blood pressure within normal limits at 132/88, heart rate 83 and 98% O2 saturation on room air. Patient continued to compensate appropriately and reported feeling slightly better. Glucose checks repeated by patient at 1117 was 84, vital signs were blood pressure 116/80, heart rate 89, O2 saturation of 98% on room air. She continues to deny chest pain, shortness of breath or difficulty swallowing at this time. 4 At 1117 a 10 mg cetirizine was administered by mouth. Patient was able to swallow this with a small sip of water without any difficulty. 4 1121, patient continues to deny chest pain or shortness of breath. She continues to be compensating appropriately and sitting at the edge of the bed. She states that she is feeling better. 4 Vital signs obtained at 1123 with blood glucose per the patient's own meter, continuing to elevate at 103, blood pressure within normal limits at 116/91, heart rate at 85 and 100% O2 saturation on room air. 4 At 1126, the patient continues to feel better. She is provided a granola bar to eat. She does note feeling sleepy though attributes this to this being the first day she has had off after working 4 days last week. She notes that she has been sleepy even prior to her arrival at the vaccine clinic today. She is able to eat the granola bar and continues conversing appropriately without difficulty. She continues taking small sips of water without issues. Continues to deny chest pain or shortness of breath. Blood sugar is rechecked at 1138 and continues to elevate to 116. She reports that her meter says her sugar is ""stable."" 4 Final set of vital signs obtained at 1138 revealed blood glucose within normal limits at 116, blood pressure of 119/84, heart rate 83 and 100% O2 sats on room air. Patient denied complaints of chest pain, shortness of air, nausea, dizziness or blurred vision at this time. She felt much improved and we discussed her leaving the clinic and heading home to have lunch. She had no further complaints. She was able to rise to standing on her own without any further issues and ambulated out of the clinic without difficulty. 4 She was advised with strict return precautions should she develop chest pain or shortness of breath to present to the ED or call 911. She expressed understanding of this. 4 LPN, RN, PharmD present through this encounter and assisted as asked of the, by this provider. 4 Follow up response to treatment:excellent. 4 Patient discharge: Stable to go home and follow up with PCP. 4 Orders Placed This Encounter Procedures ? COVID-19 MRNA LNP-S PF 4 PA-C Electronically Signed 12/21/2020 11:17 AM 4"</p>	No current illness for this event.	No other medications for this event.

Took 800 Ibuprofen 1 hour later that pain stopped and massive headache. Headache was followed by drunken type vertigo. I took 20mg steroid, Benadryl, Afrin, Albuterol. Two hours later better but still had vertigo. By 4am symptoms light enough to do light work out, legs felt fatigued. Today no symptoms.	Seasonal Allergies	Nothing
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905811-1	Injection site pain; myalgia; arthralgia; congestion; neck pain; fatigue; This is a spontaneous report from a contactable consumer (patient). A 62-year-old male patient received first dose of bnt162b2 (lot number EK5730), via an unspecified route of administration in arm left on 16Dec2020 07:15 at single dose for immunization. Medical history included hypertension and CAD (coronary artery disease). Patient had no allergy history to medications, food, or other products. Concomitant medication included ticagrelor (BRILINTA), lisinopril, acetylsalicylic acid (ASA), ergocalciferol (VIT D) and magnesium (MAGNESIUM). Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient experienced injection site pain, myalgia, arthralgia, congestion, neck pain, fatigue all on 16Dec2020 20:00. Treatment paracetamol (TYLENOL) were taken as a result of reported events. The outcome of the events was recovering.	No current illness for this event.	BRILINTA; ; ASA; VIT D;
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905812-1	Left arm feels swollen - resolved on own.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905813-1	Developed numbness and tingling to face, forehead and lips about 45 minutes after administration. Everything but nose resolved in 5-10 minutes but nose remained feeling numb - had some sensation but not normal. 2 1/2 hrs later felt like it was continuing to improve, but not normal yet.	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905816-1	About 5-7 minutes after the injection, I was sitting in the waiting area for my 15 minutes observation period. After about 5-7 minutes I noticed that it was hard for me to swallow and I became really flushed and hot and tachycardia. I was not anxious or upset about getting the shot. I am actually an ER physician and have had lots of shots in my life without any adverse reaction. The flushing and tachycardia resolved after about 20 minutes but the sensation of difficulty swallowing did not subside completely until I took dose of Benadryl 50mg orally. Symptoms resolved after about 1 hour post Benadryl. I also had a recurrence of symptoms the next day at around 24 hours where I felt again like I couldn't swallow, so I took Benadryl 50mg again, but this time I also had some numbness of the left side of my tongue and the left side of my face. The abnormal sensation in the left side of my face subsided over about an hour or so.	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905817-1	lots of pain on the site radiating from shoulder to hands; lots of pain on the site radiating from shoulder to hands; lots of pain on the site radiating from shoulder to hands; swelling; This is a spontaneous report from a contactable consumer. A male patient of an unspecified age received bnt162b2, via an unspecified route of administration on an unspecified date at single dose for immunization. The patient's medical history and concomitant medications were not reported. The patient experienced lots of pain on the site radiating from shoulder to hands and swelling on an unspecified date. The outcome of event was unknown. Information on the Lot/Batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905818-1	headache; dizzy; ringing in her ears for hours -high pitched ring; sore arm where injection was administered; This is a spontaneous report from a contactable nurse (patient). A 28-year-old female patient (not pregnant) received first dose of bnt162b2 via intramuscular in arm right on 17Dec2020 11:30 at single dose for immunization. The patient medical history was not reported. The patient had no medications, food, or other products allergy history. The patient's concomitant medications were not reported. The patient reported 8 hours after administration of vaccine, on 17Dec2020 8:00 pm, the patient started to get a headache then dizzy then ringing in her ears for hours -high pitched ring, and sore arm where injection was administered. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. No treatment was received in response for reported events. The outcome of the events was recovering. Information on the lot/Batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	905819-1	"complained of ""chest tightness"" after receiving the vaccine; being nervous; This is a spontaneous report from contactable Pharmacist. A patient of unspecified age and gender received bnt162b2 (Pfizer-BioNTech COVID-19 Vaccine) via an unspecified route of administration in 2020 at single dose for immunization. The patient's medical history and concomitant medications were not reported. The patient (healthcare worker) received the Pfizer-BioNTech COVID-19 vaccine in 2020 and complained of chest tightness after receiving the vaccine. Chest tightness resolved quickly and the patient attributed it to being nervous. No medical interventions were received and the patient left the observation area without issue. The outcome of the events was resolved in 2020. Information about lot/batch number has been requested."	No current illness for this event.	No other medications for this event.

A female patient of an unspecified age received BNT162B2, via an unspecified route of administration, on 16Dec2020 at 12:00 PM at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On 17Dec2020, at around 1:00 in the morning, the patient started feeling weak, dizzy and even blacked out a couple times. The outcome of the events was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events feeling weak, dizzy and blacked out, there is a reasonable possibility that the events are related to BNT162 vaccine. The case will be reassessed upon receipt of follow up information.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906121-1	Severe fatigue until 48 hours; severe headache still present; fever; chills; nausea; This is a spontaneous report from a contactable physician. A 30-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), intramuscularly in the left arm, on 15Dec2020 at 15:15 (at the age of 30-years-old) at a single dose for COVID-19 immunization. The patient had no medical history or concomitant medications; there were no other medications the patient received within 2 weeks of the vaccination. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient had no known allergies to medications, food, or other products. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient experienced severe fatigue until 48 hours, severe headache still present, fever, chills, and nausea on 16Dec2020 at 03:00. The events were reported as non-serious. No therapeutic measures were taken as a result of the events. The clinical outcome of severe fatigue until 48 hours, severe headache still present, fever, chills, and nausea was not recovered. It was also reported that since the vaccination, the patient had not been tested for COVID-19. The batch/lot number for the vaccine, BNT162B2, was not provided and was requested during follow up.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906122-1	Hives; This is a spontaneous report from a contactable consumer. A 43-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: GH9899), via an unspecified route of administration in the left arm, on 17Dec2020 at 09:00 (at the age of 43-years-old) at a single dose for COVID-19 immunization. Medical history included allergic to unknown food. The patient's concomitant medications were not reported. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient experienced hives on 17Dec2020 at 16:00. The event was reported as non-serious and did not cause/prolong hospitalization. Therapeutic measures were taken as a result of the event, which included treatment with diphenhydramine hydrochloride (BENADRYL). The clinical outcome of hives was recovering. It was also reported that since the vaccination, the patient had not been tested for COVID-19. The batch/lot number for the vaccine, BNT162B2, was not provided and has been requested during follow up.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906125-1	Hearing loss; Severe tinnitus; This is a spontaneous report from a contactable pharmacist. A male patient of an unspecified age received first dose of BNT162B2 (solution for injection, lot number: EK5730, Expiry Date: 31Mar2021, NDC number: 59267-1000-01), intramuscularly on 16Dec2020 at 0.3 mg, single in deltoid for prevention of COVID viral infection. The patient's medical history and concomitant medications were not reported. The patient's wife is COVID positive, but he has not been tested and has no other symptoms. On 17Dec2020, the patient experienced hearing loss, and severe tinnitus. There is no additional vaccines administered on same date of the Pfizer suspect. The outcome of both events was not resolved; Sender's Comments: The reported information is limited. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906127-1	severe hypersensitivity; swelling of tongue; dyspnea; skin rash; This is a spontaneous report from a non-contactable consumer. A 35-year-old male patient received BNT162B2 (Pfizer-BioNTech COVID-19 vaccine), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient administered vaccine and developed swelling of tongue, dyspnea, skin rash on an unspecified date. There is a report of severe hypersensitivity for his awareness. The patient was treated with dexamethasone, Benadryl, IM epinephrine in ER. Outcome of events were unknown. No follow-up attempts are possible; information about batch/lot number cannot be obtained.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906128-1	Bilateral itchy rash, mostly with small areas of erythema especially around arm pits, but also on abdomen, back, neck, arms, forearms, thighs, legs; Bilateral itchy rash, mostly with small areas of erythema especially around arm pits, but also on abdomen, back, neck, arms, forearms, thighs, legs; some less erythematous areas of swelling with well-marked borders at most 1cm in diameter; This is a spontaneous report from a contactable physician. A 28-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), intramuscularly, on 15Dec2020 at 02:45 (at the age of 28-years-old) at a single dose for COVID-19 immunization. Medical history included hypertension (HTN). Prior to the vaccination, the patient was not diagnosed with COVID-19. Concomitant medications, taken within two weeks of vaccination, included lisinopril (MANUFACTURER UNKNOWN), melatonin (MANUFACTURER UNKNOWN), and vitamin D (MANUFACTURER UNKNOWN) taken for supplement. The patient had no known allergies to medications, food, or other products. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient experienced bilateral itchy rash, mostly with small areas of erythema especially around arm pits, but also on abdomen, back, neck, arms, forearms, thighs, legs and some less erythematous areas of swelling with well-marked borders at most 1cm in diameter on 16Dec2020 at 08:00. The events did not cause or prolong hospitalization. Therapeutic measures were taken as a result of the events, which included treatment with diphenhydramine hydrochloride (BENADRYL) and loratadine (CLARITIN). The events improved with loratadine but started to reoccur 18 hours after loratadine use. The clinical outcome of bilateral itchy rash, mostly with small areas of erythema especially around arm pits, but also on abdomen, back, neck, arms, forearms, thighs, legs and some less erythematous areas of swelling with well-marked borders at most 1cm in diameter was not recovered. It was also reported that since the vaccination, the patient had not been tested for COVID-19. The batch/lot number for the vaccine, BNT162B2, was not provided and has been requested during follow up.	No current illness for this event.	; ; VITAMIN D [VITAMIN D NOS]
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906129-1	extreme pain in her arms feeling like they are dead and heavy; extreme pain in her arms feeling like they are dead and heavy; She was unable to continue working; This is a spontaneous report from a non-contactable other health professional via Pfizer Sales Representative. This other health professional reported for a 50-year-old female patient (nurse) received BNT162B2 (Pfizer-BioNTech COVID-19 vaccine), via an unspecified route of administration at on 15Dec2020 at single dose for COVID Vaccine. The patient's medical history and concomitant medications were not reported. Nurse was administered the Pfizer COVID Vaccine on 15Dec2020. On 17Dec2020, at work she complained about extreme pain in her arms feeling like they are dead and heavy. She was unable to continue working and went home. Event took place after use of product. Outcome of events were unknown. No follow-up attempts are possible; Information about batch/lot number cannot be obtained. No further information is expected; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, extreme pain in her arms, feeling like they are dead and heavy and unable to continue working, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906133-1	Some mild nausea; This is a spontaneous report from a contactable consumer. A male patient of an unspecified age received BNT162B2, via an unspecified route of administration on 16Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced some mild nausea on 16Dec2020. The reporter indicated that the patient had some mild nausea that lasted for an hour or two but that it had completely passed. The outcome of some mild nausea was recovered in Dec2020. No follow-up attempts are possible; information about batch/lot number cannot be obtained.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906270-1	patient has a history of minor allergic reactions. She developed some difficulty swallowing and tightness in throat. She was not in distress and requested oral benadryl as this has worked for her in the past. Vitals monitored, benadry given 50MG PO. Patient improved over 45 minutes. Returned to work with instructions to report to ER if symptoms return.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906271-1	Headache	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906273-1	After about 10 min, she noted numbness and tingling in the 4th and 5th digits of the hand on the side where the injection was given. She felt SOB and like she might pass out though admits this may be from anxiety. She remained in the vaccine waiting area for 45 minutes, she notified staff and was provided something to drink. She was eventually dismissed and returned to work where she completed her scheduled shift on Med Surg. On Friday, she felt numbness and tingling in both hands, both feet, and her face intermittently that persisted into Saturday. On Sunday she noted swelling in both hands to the point that she could not put her rings on. The numbness and tingling was improved in hands and face but persisted in her feet. Monday she reported that swelling is improved but still present, and there is still slight tingling in her hands. She also notes that she has been fatigued since receiving the vaccine. She had injection site pain and some generalized muscle achiness for about 36 hours after receiving the vaccine, but that has resolved. Today (Tuesday) she reports continued sensation of mild swelling in hands, reporting that they feel tight. Otherwise symptoms appear to be resolving.	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906274-1	A little bit of arm and neck pain still. Today I am feeling great.	No	Probiotic, Zyrtec
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906275-1	Pt. received part one covid vaccine on 12/15 at 4:30 pm. The next morning at 10:30 when she woke up, she had moderate facial swelling and redness. (No rash, no GI discomfort, no difficulty breathing) Pt. took Benadryl, Zyrtec, and iced face. The following day it resolved after another dose of Benadryl.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906278-1	12/19 - onset of abdominal pain which is like her usual chronic necrotizing pancreatitis which she has had off and on for 10 years. This was accompanied by nausea. The pain & nausea last for about 3 hours. 12/20 - nausea and diarrhea. Today 12/21 she reports that she has recurrence of the abdominal pain, nausea, and feels hot. She is at work today. Advised to contact her physician for assessment and treatment as needed. Will follow-up with her	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906281-1	Had vaccine shot on Saturday 12/19/20. Slight tingling/numbness in cheek and upper jaw for 45 minutes on Sunday 12/20/20.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906283-1	DEVELOPED LEFT LOWER EXTREMITY WEAKNESS for 72 hours post vaccination. Loss of sensation in left foot continues.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906284-1	12/16 vaccine date 12/16 - fatigue, H/A, low grade fever 12/17 - fatigue, body aches, moderate headache 12/18 - resolution of all symptoms	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906286-1	"12/18 - developed headache and nausea. 12/19 - developed fever and fatigue and cough. 12/20 - temp to 100.7 with cough and some body aches. 12/21 - feels the same as 12/21 but with bad headache and fatigue. She is taking TYLENOL and ibuprofen for the symptoms. She feels she's the same today as she was yesterday. She stayed home from work 12/21. Because of her prolonged symptoms and fever with cough - a COVID-19 PCR nasopharyngeal swab test was performed. This came back as "DETECTED" on 12/21."	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906302-1	Felt fine after vaccine. Approximately 9 pm, I went to bed and began experiencing paresthesia in right arm, then noticed the paresthesia in both hands, both feed and also in right leg. The following morning, was primarily in my hands. I went to work, and as the day progressed, noticed in my feet, and right leg again, but hands not right arm. On Sunday & Monday, the paresthesia was more intermittent with timing lengthening between bouts. Monday, I went out in my car, and noticed that the paresthesia was worse in my right foot, Mid plantar to toes, Couldn't feel the gas pedal with right right foot. No paresthesia in left foot, left hand. Also noticed besides not feeling well, that I felt like was in mental fog, unable to articulate some things. That was intermittent, also (have had poor appetite for @ least a week prior to vaccine). This morning (Tuesday) I have paresthesia from my right shoulder down to fingers, and continue with right foot from mid plantar to toes. Mentally feel a little bit better, not as foggy.	none	Synthroid 125 mcg daily (name brand), multi vitamin, vitamin D supplement 4,000IU, Emergency C supplement, melatonin 5mg nightly, st. john's wart 300 mg daily.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906619-1	Intermittent tachycardia; headache; left shoulder pain, increases when lifting elbow above pectoral; This is a spontaneous report from a contactable nurse, the patient. A 30-year-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EK5730), intramuscular in the left arm on 16Dec2020 at 16:45 (at the age of 30-years-old) as a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient previously took amoxicillin (MANUFACTURER UNKNOWN) from an unknown date to an unknown date for an unknown indication and experienced drug allergy. On 16Dec2020 at 21:45, the patient experienced intermittent tachycardia, headache, and left shoulder pain (which increased when lifting elbow above pectoral). Therapeutic measures were taken as a result of the intermittent tachycardia, headache, and left shoulder pain and included treatment (self-medicated) with acetaminophen (TYLENOL) and diphenhydramine hydrochloride (BENADRYL). The clinical outcomes of intermittent tachycardia, headache, and left shoulder pain were unknown. It was also reported that since the vaccination, the patient had not been tested for COVID-19.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906620-1	Patient felt lightheaded & dizzy 10 minutes after receiving vaccine. Layed down flat with feet elevated for 10-15 minutes.	unknown	unknown
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906621-1	feeling clammy; made it harder to breathe; tightness in her chest and throat; tightness in her chest and throat; blood pressure of 130/100, and she was reportedly normotensive usually; This is a spontaneous report from a contactable pharmacist. A 41-year-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EH9899), intramuscular in the left arm on 17Dec2020 at 08:00 (at the age of 41-years-old) as a single dose for COVID-19 immunization. Medical history included anxiety from an unknown date and unknown if ongoing. The patient did not have any allergies to medications, food, or other products. It was unknown if the patient was diagnosed with COVID-19 prior to vaccination. Concomitant medications included sertraline (MANUFACTURER UNKNOWN), zolpidem (MANUFACTURER UNKNOWN), ibuprofen (MANUFACTURER UNKNOWN), and ethinylestradiol/norethisterone acetate (LOESTRIN); all for unknown indications from unknown dates and unknown if ongoing. The patient did not receive any other vaccines within four weeks prior to the vaccination. On 17Dec2020 at 08:30, the patient reported feeling clammy with a tightness in her chest and throat that made it harder to breathe and elevated blood pressure. She had left the vaccine clinic and was on her way home at symptom onset, and she returned immediately. At the clinic, she was given diphenhydramine (MANUFACTURER UNKNOWN) 25mg orally and her blood pressure was periodically monitored. At onset, she had a blood pressure of 130/100, and she was reportedly normotensive usually. The patient was monitored for 30-45 minutes. The clinical outcomes of feeling clammy, tightness in her chest and throat, and hard to breathe was recovered on 17Dec2020; while the outcome of elevated blood pressure was unknown. It was also reported that since the vaccination, the patient had not been tested for COVID-19.	No current illness for this event.	;;; LOESTRIN
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906624-1	"feeling ""Sort of dizzy""; arm is sore; just doesn't feel well; This is a spontaneous report from a contactable consumer (patient). A 61-year-old female patient started to receive bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via an unspecified route of administration on her left upper arm on 17Dec2020 13:25 at a single dose for covid-19 prevention. The patient's medical history included blood pressure abnormal. Concomitant medications included blood pressure medicine at night. The patient went to the hospital today where she works, to have a vaccine for COVID, and then she drove herself home. After she got home, she decided to rest a bit before her shift at work tonight, she laid down for a little while, and she started feeling sort of dizzy and her arm was sore. She just doesn't feel well. She does not feel like she needs to go to the hospital or anything, but she may need rest. Patient was wondering if these are known side effects of the product. She started feeling the side effects maybe 20 or 25 minutes after getting the vaccine and after she had left the hospital. She was just thinking at the time that it was okay and maybe she just needed rest. She takes blood pressure medicine at night, but she does not think that has anything to do with how she is feeling. Outcome of the events was unknown."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906626-1	She noticed that she got breakthrough bleeding, when she just got her menstruation last week; This is a spontaneous report from a contactable healthcare professional, the patient. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), via an unspecified route of administration on 16Dec2020 at 17:00 as a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On an unknown date in Dec2020, the patient noticed that she had breakthrough bleeding and she just had her period last week. The stated that she was very regular when it came to her period. The clinical outcome of the breakthrough bleeding was unknown. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906627-1	developing a cold sore (herpes simplex type 1) the following morning/She usually develop a cold sore with an illness; developing a cold sore (herpes simplex type 1) the following morning/She usually develop a cold sore with an illness; This is a spontaneous report from a contactable consumer (patient). A 52-year-old female patient received the first dose of bnt162b2 (lot number and expiration date were not reported), via an unspecified route of administration on the right arm on 16Dec2020 16:15 at a single dose for immunization. The patient's medical history included cold sore and celiac disease. The patient was not pregnant. Concomitant medication included cetirizine hydrochloride (ZYRTEC). The patient reported that it was not necessarily an adverse event but she noticed that she was developing a cold sore (herpes simplex type 1) the following morning on 17Dec2020 10:00. She usually develop a cold sore with an illness. She also typically take valacyclovir to treat but opted not to take it (did not want to interfere with the vaccine and body developing antibodies). No treatment was received for the events. The patient was not diagnosed with COVID-19 prior to vaccination neither had been tested for COVID-19 post vaccination. Outcome of the events was recovering. The events was considered non-serious. Information on lot/batch number has been requested.; Sender's Comments: Based on the information currently provided, cold sore (herpes simplex type 1) onset more likely represents the recurrence of the underlying herpes viral infection. Currently no biological plausibility indicated the event is attributed to the vaccine use.	No current illness for this event.	ZYRTEC [CETIRIZINE HYDROCHLORIDE]
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906628-1	Red raised rash 48 hours after Extreme nausea and dizziness; Red raised rash 48 hours after Extreme nausea and dizziness; Red raised rash 48 hours after Extreme nausea and dizziness; This is a spontaneous report from a contactable healthcare professional. A non-pregnant 45-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), intramuscularly on 15Dec2020 15:45 at a single dose for COVID-19 immunization. Medical history included ulcerative colitis, hypothyroidism, allergies: sulfites. sulfa. Concomitant medication included amfetamine aspartate, amfetamine sulfate, dexamfetamine saccharate, dexamfetamine sulfate (ADDERALL), dheia (MANUFACTURER UNKNOWN), levothyroxine, liothyronine (NP THYROID), progesterone (MANUFACTURER UNKNOWN), fluoxetine hydrochloride (PROZAC), levothyroxine sodium (SYNTHROID), bupropion hydrochloride (WELLBUTRIN). On 15Dec2020, the patient experienced red raised rash 48 hours after extreme nausea and dizziness. No treatment was received from the events. The outcome of the events was not recovered. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up.	No current illness for this event.	ADDERALL; DHEA; NP THYROID; ; PROZAC; SYNTHROID; WELLBUTRIN
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906630-1	Pain at the injection site for 2 days.; This is a spontaneous report from a contactable consumer. A 23-year-old non-pregnant female patient received the first dose of the bnt162b2 (BNT162B2; also reported as COVID 19, brand=Pfizer-BioNTech; Lot Number: EH9899), via an unspecified route of administration in the left arm on 15Dec2020 at 08:30 at 23-years-old at a single dose for COVID-19 immunization. The vaccination facility was a hospital. It was also reported that there were no other vaccinations in four weeks, and there were no other medications in two weeks prior to the vaccination. The patient's medical history was reported as none. The patient did not have COVID-19 prior to the vaccination and was not tested for COVID-19 post vaccination. The patient has no known allergies (allergies to medications, food, or other products: no). Concomitant medications were not reported. On 15Dec2020 at 21:30, the patient experienced: pain at the injection site for 2 days. There was no treatment for the adverse event; nor did the event require hospitalization. The clinical outcome of the event, pain at the injection site for 2 days, was recovered on an unspecified date in Dec2020.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906631-1	patient experience slight congestion; This is a spontaneous report from a contactable physician (patient) via Pfizer Sales Representative. A patient of unspecified age and gender received bnt162b2 via an unspecified route of administration on an unspecified date at single dose for administration of Covid-19 vaccine. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient experienced slight congestion on an unspecified date with outcome of unknown. Event took place after use of product. Information on the lot/batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906632-1	episodes of facial and head numbness and heaviness, lasting 15-30 min or so; isolated to the side of injection site; episodes of facial and head numbness and heaviness, lasting 15-30 min or so; isolated to the side of injection site; This is a spontaneous report from a contactable physician. A 41-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: 0E51685), intramuscularly in the left arm, on 17Dec2020 at 09:00 (at the age of 41-years-old) at a single dose for COVID-19 immunization. The patient had no medical history. Concomitant medications, taken within two weeks of vaccination, included zinc (MANUFACTURER UNKNOWN), quercetin (MANUFACTURER UNKNOWN), and multivitamins (MANUFACTURER UNKNOWN). The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient had no known allergies to medications, food, or other products. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient experienced episodes of facial and head numbness and heaviness, lasting 15-30 minutes or so; isolated to the side of injection site on 17Dec2020 at 22:15. No therapeutic measures were taken as a result of the events. The clinical outcome of episodes of facial and head numbness and heaviness, lasting 15-30 minutes or so; isolated to the side of injection site was not recovered. It was also reported that since the vaccination, the patient had not been tested for COVID-19. No follow-up attempts are needed. No further information expected.	No current illness for this event.	:: MULTIVITAMINS [VITAMINS NOS]

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906660-1	Tongue numbness and sensitive; Tongue numbness and sensitive; This is a spontaneous report from a contactable nurse (patient) and a physician. A 31-year-old female received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot EK5730) intramuscular on 17Dec2020 13:30 at a single dose on right arm as COVID-19 vaccine. Medical history was not reported. The patient had no known allergies to medications, food, or other products. Concomitant medications were not reported. On 17Dec2020, she received the vaccine and an hour after getting it, her tongue went numb and became sensitive (tongue numbness and sensitive on 17Dec2020 14:00). Today, it was not as numb feeling but was still sensitive. The events were assessed as non-serious, did not result in death, not life threatening, did not cause/prolonged hospitalization, not disabling/incapacitating, did not cause congenital anomaly/birth defect. Treatment was not received for the adverse events. The patient was not pregnant at the time of vaccination. The facility where the most recent COVID-19 vaccine was administered was noted as other. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. There was no expiry date for the vaccine. The card she has, only has the received date: 17Dec2020 and when to return for the second dose: 07Jan2021. She had submitted a claim about the side effects experienced but it wasn't clear what would happen next. The patient inquired if someone would reach out to her and would there be a follow-up. She wanted to know what the process would be regarding reporting. The outcome of the event 'numbness of tongue' was recovering while 'sensitive tongue' was not recovered.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906661-1	fever; Malaise; chills; muscle and joint aches; muscle and joint aches; extreme fatigue; nausea; headache; both arms started itching on lower arm, not at site/the face and scalp started itching; This is a spontaneous report from a contactable healthcare professional. A 36-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection, lot number EH9899, expiration date unknown), dose number 1, intramuscularly on 16Dec2020 10:00 at a single dose for COVID-19 immunisation. Medical history included Hashimoto's Thyroiditis, MDD (major depressive disorder), and acne. Concomitant medications included zinc, ergocalciferol (VIT D), venlafaxine, levothyroxine sodium (SYNTHROID), and spirinolactone. The patient had vaccine at 10 AM. At 11 AM, both arms started itching on lower arm, not at site; injection arm was worse than non injection arm. At 11:45, the face and scalp started itching. By noon, all symptoms had resolved. The patient did not medicate. Two days post vaccine, on 18Dec2020, the patient had all symptoms on warning sheet: fever, malaise, chills, muscle and joint aches, extreme fatigue, nausea and headache. The outcome of the event was recovered for itching and not recovered for the other events.	No current illness for this event.	; VIT D; SYNTHROID;
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906662-1	Soon after the shot I had a big headache, almost like a migraine headache; I am having tough time right now; Soon after the shot I had a big headache, almost like a migraine headache; I am having tough time right now; I have slight fever 99.6; Muscle ache; This is a spontaneous report from a contactable healthcare professional, the patient. A 58-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EK55730), via an unspecified route of administration on 17Dec2020 at 13:00 (at the age of 58-years-old) as a single dose for COVID-19 immunization. Medical history included high blood pressure, lupus, stroke, and diabetes. Concomitant medications included lisinopril (MANUFACTURER UNKNOWN). On 17Dec2020, soon after receiving the vaccine, the patient experienced a big headache, almost like a migraine headache; slight fever of 99.6 (no units provided), and muscle ache. The clinical outcomes of slight fever of 99.6 and muscle ache were unknown; while that of the big headache, like a migraine was not recovered.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906663-1	HCP caller is complaining of a fever after vaccine got wed; Chills; felt tired; This is a spontaneous report from a contactable nurse (patient). A 64-year-old female patient started to received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899, expiry date: 31Mar2021), via an unspecified route of administration on 16Dec2020 at a single dose for Covid-19 immunisation. Medical history was reported as none. There were no concomitant medications. The patient called to report on the COVID vaccine, and explains that she received the vaccine on Wednesday, 16Dec2020 around 2:30pm. She received the vaccine at work. It was administered in the left upper arm. The following morning (17Dec2020) around 2am she woke up with chills and a fever that lasted all day yesterday, so she didn't go to work. She was running a fever of about 99.7-100.0 on 17Dec2020 and that was with alternating Advil and Tylenol. She felt tired and so she rested the whole day. The patient explained that she thought it would go away after a day but today she woke up at 5am with chills. She didn't take her temperature at that time but took some medication. Then on 18Dec2020 at 9am, she woke up with chills again and she still was at 100.8. She called to see how long does the fever last after the vaccine. Outcome of the events fever and chills was not recovered and for fatigue was unknown.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906664-1	Patient developed a delayed onset rash 12 hours after getting vaccine and has no resolved in 3 days; This is a spontaneous report from a contactable pharmacist. A female patient in their 40's received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at single dose on an unspecified date for immunisation. The patient medical history and concomitant medications were not reported. On an unspecified date, the patient developed a delayed onset rash 12 hours after getting vaccine and has no resolved in 3 days. The outcome of the events was not recovered. Information on the Batch/Lot number has been requested.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906692-1	felt dehydrated; pain in the arm; but it was still hard; arm swelling where she got the injection; Dizziness; This is a spontaneous report from a contactable consumer reporting for herself. A 26-year-old female patient received first dose BNT162B2 (Pfizer product, lot number EH9899), via an unspecified route of administration on 17Dec2020 06:00 at single dose on left arm for COVID-19 immunization. There were no medical history and concomitant medications. No prior vaccinations (within 4 weeks); no adverse events following prior vaccinations. The patient reported that she was the unit secretary in the hospital. She got the first dose COVID vaccine yesterday (17Dec2020 06:00). Vaccination facility type was hospital; vaccine was not administered at military facility. She was reading the paper they gave her at work. She had arm swelling where she got the injection, it had gone down a little, but it was still hard. She also felt dizziness and dehydrated. The dizziness started about an hour ago (on 18Dec2020). Since laying down it had improved a little. She has felt dehydrated since around 11am (18Dec2020 11:00). She was sipping on Gatorade, but still felt dehydrated. She took a Tylenol today (18Dec2020) for the pain in the arm and swelling. She had gone to the website and it didn't say what to do about the side effects besides call #. She didn't think she needs to call # for a swollen arm. Therapeutic measures were taken as a result of arm swelling where she got the injection, pain in the arm and felt dehydrated. The adverse events did not require a visit to emergency room or physician office. The outcome for events arm swelling where she got the injection and Dizziness was resolving while for other events was unknown.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906693-1	ringing in his ear on the left; This is a spontaneous report from a contactable Physician(patient). The 37-year-old male patient received first dose of vaccine BNT162B2(Batch/lot number: EK7530, Expiration date: unknown), via an unspecified route of administration on 18Dec2020 at single dose for prevention of Covid. Medical history included gastroesophageal reflux disease(GERD). Concomitant medication included omeprazole for GERD. The patient stated in the hospital, he had the Covid vaccine 2 hours ago and he just want to report a possible side effects, about hour after the vaccine he had ringing in his ear on the left on 18Dec2020. No treatment was received. It was not that bad. It was improving. Outcome of event was recovering.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906694-1	soreness at injection site at hour 3; low grade fever at hour 8; This is a spontaneous report from a contactable physician reporting for him/herself via Pfizer sales representative. This patient of unknown age and gender received on an unknown date a single dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) for COVID-19 immunization. Medical history and concomitant medications were not reported. On an unknown date, the patient noted soreness at injection site at hour 3, and low grade fever at hour 8. Outcome was unknown. No follow-up attempts are possible, information about batch number cannot be obtained.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906695-1	numbness in my 'ear'/numbness in my hands; Numbness in the beginning and right now numbness and pain; right now numbness and pain; This is a spontaneous report from a contactable consumer (patient). A 48-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot/batch number and expiration date unknown), via an unspecified route of administration on 18Dec2020 at 15:00 at single dose for COVID-19 immunization (just got the vaccine). The patient's medical history and concomitant medications were not reported. The patient reported that she just got the vaccine today (18Dec2020) and she took it in her hospital, she felt numbness in her 'ear', her hands and right now going through the pain. Patient reported that numbness in the beginning and right now numbness and pain. She got the vaccine exactly at 30'clock (15:00) and after 20-25 minutes later, she started feeling numbness and pain. She did have pain right now. She had not taken anything as treatment. The outcome of the events was unknown. Information on the Lot/Batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906696-1	Recently feeling chilly; I just feel very nauseous and weaken like my body some parts are hot and some parts are cold; I just feel very nauseous and weaken like my body some parts are hot and some parts are cold; weaken like my body some parts are hot and some parts are cold; This is a spontaneous report from a contactable consumer (patient). A patient of unspecified age and gender received BNT162B2 (reported as COVID Vaccine, lot number and expiration date not reported), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient received the COVID Vaccine and had been recently feeling chilly and also just really weak and nauseous and patient guessed just never felt this way before. The patient know that they were side effects but just felt very nauseous and weaken like the patient's body some parts were hot and some parts were cold. The outcome of events was unknown. Information regarding lot/batch has been requested.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906697-1	light headed; tingling all over body; This is a spontaneous report from two contactable consumers. A 49-year-old female patient started to receive first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), intramuscular at left arm on 17Dec2020 at 14:00, single dose for COVID-19 immunization. Medical history included asthma and allergy to sulfa, both from an unknown date and unknown if ongoing. Concomitant medication included salbutamol (PROVENTIL), omeprazole and cetirizine hydrochloride (ZYRTEC). The patient previously took morphine and tramadol for and both experienced allergies on an unspecified date. On 17Dec2020 at 14:10, the patient experienced light headed and tingling all over the body. The patient outcome of the light headed was not recovered, the patient outcome of tingling all over the body was recovered within 30 minutes.	No current illness for this event.	PROVENTIL [SALBUTAMOL]; ; ZYRTEC [CETIRIZINE HYDROCHLORIDE]
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906698-1	allergic reaction; This is a spontaneous report from a contactable physician. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration in Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced allergic reaction in Dec2020. No further details were provided. The outcome of allergic reaction was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up.; Sender's Comments: Based on the information available, a possible contributory role of the suspect products cannot be excluded for the reported event allergic reaction due to temporal association. However patient past medical history regarding allergy would have been helpful for a meaningful causality assessment. Case will be reevaluated upon further information	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906701-1	Swelling of Right arm below the elbow not at the injection site. Soreness and tightness of the right hand. After 72 hours these symptoms resolved however on 12/19/2020 developed burning and itchy hives over abdomen, back and trunk. On 12/21/2020 the hives developed on the scalp.	None	B-12,Rovastatin and Multi-vitamin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906707-1	Low-grade temperature ranging from 99.8-100.3; chills; body aches; fatigue; This is a spontaneous report from a non-contactable nurse (patient). An adult female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date were not reported), intramuscular on the right arm on 16Dec2020 18:00 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient was not pregnant. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 17Dec2020 05:00, the patient experienced low-grade temperature ranging from 99.8-100.3, chills, body aches, and fatigue. No treatment was received for the adverse events. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient had not been tested for COVID-19. Outcome of the events was recovering. The events were considered non-serious. No follow-up attempts are possible; information about lot/batch number cannot be obtained.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906709-1	Chills, severe headache, joint pain, muscle aches; Chills, severe headache, joint pain, muscle aches; Chills, severe headache, joint pain, muscle aches; Chills, severe headache, joint pain, muscle aches; This is a spontaneous report from a contactable consumer. A 48-year-old female patient received bnt162b2 (BNT162B2, lot number: EH9899), via an unspecified route of administration on the left arm on 17Dec2020 10:45 at a single dose for COVID-19 immunisation. Medical history included asthma and COVID-19 (patient was diagnosed with COVID-19 prior to vaccination). Concomitant medications included ascorbic acid, biotin, calcium carbonate, calcium pantothenate, calcium phosphate dibasic, chromium picolinate, coenzyme Q10, copper sulfate, cyanocobalamin, ferrous fumarate, folic acid, magnesium borate, magnesium oxide, manganese sulfate, nickel sulfate, nicotinamide, panax ginseng root, phytonadione, potassium chloride, potassium iodide, pyridoxine hydrochloride, retinol acetate, riboflavin, sodium metavanadate, sodium molybdate, sodium selenate, stannous chloride, thiamine mononitrate, tocopheryl acetate, zinc oxide (CENTRUM ENERGY), and pantoprazole sodium sesquihydrate (PROTONIX [PANTOPRAZOLE SODIUM SESQUIHYDRATE]). On 17Dec2020 13:00, the patient experienced chills, severe headache, joint pain, muscle aches. Therapeutic measure was not given as a result of the events. Clinical outcome of the events was not recovered.	No current illness for this event.	CENTRUM ENERGY; PROTONIX [PANTOPRAZOLE SODIUM SESQUIHYDRATE]
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906710-1	Injection site pain; Fatigue; This is a spontaneous report from a contactable healthcare professional. A 50-year-old female patient received bnt162b2 (BNT162B2, lot number: EK5730), intramuscular on the left arm on 17Dec2020 09:00 at a single dose for COVID-19 immunisation. Medical history and concomitant medications were not reported. On 18Dec2020, the patient experienced injection site pain and fatigue. Therapeutic measure was not given as a result of the events. Clinical outcome of the events was recovering.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	906711-1	Arm soreness; fatigue; This is a spontaneous report from a contactable consumer. A 23-year-old female patient received the 1st dose of bnt162b2 (BNT162B2) at single dose at right arm on 18Dec2020 08:00 for immunization, administered at hospital. The patient medical history was not reported. No known allergies. Concomitant medication included MultiVitamins and coenzyme Q10 (VITAMIN D [COLECALCIFEROL]). The patient has not received any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced arm soreness and fatigue on 18Dec2020 11:00. The patient has received not treatment for the events. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The action taken in response to the events for bnt162b2 was not applicable. The outcome of events was recovering. Information on the lot/batch number has been requested.	No current illness for this event.	VITAMIN D [COLECALCIFEROL]

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907056-1	Red hives under chin, on neck, and on chest beginning 30 minutes after dose and lasting approximately 1 hour.	N/A	Pintrea, Allertec
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907057-1	This nurse was notified that the worker was having tachycardia post vaccination. The worker had a baseline HR of 75 while at rest, per wrist band monitor belonging to worker. Worker's HR steadily increased as high as 94 BPM. The worker was shaking and the worker complained of throat not feeling right and dizziness. Worker described their throat as feeling tight. This nurse brought the worker to the back area of the clinic, asked the observer to initiate a MET, and this nurse went to med room and took an EpiPen from the box. This nurse administered the EpiPen into the right thigh at 1600. by 1604 the MET team had arrived. The MET team spent 20 to 25 minutes with worker. The MET team included two PICU physicians, one being a fellow. This nurse was advised that the worker was asked if wanted to go to the ED (by the worker) and worker declined. This nurse agreed to observe the worker until the close of clinic at 1730. Vitals take at 1720 were as follows: 89 HR, 94% O2 sat, 124/66 BP (RUE), 16RR. Worker was no longer feeling dizzy, no throat symptoms, and refused ED observation and went home. Nothing further reported.	None disclosed	Unknown

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907092-1	At the time of the injection, I felt dizzy about 5 minutes afterward but I went away rather quickly. I also started coughing, but as I have asthma and I was rather anxious, I used my inhaler. I did mention I had felt a little dizzy at the appointment but it was going away. Then, around little that same night /the next morning (12/20), I got a little short of breath and chest tightness, but nothing major. Around 2pm that day, the tightness got worse and my inhaler stopped helping as much and I got a cough. Then, around 3 am today (12/22), I woke up with chills but no fever and nausea and threw up several times and then it went away. Around 6pm tonight, I was taking a nap and woke up with what I think was sleep apnea. I felt like I wasn't breathing quite right, and like it almost hurt to breathe because my chest was so tight. I checked my oxygen levels while sitting quietly, but not laying down like I was before and they were 95-97%. Chest tightness remains and is worse than before, breathing is ok. I have a lot of muscle pains and body aches, some cough, and very mild phlegm. No fever. I did not go to see a doctor because I don't have health insurance right now and I don't want to pay for the bill.	None	Lantus, Humalog 25, Very occasionally Salbutamol inhaler

A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot number unknown), via an unspecified route of administration on 17Dec2020 as single dose for COVID-19 immunization. The patient's medical history and/ concomitant medications were not reported. The patient experienced arm pain at the injection site in Dec2020, reported as non-serious. Therapeutic measures were taken as a result of the event; patient took ibuprofen (ADVL) 200 mg. The outcome of arm pain at the injection site was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up .	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907203-1	felt dizzy; elevated blood pressure; This is a spontaneous report from a contactable pharmacist. A 51-year-old female non-pregnant patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EJ1685, expiry date unknown) intramuscular on 18Dec2020 at single dose for COVID-19 immunization with her right arm. The pharmacist informed that COVID-19 vaccine was administered in a hospital facility. The patient's medical history and concomitant medications were not reported. The patient previously took doxycycline and experienced allergies. The pharmacist informed that the patient did not receive any other vaccines within 4 weeks prior to the COVID-19 vaccine. On 18Dec2020, the patient felt dizzy and has elevated blood pressure, the patient's pulse was normal. The pharmacist informed that the patient was not diagnosed with COVID-19 prior to vaccination and has not been tested with COVID-19 since vaccination. The pharmacist informed that no treatment was received due to the events. The outcome of the events felt dizzy and elevated blood pressure was recovering. The pharmacist considered the events non-serious and did not result in death, not life threatening, did not cause/prolonged hospitalization, not disabling/incapacitating, and not a congenital anomaly/birth defect.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907204-1	Starting at 9am, had jaw pain, that subsided, nausea at dinner, severe chills when I went to bed, generalized fatigue and body aches throughout the day and night and continue to still have both	None	Lo-loestrin, Lexapro, Nexium
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907206-1	Fevers, headache, fatigue, myalgia about 12 hours after vaccine.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907207-1	fever/mild side effect of fever; This is a spontaneous report from a contactable other healthcare professional (HCP, patient himself) via Medical information team. A 24-year-old male patient received the first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine; NDC/batch/lot number and expiration date were unknown), via an unspecified route of administration on the left shoulder on 17Dec2020 at 13:30 at a single dose for COVID-19 immunization. The patient had no medical history. There were no concomitant medications. The patient previously received a flu shot [influenza vaccine (INFLUENZA)] for immunization when he was a kid (a long time ago) and experienced the same reaction, fever. The patient was having a fever/mild side effect of fever on 18Dec2020. He said he just called the number on the packet they gave him at the site, where he got the vaccine and he was wondering if it was okay to take ibuprofen. He did not think they provided him with an NDC, lot, and expiration as it was not on the packet he got; he said they might have put the information on the little card they gave him, but he did not have it with him at the time of the report. He did not know the dose that he was administered. This was the first injection with this COVID 19 vaccine. He further stated that fever started on 18Dec2020; when he woke up, it was like that, but he woke up at 9AM. The event did not require a visit to an emergency room or physician office. The patient had no prior vaccinations (within 4 weeks). The patient had no investigation assessment. Therapeutic measures were taken as a result of fever/mild side effect of fever. The patient was not recovered from the event. No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907218-1	headache and feeling overheated; headache and feeling overheated; fatigue; GI symptoms; loose stool; gas; mild tightness but not so much like a cramp; This is a spontaneous report from non-contactable physician via a Pfizer Sales Representative. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration, in Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced headache and feeling overheated, fatigue, gastrointestinal (GI) symptoms, loose stool, gas, mild tightness but not so much like a cramp in Dec2020. The clinical course was reported as follows: The patient was symptom free for the first 20 hours after vaccination, had mild symptoms from the 20-28 hour mark, and felt fine since then. The patient woke up at 3:30 in the morning one day (day of reporting) with a headache and feeling overheated. The temperature was checked several times on an unspecified date, with no fever. For the next 3-4 hours, there were a wave of symptoms; mostly a headache, fatigue, and GI symptoms. The symptoms responded pretty well to increasing water intake, taking an electrolyte supplement (MANUFACTURER UNKNOWN), and breakfast. The patient also had gas, loose stool, and mild tightness but not so much like a cramp. Therapeutic measures were taken as a result of the events as aforementioned. The clinical outcome of headache and feeling overheated, fatigue, GI symptoms, loose stool, gas, mild tightness but not so much like a cramp was unknown. No follow-up attempts are possible; information about batch/lot number cannot be obtained.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907500-1	Vaccine administered around 10:45(am) on 12/21/2020. Around 23:00(pm) (12/21/2020) I was feeling chilly, put my jacket while at work (night shift) on but continued to feel tired, eyes hurt a little, slight headache, general muscle soreness, and increasing pain in my left arm where I got the shot. I took 600mg Advil, felt fine most the night but still really tired. End of shift (07:30(am)) I was very tired with symptoms returning. Got home (08:00 on 12/22/2020), went right to sleep but at that point had chills, felt cold, headache, body aches, pain in left arm worse / really hurting - tender to touch but not swollen or red, neck glands?felt swollen? but I don't think they actually were swollen. I woke up 4 hours later (12:00 - 12/22/2020) around noon exactly sweating, with all the same symptoms. No GI discomfort. I took 975mg Tylenol. Checked my temp, 99.9F. I couldn't fall back asleep for several hours and my body temperature felt like it was all over the place (sweating and hot, then cold, repeat). Finally fell asleep again from 16:00 to 21:30. Symptoms were all still present. Took Tylenol 1,000mg and stayed up until 05:00 (12/23/2020) with good relief from the Tylenol throughout the night and then went back to sleep from 05:00 to 10:00 (12/23/2020). Woke up symptom free and have remained symptom free.	None	Whey Protein, Pea Protein, BCAAs, Fish Oil, Flax Seed Oil, and Creatine.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907603-1	<p>"Hoarseness; Nausea; Loss of appetite; Weakness; Headache; whole body ached; pain in the area the shot was applied; some swelling at the injection site; This is a spontaneous report from a contactable nurse. A 49-year-old female patient received the first dose of the bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number: EH9899), via an unspecified route of administration in the left arm on 15Dec2020 at 15:30 at 49-years-old at a single dose for COVID-19 immunization. The vaccination facility type was a hospital. History of all previous immunization with the Pfizer vaccine considered as suspect (or patient age at first and subsequent immunizations if dates of birth or immunizations are not available): none. There were no additional vaccines administered on the same date of the Pfizer Suspect. The patient's medical history was reported as none. The patient was not a smoker. Family Medical History Relevant to adverse events: none. Concomitant medications included routine medications. On 15Dec2020, the patient experienced: pain in the area the shot was applied (non-serious). On 16Dec2020, the patient experienced: weakness (non-serious), headache (non-serious), whole body ached (non-serious). On 17Dec2020, the patient experienced: loss of appetite (non-serious). On 18Dec2020, the patient experienced: hoarseness (non-serious), nausea (non-serious). On an unspecified date in Dec2020, the patient experienced: some swelling at the injection site (non-serious). The events did not require a visit to an emergency room or physician office; there was no prior vaccinations (within 4 weeks), there was no adverse events following prior vaccinations. The clinical course was reported as follows: The patient (nurse) had the vaccine administered on 15Dec2020 at about 15:30; and was told to notify if she had any side effects. On the same day, the patient had a lot of pain in the area the shot was applied. The patient received the shot in the left arm and after that, she was feeling weakness, headache, her whole body ached, she had difficulty speaking, and nausea. The patient was advised to call and report anything she experienced after the vaccine. The patient first started with strong pain in the area where the vaccine was administered. It was very painful, and she had some swelling at the injection site. Next, she had a headache and loss of appetite. The patient had weakness in her body. On 18Dec2020, the headache started with some nausea. There was a very strong pain in her whole body and hoarseness (like she had no voice). The patient clarified later in the call she had a headache prior to 18Dec2020. The patient reported that the "" pain in the area the shot was applied"" was better. The patient reported ""Is not too annoying like it was yesterday."" The patient took acetaminophen for pain and applied ice packs. The patient reported that the weakness was better on 18Dec2020. The headache was better because she took medication. The whole-body aches: were about the same, a strong pain in her back, in her arms, everywhere. The hoarseness which was clarified by the patient as what was meant when reporting difficulty speaking. The patient clarified she had no voice. On 18Dec2020, in the morning, she felt a hoarseness. The patient never presented this symptom until 18Dec2020. Loss of appetite: This started on 17Dec2020 and it was about the same since starting since she really had not eaten anything. Nausea: Started on 18Dec2020 in the morning when she woke; she had not done anything because she had lost her appetite. The patient had only fruit juice. The nausea was about the same since starting. "" When asked a seriousness criterion for the events: She would describe it has had a cold."" The patient reported that there was no difficulty breathing and so she felt it was not so urgent that there was a need for her to go to the emergency room. The patient received a call from the place where the vaccine was given; and was told if her symptoms were to get worse, she would have to go to the emergency department. The patient will get the card after her second dose; The patient was given a piece of paper. There was no expiry date or NDC provided on the paper. The patient reported that she takes nothing other than routine medications. The patient had no other vaccines on the day she received the COVID vaccine. The patient reported she had no important medical history and has had no reactions to any other vaccines previously. There was no relevant family medical history. The patient had been able to manage the symptoms herself at this point and did not require any additional trips to the hospital or doctor's office. Therapeutic measures were taken as a result of pain in the area the shot was applied, and headache. The clinical outcome of the events: pain in the area the shot was applied, weakness, headache, was recovering. The clinical outcome of the event, whole body ached, loss of appetite, hoarseness, nausea was not recovered. The clinical outcome of the event, some swelling at the injection site, was unknown."</p>	No current illness for this event.	No other medications for this event.

She had some facial edema around her eyes. No difficulty with breathing, swallowing or tongue swelling. This all occurred at home.	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907618-1	Prior to receiving the vaccine I was feeling well, history of asthma, seasonal and environmental allergies, and no history of significant symptoms after previous vaccinations. Shortly after administration of the COVID-19 vaccine I began to feel nauseous which lasted in duration for approximately 3 days. On the vaccine administration day, several hours after administration I developed retrobulbar pain, bilateral eyelid edema, erythema of the right eyelid, this was one of the most significant symptoms that persisted for several days. In addition, on 12/20 I experienced a several hour episode of tinnitus and diminished auditory acuity in my right ear, this has also resolved. From day 2 until current I have experienced decreasing myalgias and arthralgias, the most significant has been lower back midline pain which has been improving. I developed a temperature of 99.7 Fahrenheit, with administration of acetaminophen. Although the symptoms have improved this is certainly the most significant constellation of symptoms I have experienced after any vaccination.	Asthma	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907619-1	Dry mouth and itching on the back 20 minutes after receipt of vaccine. Throat feeling blocked. Headache. Diphenhydramine 50 mg PO x1 given. Symptoms started to subside approximately 20 to 30 minutes after administration of diphenhydramine. Blood pressure initially elevated at 178/84 but decreased to 142/82 approximately 15 minutes following administration of diphenhydramine. Patient a little drowsy from the diphenhydramine. Ears ringing and itching began 1 hour 15 minutes following administration of vaccine (and approximately 45 minutes following administration of diphenhydramine). Famotidine 20 mg PO x1 administered.	None	Metformin, Lisinopril/Hydrochlorothiazide, Victoza, Metoprolol tartrate, hydrocodone/acetaminophen

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907638-1	Pfizer-BioNTech COVID-19 Vaccine EUA numbness in left arm and hand post injection	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907648-1	Blotchy skin from chest; full rash on torso and back from hips up to chest/slight rash on thighs/rash on back of knees and legs/Looks like a drug rash; Noticed being a bit itchy that evening; This is a spontaneous report from a non-contactable consumer (patient). A 41-year-old female patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot: EH9899) via an unspecified route of administration at the left arm on 15Dec2020 16:00 at a single dose for covid-19 immunisation. Medical history included lga nephropathy from an unknown date. Concomitant medication included lisinopril. On 15Dec2020, the patient noticed being a bit itchy before going to bed. On 16Dec2020 18:00, the patient noticed blotchy skin from chest up, full rash on torso and back from hips up to chest. The patient also noticed slight rash on thighs and more rash on back of knees and legs by 18Dec2020; looked like drug rash. The patient had no shortness of breath, fever, swelling, etc. The events were reported as non-serious and no treatment was given. Outcome of the events was recovering. No follow-up attempts are possible. No further information is expected.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907652-1	"more than likely anxiety; red, splotchy rash on her neck; sweaty; felt slightly dizzy, particularly when moving her head side to side; "tightness" in the upper middle quadrant of her stomach, near the xiphoid process; "tightness" in the upper middle quadrant of her stomach, near the xiphoid process; HR was 140; This is a spontaneous report from a contactable pharmacist. A 41-year-old female patient received the first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine; lot number: EK5730), intramuscular (IM) on the left arm on 17Dec2020 at 18:30 at a single dose for COVID-19 immunization at the hospital. The patient's medical history and concomitant medications were not reported. The patient had no other vaccine in four weeks. Approximately 4 minutes after administration, on 17Dec2020 at 18:34, the patient complained of "tightness" in her upper middle quadrant of her stomach, near the xiphoid process. At that time (18:34), her heart rate (HR) was 140. At 18:40, her HR was 96. At 18:44, the patient had a red, splotchy rash on her neck. The patient received 25 mg of diphenhydramine (BENADRYL) orally. The patient noted that she was sweaty and she felt slightly dizzy, particularly when moving her head side to side. At 18:47, the patient's HR was 80. At 18:52, HR was 84 and at 18:58, HR was 68. The patient stated she felt much better, dizziness seemed to resolve quickly per patient's report. She was able to ambulate and turn her head side to side with no further difficulties. Throughout the episode, the patient denied nausea, shortness of breath, itching, urticaria or any other rash besides the redness on her neck. After discussion with the physician (MD), nurse (RN), and doctor of pharmacy (PharmD), who were present for the vaccine administration and reaction, it was determined that this was more than likely anxiety (17Dec2020 at 18:45) and not an allergic/anaphylactic reaction. The patient had no Covid prior vaccination and not Covid tested post vaccination. The events were assessed as non-serious. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. Therapeutic measures were taken as a result of "more than likely anxiety; "tightness" in the upper middle quadrant of her stomach, near the xiphoid process; HR was 140; red, splotchy rash on her neck; sweaty; and felt slightly dizzy, particularly when moving her head side to side." The patient recovered from all the events on an unspecified date."	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907654-1	<p>lost sense of taste; Headache; arm was hurting; fatigue; sinus congestion; sneezing; nose hurting because it was dry; nose hurting because it was dry; flu like symptoms; increase in urination; erythema; at the site of injection; swelling at the site of injection; malaise; pain and achiness; This is a spontaneous report from a contactable other healthcare professional (nurse practitioner) reported for himself. A 29-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EH9899, expiry date unknown) via an unspecified route of administration on 17Dec2020 06:30 at single dose for COVID-19 immunization with his left deltoid. The reporter informed that the vaccination facility was a hospital and not administered at military facility. The patient's medical history included autoimmune stuff going on and the patient understand that the vaccine could intensify it. The patient informed that his autoimmune condition was psoriasis; lichen planus, irritable bowel syndrome (IBS), everything hypertension and other generic condition, migraine without aura. There were no concomitant medications. The reporter informed that no additional vaccines was administered on same date and within 4 weeks prior. The patient previously took thimorosal and was allergic. The patient had flu shot/flu vaccine (influenza vaccine) when very young and experienced allergic reaction. The patient experienced almost immediately had a headache (17Dec2020 06:35). He had the pain and achiness (Dec2020) like generic symptoms, something else was lost sense of taste that was 12 hours (17Dec2020 18:30) after taking the vaccine. His first dose was yesterday 17Dec2020 at 6:30 am. He clarified further that the headache started within 5 minutes of receiving the vaccine, arm was hurting within an hour, had the fatigue after 2 hours, and about 12 hours after noticed a loss for sense of taste. He also experienced sinus congestion and sneezing that started around 1 or 2 o clock on the same day (17Dec2020) and it was 8 hours after. The patient's headache was very mild now, fatigue was hard to say because the patient just woke up after sleeping 9 hours straight, sinus congestion greatly oscillates back and forth between being congested and not able to clear his nose at all and then it change in the matter 3 minute to suddenly his nose hurting because it was dry (Dec2020). The congestion could last half hour. The patient clarified that yesterday it was completely congested and today it was going back and forth. The patient informed that his side effects were flu like symptoms (Dec2020). The patient experienced increase in urination, erythema and swelling at the site of injection (Dec2020). The patient informed that he was tested maybe 2 months ago and at that time it was negative, but he didn't have a recent one. The events did not require a visit to emergency room and physician office. The patient took Advil for the achiness malaise (Dec2020). The outcome of the events headache was recovering, lost sense of taste, sinus congestion, sneezing was not recovered, while pain and achiness, arm was hurting, fatigue, nose hurting because it was dry, flu like symptoms, increase in urination, erythema and swelling at the site of injection, malaise was unknown. The patient's second dose was unknown, he was given a separate card for the second date and was having issues finding it. The patient has misplaced the card but knows it was his calendar, he will go in the office today and find out, he knew it was scheduled on a Friday.</p>	Psoriasis	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907655-1	<p>Chills; fatigue; malaise; joint and muscle aches all over body as well as at and around injection site; joint and muscle aches all over body as well as at and around injection site; joint and muscle aches all over body as well as at and around injection site; mild fever: 99.6 oral Fahrenheit; This is a spontaneous report from a contactable consumer (patient). A 39-year-old male patient received bnt162b2 (BNT162B2) lot number: Ek5730, expiration date: not reported, via an unspecified route of administration in the left arm, first dose on 17Dec2020 09:45 at a single dose for immunization. Medical history included allergies to cephalosporins. The patient's concomitant medications were not reported. The patient did not receive any other vaccines within 4 weeks prior to the covid vaccine. On 17Dec2020 at 04:00 pm, the patient experienced chills, fatigue, malaise, joint and muscle aches all over body as well as at and around injection site, mild fever of 99.6 oral Fahrenheit, lasting two days with lessening severity so far. The events were reported non-serious with no treatment received. The patient had no covid prior vaccination nor had he tested post vaccination. The outcome of chills, fatigue, malaise, joint and muscle aches all over body as well as at and around injection site, mild fever: 99.6 oral Fahrenheit was recovering.</p>	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907656-1	anxiety was kicking in really bad/anxiety episode/triggered her anxiety; metallic taste; arm pain at the injection site; This is a spontaneous report from a contactable consumer (patient). A 34-year-old female patient received the first dose of BNT162B2 (Pfizer product, lot EK5730, expiry date Mar2021) via an unspecified route of administration on 18Dec2020 (reported as today at 11:45, unknown if AM or PM) at a single dose on the arm as Covid 19 Vaccine. Medical history included cervical cancer since 2010, both mother and father have had cancer; post-traumatic stress disorder (PTSD); anxiety; had been on therapy counselling. Concomitant medications included hydroxyzine, sometimes uses medical marijuana, sometimes taking prenatal vitamins just because of the whole virus and stuff thing going around; the patient might not be pregnant but become pregnant (consumer was unsure- PENDING CLARIFICATION). She's in the middle of a divorce but she just takes the prenatal vitamins because of the higher doses to help run her immune system because of the virus. The patient received the vaccine today (18Dec2020) and she was not sure what these ingredients were. She's a single mother and an EKG and EEG tech working around Covid positive patients. She inquired if any of the ingredients or the vaccine itself do cause cancer. She really had a bad anxiety and PTSD and she didn't know but her anxiety was kicking in really bad right now. She's currently having anxiety episode now. The more she got home, the more she's thinking and that's kind of triggered her anxiety. She already has anxiety taking the vaccine/have anxiety about this Covid19 vaccine. She inquired if the lady knew like what triggered the anxiety if there's like any ingredient that could potentially cause cancer, do they spike protein, do those cause cells to mutate which causes cancer, so many answers and questions the patient had and there were no answers to her questions, nobody knew because it's still being studied and that's also where her anxiety was getting triggered and all about this was just unknown. She was just trying to figure out if there's a chemical ingredient made to be administered in the vaccine because being a mother she was trying to find answers and nobody seemed to have any answers and all she heard was she did not have. It was also stated that after she got the vaccine, she had really metallic taste for about an hour and a half and it finally went away. She also had a regular arm pain at the injection site, it's normal like how one get flu shot and stuff. The patient had no investigation assessment. Treatment for the events was reported as no. The outcome of the event metallic taste was recovered on 18Dec2020 while the rest of the event was unknown.	No current illness for this event.	; MEDICAL MARIJUANA
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907657-1	About 5 minutes after the injection, got a flushed feeling for a couple of minutes.; This is a spontaneous report from a contactable Other Health Professional. A 43-year-old female patient received bnt162b2 (BNT162B2) lot number: EK5730, intramuscular (left arm), first dose on 16Dec2020 19:00 at a single dose for immunization. Medical history included high blood pressure and known allergies to penicillin and sulfa. Concomitant medication included escitalopram oxalate (LEXAPRO), lisinopril and omeprazole (PRILOSEC [OMEPRAZOLE]). It was reported that about 5 minutes after the injection on 16Dec2020 at 07:15 PM (as reported), the patient got a flushed feeling for a couple of minutes. The patient recovered from flushed feeling for a couple of minutes (16Dec2020). The event was reported as non-serious with no treatment received. The patient had no covid prior vaccination. She had covid tested post vaccination on 18Dec2020 through nasal swab with negative result.	No current illness for this event.	LEXAPRO; PRILOSEC [OMEPRAZOLE]
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907658-1	soreness at the site of injection.; This is a spontaneous report from a contactable consumer, the patient. A 54 year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), lot number EK5730 via an unspecified route of administration on 18Dec2020 at 10:45 (at the age of 54-years-old) as a single dose in the left arm for COVID-19 immunization. The patient had no relevant medical history. The patient had no known allergies to medications, food, or other products. Prior to the vaccination, the patient was not diagnosed with COVID-19. Concomitant medications included loratadine (CLARITIN) from an unknown date and unknown if ongoing, or an unknown indication. The patient did not receive any other vaccines within four weeks prior to the vaccination. On 18Dec2020 at 12:00, the patient experienced soreness at the site of injection. The patient did not receive any treatment for the event. The clinical outcome of the soreness at the site of injection was recovering. It was also reported that since the vaccination, the patient had not been tested for COVID-19.	No current illness for this event.	CLARITIN [LORATADINE]
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907659-1	Fatigue; Nausea; This is a spontaneous report from a contactable consumer (patient) and contactable Other healthcare professional. A 41-year-old female patient received the first dose of bnt162b2 (BNT162B2, lot number: EH9899), via an unspecified route of administration (left arm) on 18Dec2020 08:45 at single dose for immunization. Medical history included endometriosis and allergies to lavender and stevia. Concomitant medication included levonorgestrel for birth control. The patient previously took metoclopramide hydrochloride (REGLAN) experienced allergies. On 18Dec2020 03:00 PM, the patient experienced fatigue and nausea. The most recent COVID-19 vaccine was administered in the hospital. She did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. No treatment was received for the events. The events recovered on unspecified date in Dec2020.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907678-1	"headache; This is a spontaneous report from a contactable nurse (patient) via Medical Information Team. A 31-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; lot number: EJ1685, expiry date: Mar2021), via an unspecified route of administration on 18Dec2020 at a single dose for immunization. The patient's medical history and concomitant medications were not reported. The patient reported that she was experiencing a ""really super bad headache"" on the day of report (19Dec2020) after receiving the covid vaccine the day before (18Dec2020). She took Tylenol and wanted to know if she can take Advil. She was suffering from a terrible headache and did not know if she can take Advil and there was nobody that can tell her whether it was okay with the vaccine. Outcome of the event was unknown."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907679-1	have had a metallic taste since then, it has dissipated slightly; This is a spontaneous report from a contactable health care professional (patient). A 37-year-old female patient received the first dose of BNT162B2 (also reported as Pfizer-BioNTech COVID-19 mRNA vaccine, lot no: EK5730, expiry date: 01Mar2021), intramuscular on the on the left deltoid on 17Dec2020 (reported as 'at about 12:40 PM') at 0.3 mL at a single dose for COVID-19 immunization and ipratropium bromide (manufacturer unknown, specified as non-Pfizer, lot no: 348501, expiry date: May2022), nasal from an unspecified date to an unspecified date, 2 sprays, in each nostril as needed for rhinitis. Medical history included seasonal allergy for which the patient receives allergy injections regularly but have not received one recently or within the last 14 days and ongoing rhinitis. Concomitant medication included fexofenadine hydrochloride (ALLEGRA) and fluticasone propionate (FLONASE [FLUTICASONE PROPIONATE]). The patient stated that she was a healthcare worker and received the vaccine at her workplace. She called as she had a question about a very benign symptom that she was wondering if it's related to the vaccine or if it's something separate. She developed a metallic taste in her mouth about 2 hours after getting the vaccine, it's slowly dissipating but it's still there. She said no one else said that they did have it and actually one other person who she works with said that they also had a slight thing (upon further clarification it was unspecified) but it's not in the list of expected symptoms so she just wanted to call and check. The patient did not receive any treatment for the event. She stated that she also used a nasal spray, Ipratropium Bromide Nasal Solution because she has rhinitis and she did use that and she never had a symptom or side effect with that because she uses it chronically but she did use that right before and noticed the taste develop so she doesn't know if there is a possible interaction between that and the vaccine. That morning she did 2 sprays in each nostril about 6 o'clock in the morning and then she did 2 sprays in each nostril about 2:15 PM and got her vaccine at about 12:40 PM that day. The patient got blood test for serology antibodies on 04Dec2020 with unknown results. The outcome of the event was recovering.	Rhinitis	ALLEGRA; FLONASE [FLUTICASONE PROPIONATE]; ipratropium bromide
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907680-1	sore arm; patient received BNT162B2/ breastfeeding a 14 month old; patient received BNT162B2/ breastfeeding a 14 month old; This is a spontaneous report from a contactable consumer (patient). This consumer reported information about mother and baby. This is the mother case. A 36-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection), via an unspecified route of administration on left arm on 17Dec2020 07:30 (dose number: 1) as a single dose for COVID-19 immunization. The patient's medical history included uncomplicated vaginal delivery (14 month old has no diagnosis. Was born 41 +5. Mother and baby have no issues postpartum). The patient had no known drug allergies. Concomitant medication were not reported. The patient was not pregnant at the time of vaccination and the facility where the most recent COVID-19 vaccine was administered was a hospital. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient did not receive any other vaccines within four weeks prior to the vaccination. Since the vaccination, the patient had not been tested for COVID-19. The patient was breastfeeding a 14 month old. The patient was not having symptoms except for a sore arm on 19Dec2020 (12:00AM). The patient did not receive any treatment for the events. The event was assessed as non-serious. The outcome of the event was not recovered. Information on the Batch/Lot number has been requested.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020504610 baby case	No current illness for this event. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907697-1	"almost unmanageable amount of jaw pain/hurting/terrible pain/jaw is sore/the worst pain ever; almost unmanageable amount of jaw pain/hurting/terrible pain/jaw is sore/the worst pain ever; Jaw is sore and swollen; This is a spontaneous report from two contactable other healthcare professionals (HCP, one of them is also the patient). A 37-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: PF12N EJ1685), intramuscular on 18Dec2020 13:00 at single dose for COVID-19 immunization at a hospital. The patient's medical history included root canal done on 07Dec2020, which was healing nicely with some jaw pain managed effectively with ibuprofen. Sore, easily manageable. Resolving nicely. No known drug allergy. No COVID prior vaccination, the patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. No COVID tested post this vaccination. The patient's concomitant medications within 2 weeks of vaccination included ibuprofen for jaw pain/Sore. No other vaccines in four weeks. It was reported that the patient had an almost unmanageable amount of jaw pain in the ""12ish"" hours after getting the first dose of vaccine. The patient received the vaccine around 1300 on 18Dec and within an hour (at 1400) it started hurting terribly. So much that he wanted to pull the tooth out with pliers. Terrible, terrible pain all through the night that would not abate at all with ibuprofen and ""tylenol number 3"". By morning, the patient started feeling better. Jaw was sore and swollen. Ibuprofen started working again. It seemed to be resolving. The patient saw the dentist urgently that morning and the dentist didn't see anything amiss in the gum line, and had the thought that some systemic response/inflammation in response to the vaccine contributed to this. The patient commented it to be literally among the worst pain he had ever experienced in his life. The outcome of the events was recovered in Dec2020."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907698-1	chill; temp at 1200 was 100.4 and at 1830 101.7; shortness of breath; body aches; headache; This is a spontaneous report from a contactable consumer, the patient. A 59-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE) solution for injection via an unspecified route of administration in the right arm on 18Dec2020 at 16:30 (at the age of 59-years-old) as a single dose for COVID-19 vaccination. The patient was not pregnant at the time of vaccination. Medical history and concomitant medications were not reported. The patient previously took cefadroxil (DURICEF) and experienced allergies. The patient did not receive any other vaccine within 4 weeks prior to the vaccine. Prior to the vaccination, the patient was diagnosed with COVID-19 in Apr2020. On 19Dec2020, the patient experienced chill, temp at 1200 was 100.4 and at 1830 101.7, shortness of breath, body aches and headache. No treatment was provided for the events chill, temp at 1200 was 100.4 and at 1830 101.7, shortness of breath, body aches and headache. The outcome of the events chill, temp at 1200 was 100.4 and at 1830 101.7, shortness of breath, body aches and headache was not recovered. Since the vaccination, the patient has not been tested for COVID-19. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907699-1	heart began to pound; a warm tingling through my abdomen and chest with flushing to my face; a warm tingling through my abdomen and chest with flushing to my face; a warm tingling through my abdomen and chest with flushing to my face; a metallic sort of taste in my mouth; This is a spontaneous report from a contactable consumer (patient). A 32-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685), via an unspecified route of administration on left arm on 18Dec2020 at 10:00 AM at single dose for COVID-19 immunisation at hospital. Medical history included history of svt (supraventricular tachycardia), patient had no allergies to medications, food, or any other products. Concomitant medication included escitalopram oxalate (LEXAPRO), colecalciferol (VITAMIN D) and levocetirizine dihydrochloride (XYZAL). About five minutes after vaccination on 18Dec2020, the patient experienced a warm tingling through her abdomen and chest with flushing to her face, a metallic sort of taste in her mouth and her heart began to pound. The tingling subsided after a couple minutes and heart rate returned to normal over the next 10 minutes. The patient was monitored by the clinic nurses for another 30 minutes before released. The patient felt warm for the rest of the day but no further effects. Prior to vaccination, the patient was not diagnosed with COVID-19; Since the vaccination, the patient hadn't been tested for COVID-19. The patient did not receive any treatment for events. The outcome of events was recovered on 18Dec2020.	No current illness for this event.	LEXAPRO; VITAMIN D (COLECALCIFEROL); XYZAL

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907808-1	I woke up I really tired, tired/I got tired and fatigue; headache; when I came to have my breakfast I felt that food doesn't tastes nor regularly as it was before; This is a spontaneous report from a contactable physician (patient). A 75-year-old male patient received but162b2 (lot/batch number and expiration date not provided), via an unspecified route of administration, on 18Dec2020 (reported as yesterday of 19Dec2020), at single dose, for COVID. The patient medical history included COVID and changing his taste, both in Apr2020 and not ongoing. The patient's concomitant medications were not reported. It was reported that the patient got COVID himself what it started changing his taste in April and he was sick and come to better at the bottom month and he was fine. He started to work full time. Then he got a vaccine yesterday morning and today (19Dec2020) he woke up he really tired, tired. He know these the side effects of vaccine fatigue, muscle pain and headache but these are not he was concerned. The concern is he is losing his taste that he had when originally diagnosed with COVID in April of 2020. When this morning he got up, he got tired and fatigue and headache then when he came to have his breakfast he felt that food doesn't tastes nor regularly as it was before. The same thing he had before when he diagnosed with COVID in April. His question is, probably this is not connected, question is could that be side effects of vaccine or by the he checked his antibody week ago, he had antibody, could that he got another COVID or it is the side effects of COVID Vaccine? It was also reported that the patient deal with COVID patient every day. The outcome of the events was unknown. Information on the lot/batch number has been requested.	No current illness for this event.	No other medications for this event.

The patient did not have a relevant medical history and concomitant medications. On 19Dec2020, the patient had a fever about a 102. The outcome of the event was unknown.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907833-1	the day she got the shot she had arm pain. The next day she had chills, fever and body aches. As of the 23rd she still has body aches.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907835-1	Fever; Mild headache; Fatigue; This is a spontaneous report from the Pfizer-Sponsored program received by a contactable consumer. A 55-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number EH9899 with Expiration Date Mar2021), via intramuscular, on 17Dec2020 at single dose for COVID-19 immunisation. The patient did not have a relevant medical history and concomitant medications.. On 19Dec2020, the patient developed mild headache and fatigue. On 20Dec2020, the patient experienced fever. She stated "I will take some paracetamol (TYLENOL) whatever for next couple days, if it is not then I need to get COVID Test". The outcome of the events was unknown.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907837-1	Patient misunderstood when to return for second Covid vaccine dose. Patient returned for dose #2 four days after dose #1. Screening process did not catch timing discrepancy. Patient received dose#2 four days after receiving dose#1. Patient did not experience any adverse effects from either injection.	none known	none
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907838-1	Headache; This is a spontaneous report from the Pfizer-Sponsored program received by a contactable consumer (patient herself). A female patient of unknown age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via intramuscular, in Dec2020 (three days ago, as reported) at single dose for COVID-19 immunisation. No relevant medical history and concomitant medications were provided. The patient stated she took the COVID-19 shot three days ago and she started having headache. The outcome of the event was unknown. Information on the Lot/batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907842-1	She is not feeling well; Chills; Sweating; Fever; This is a spontaneous report from a Pfizer sponsored program from a contactable consumer reported for her daughter. A female patient of an unspecified age received her dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The reporter She mentioned that the patient got her vaccine this morning and unfortunately the patient was experiencing some side effects or symptoms. The patient who was a nurse who just received the vaccine, the Pfizer vaccine yesterday from the hospital where she worked. And today she was not feeling well, she got chills and she was sweating, and just not well. It sounded like she was having some side effects 30 percent (Further clarification was unknown), to get the Chills and fever, 15 percent of (incomplete sentence). The reporter asked how long they had to wait if someone was feeling unwell from the shot. The patient got to start her 12 hours shift and should she be going back to work and doing 12 hours shift, if she was not feeling well with fever, she had got chills. The reporter asked how long it anticipated her feeling like this. The outcome of the events was unknown. Information about Lot/batch number has been requested.	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907844-1	Pt received the Pfizer-Biontech COVID19 Vaccine, Lot #EH9899 around 1830 today (12/22). A few minutes after the vaccine was administered in the left arm, the patient started having itching on her left shoulder that spread up to her neck. This was followed up by a warm feeling and mild blotching on the neck and face, more so on the left side of her body/face. When the patient brought this to staff attention, we began very close monitoring and started taking vitals regularly. Blood pressure ranging from 141/91 to 139/86, HR ranging from 120-86 bpm. . Around 1905 the patient was given Benadryl 25 mg tabs- 2 tablets by mouth one time only. Around 1908 the patient said her L ear started to itch also. We took vitals multiple times and the blood pressure and heart rate had decreased. Around 1935 the patient said she was feeling better, the mild blotching on the L side of her face and neck had almost completely resolved. The patient stated she felt much better and felt that she can could drive home safely. The patient spent a total time of one hour being monitored. á Of note: the patient admitted that she has white coat hypertension and today it was probably even worse. She said she had a lot of caffeine today and that could have also led to her being tachycardiac.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907845-1	Employee had itchiness and rash on both arms almost 30 minutes after receiving vaccine. She denied shortness if breath, tachycardia, lightheadedness, and difficulty breathing. She denies a similar reaction from any other vaccines.	None	Unknown
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907846-1	Little sinus pressure; may be a little bit of soreness of the throat; Little bit a soreness in throat, scratching of little bit but not too sore; or just allergies; Heart rate low/60 beats per minute. Ache in right side of my ribs; This is a spontaneous report from a contactable consumer (patient). A 53-years-old male patient received BNT162B2 (lot number: EJ1685) via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. The patient medical history was not reported. Concomitant medication included fluticasone propionate. The patient was given vaccine shot (later clarified as Covid 19 vaccine) yesterday and just got a side effects of little sinus pressure, may be a little bit of soreness of the throat. About treatment, the patient took some Advil and he took some sinus pills, congestion pills a little bit earlier. It was clarified as nasal Decongestant, nasal congestion, 30mg, take 2 in 24 hours but he had taken two of them earlier along with 3 Advil pills. He deals with sinus too but this one is like came on pretty much kind of overnight. He was wondering if doing the shot or something, he was not sure what's the matter or just allergies. It was just the sinus pressure yet. He didn't have the fever, not fever. Little bit a soreness in throat, scratching of little bit but not too sore. His heart rate is 60 per minute so it is low, 60 beats per minute, very low. He had just low heart rate though. About lab work the patient stated that went in for side pain, side ache in right side of his ribs. They did ear analysis, CBC. They all came back normal. He just wanted a report in and see he guessed just find it out if the symptoms go away or maybe he is having sinus infection going on or this sinus be going on so. Events outcome was unknown.	No current illness for this event.	No other medications for this event.

Orthopedics Cosigned by: MD at 12/22/2020 49:48 AM á á Patient: Date: 12/21/2020 á Subjective Patient is a 34 y.o. female who was seen at COVID Vaccine Clinic today for her first dose of the COVID 19 vaccination. á á She was given the Pfizer vaccination in the right deltoid muscle. á During her 15 minute waiting period after the injection, the patient began to experience generalized feelings of ""not feeling quite right"" as well as anxiety/nervousness, nausea and chills. She denied difficulty breathing, throat tightness, dizziness, chest pain, or other GI complaints. á This provider noticed her raising her hand from across the waiting area and tended to her where she noted the above complaints. she was then assessed in the emergency bay area. She was monitored for severe reaction symptoms, including rapid progression of symptoms, vomiting, hypotension, chest pain, collapse and Respiratory distress. á Past medical history includes anxiety for which she takes Effexor on a daily basis as well as type 2 diabetes, diagnosed approximately seven or 8 years ago during a pregnancy. She is on oral medication during the day and insulin at nighttime. She did take her oral medication today and last ate a pasta lunch right before arriving to the vaccine clinic. Last A1C was 6.5. Patient states that she generally runs a postprandial blood glucose following a heavy meal of about 180. á She reported a previous history of anxiety and nervousness following vaccinations in the past. Most recently, she experienced a 30-minute period of anxiety and nervousness following her flu vaccine this past October. These feelings passed without further incidents. á Review of Systems Constitutional: Positive for chills. HENT: Negative for drooling, facial swelling, hearing loss, rhinorrhea, sneezing and trouble swallowing. Eyes: Negative for redness and visual disturbance. Respiratory: Negative for cough, chest tightness and shortness of breath. Cardiovascular: Negative for chest pain. Gastrointestinal: Positive for nausea. Negative for vomiting. Skin: Negative for color change, pallor and rash. Neurological: Negative for dizziness, speech difficulty and light-headedness. Psychiatric/Behavioral: Negative for agitation and confusion. The patient is nervous/anxious. á á Objective á She ambulates into the emergency treatment bay under her own power and without difficulty. She is seated on the gurney, and continues to answer questions appropriately. á Physical Exam Constitutional: General: She is not in acute distress. Appearance: Normal appearance. She is not toxic-appearing or diaphoretic. HENT: Head: Normocephalic and atraumatic. Nose: No rhinorrhea. Cardiovascular: Rate and Rhythm: Regular rhythm. Tachycardia present. Pulmonary: Effort: Pulmonary effort is normal. No respiratory distress. Skin: General: Skin is warm and dry. Coloration: Skin is not pale. Findings: No rash. Neurological: Mental Status: She is alert. Gait: Gait normal. Psychiatric: Mood and Affect: Mood normal. Behavior: Behavior normal. á á á Assessment/Plan Stress reaction secondary to vaccine administration and history of anxiety and nervousness following vaccinations. á Vital signs obtained at 1352 with blood pressure at 154/95, mild tachycardia at 109 and 97% O2 saturation on room air. Patient denies any chest pain, shortness of breath time. á She is given a bottle of water and assisted to lie down with the head of the bed slightly elevated. She continues conversating appropriately without any acute distress. Vitals reassessed at 1359 with blood pressure of 133/76, heart rate 97% on room air. Dr. at the bedside now. Suggested obtaining a blood glucose. Blood glucose obtained at 1405, elevated at 234. She continues to deny any chest pain, shortness of breath, chest tightness, swelling in the throat, nausea/vomiting or other GI complaints. á Vital signs checked again at 1406 with blood pressure 133/77, heart rate 107 and 97% on room air. á Vital signs last checked at 1415 to reveal a blood glucose of 219, blood pressure 127/82, heart rate 100 and O2 saturation of 97% on room air. Patient has no additional complaints at this time and reports feeling well. Her mother has driven her to the clinic today. She felt that she was able to safely walk out with any issues. She was assisted by nursing staff and ambulated out of the treatment bay independently. á Treatment included routine surveillance of vital signs at about a 5-minute intervals following notification of her feeling poorly. Vital signs continued to normalize and remained stable through the duration of her 30 minutes following her vaccination. á Follow up response to treatment: excellent. á Patient discharge: Stable to go home and follow up with PCP. Recommend to patient that she present to the ED or call 911 should she develop any symptoms up to and including but not limited to chest pain, shortness of breath, chest tightness, signs or symptoms of angioedema, or syncope. She expresses understanding the above and has no further questions today. á Orders Placed This Encounter Procedures COVID-19 MRNA á PA-C Electronically Signed 12/21/2020 1:51 PM á á"</p>	No current illness for this event. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907956-1	injection site soreness; myalgias; chills; fatigue; nausea; loss of appetite; enanthem (2 oral ulcers); enanthem (2 oral ulcers); This is a spontaneous report from a non-contactable consumer (patient). A 39-year-old female patient started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Solution for injection (lot number: EH9899 and expiry date unknown) via an unspecified route of administration at the left arm on 18Dec2020 12:30PM at a single dose for COVID-19 immunization and monascus purpureus (RED YEAST RICE), via an unspecified route of administration from an unspecified date to an unspecified date at an unknown dose and frequency as supplementation therapy. The patient's medical history included elevated LDL cholesterol and supplementation therapy, both from an unknown date and unknown if ongoing. The patient had no known allergies to medications, food, or other products. Concomitant medications were not reported. The patient did not receive any other vaccines within 4 weeks prior to BNT162B2. The patient only received red yeast rice supplements within 2 weeks of vaccination. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. It was reported that on 19Dec2020, the patient experienced injection site soreness, myalgias, chills, fatigue, nausea, loss of appetite, and enanthem (2 oral ulcers). No therapeutic measures were done in response to the events. Outcome of the events was recovering. The events were assessed as Non-serious. No follow-up attempts are possible. No further information is expected.	No current illness for this event.	RED YEAST RICE
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907957-1	fever; chills; malaise; This is a spontaneous report from a contactable physician (Patient) via Pfizer-sponsored program. A 27 year-old-male patient received BNT162b2 (PFIZER-BIONTECH COVID-19 VACCINE) on 18Dec2020 at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient experienced fever and chills on 18Dec2020 (in the night); the patient also experienced malaise throughout the weekend (in Dec2020). Patient had vaccine on 18Dec2020 and was still having symptoms 3 days later. As of 20Dec2020, patient stated he was feeling better but wanted to know if he should get tested or did the vaccine cause these symptoms. Final outcome of the events was reported as unknown. Information on the lot/batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	907958-1	"Experiencing burning while urinating: This is a spontaneous report from a contactable consumer (patient who is Nursing assistant). This 56-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot # EK5730), via an unspecified route of administration, on 19Dec2020 approximately at 10:00 AM (age at vaccination 56-years-old) at single dose for COVID-19 immunisation. Medical history included blood pressure. Concomitant medications included losartan for blood pressure and colecalciferol (VITAMIN D). The patient experienced burning while urinating on 19Dec2020 afternoon after she came home and on 20Dec2020 morning too. About treatment consumer stated: ""Not really, long time ago I had that but yesterday I did like oh"". The patient had complete blood count (CBC) and C-reactive protein (CRP) test, results are unknown. Outcome was not recovered. Next shot is due on 09Jan2021." COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	908015-1	Got the vaccine at 11AM. around 3PM very tired, headache wok me up around 3AM next morning I was fatigued, felt hot and cold (couldn't decide if I needed a jacket or not while at work), very tired, the next day still fatigued, chills, hot and cold, went to work and decided to leave after talking to one of the doctors. I was clammy, very sluggish, had a very mild headache, did not feel well overall. That was the worst day for me (Friday). My ears felt plugged. Slept almost entire day going through cold/hot chills, even wore 4 layers of blankets. Back and forth with hot and cold chills. Next day ear pain and fatigue. Very mild hot and cold flasher.	no	prozac, B12
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	908021-1	I have been experiencing intermittent, involuntary twitching of my my left thumb that started around 12:00 noon. There is no numbness or tingling (normal injection site ache, however) or recognizable pattern of when the twitching occurs, and the twitching does not seem to last longer than 10 seconds at the most before stopping. 1-3 minutes will pass before my thumb starts twitching again. Other digits do not seem to be affected. I did not experience this prior to the COVID-19 vaccine administration and not have any neurological conditions that this would be a symptom of. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	908034-1	At exactly the 10 minute mark, I started feeling very flushed and hot. 1-2 minutes later, I was very lightheaded and dizzy. Felt like my heart was going to beat out of my chest and that I might faint. Walked down to tell the RN and she could tell I didn't feel well as I approached. She said she could see my pulse bounding in my neck. Asked me to sit down arm she checked my pulse. Said I was tachycardic, over 100bpm. She asked me to sit there another 15 min for observation and gave me some water. I started to feel less flushed but then a second round of flushing came. The bounding/tachycardic episode never stopped. They suggested I go to the ER for observation. I text the Dr I was working with and she came down and spoke with the vaccine nurses saying she was comfortable monitoring me for the next several hours. I continued to feel this way for 3-4 hours. Also very pale and shaky. The above symptoms finally lessened around lunch time. For the remainder of the day, I felt very exhausted and had a lingering headache. The next day (today) I feel better. Other than soreness in the injection arm and some general body aches.	None	Lexapro 20mg qd Doterra lifelong vitality vitamins qd Doterra PB Assist Probiotic qd Doterra Adaptiv qd CVS calcium, zinc, magnesium 3 pills qd CVS B12 qd

Symptoms very mild, sore throat, slight headache, loss of taste, fever <99.9.	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	908056-1	Approximately four minutes after receiving the vaccine, I felt dizzy while I was seated. The feeling subsided and returned a couple more times within 15 minutes. After approx 10 min, I felt a burning sensation on the top of my right hand and it spread to both hands and arms. My skin looked a little blotchy and red. The girl next to me said my face looked flushed. I also noticed I was sweating. The RN brought me a bottle of cold water to drink. I drank half the bottle and that seemed to help cool off my skin. Thereafter, I had the chills. Then I noticed a tingling sensation in my feet. My shoes started to feel uncomfortably tight, so, I loosened my shoe laces. That subsided after a while. After sitting for a few more minutes, I believed I was feeling better. I stood up to prepare to leave and I felt a little bit dizzy. I sat down again, notified the RN and waited some more. I tried to stand up again and I felt slightly dizzy again . I remained standing and I was talking with two RNs. At that moment, I became dizzy again. I remained seated for another period of time before being escorted by the RN back to my department where I sat down and ate my lunch. Thereafter I was fatigued with the occasional chills and hot spells . I went home and rested on my couch.	None	Hormone replacement meds that I take the night before. I usually take multi vitamins every morning, however I did not take them on the day is my vaccine.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	908057-1	After receiving the vaccine I initially had some arm soreness that later progressed to a headache and just an overall run down feeling with some slight body aches. I woke up for work this morning with worsened body aches and had felt like I had a fever throughout the night. I took my temperature just to be safe and it was 100.5 (take twice). I called into work and was told I was not allowed to come in today to contact employee health. I went back to sleep and now my temperature is 98.6. I still have some slight body aches but it seems improved. I am sending this email at your request to state that I no longer have a fever as result of my COVID vaccine obtained 12/21. My temperature has returned to a range of 98.2-98.6. Sx resolved	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	908108-1	Patient presented to the ED vaccination clinic on 12/20. She received her first dose of the vaccine, and then went into the breakroom to finish the rest of her lunch break. Approximately 10 minutes after she received her vaccine, she noticed she was feeling very warm, like a hot flash. She asked her coworker if it was hot in the breakroom, who responded no. She then noticed that she was developing red spots on her chest, back and neck. We moved her into a private area to monitor her, and allow her to undress and cool off. She developed redness to her chest, back, neck, and redness around the injection site. This mostly resolved within 45 minutes. At about 45 minutes, I was able to secure PO Benadryl and provided her 50 mg of Benadryl, which she took. The employee returned to work the rest of her shift with no other complications noted. The employee denied swelling or itching to the throat, denied SOB, and her vital signs were normal the entire time. The employee does want to get her 2nd dose of the vaccine, so we will plan on administering it in the ED, and may pre-medicate with Benadryl.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	908261-1	Hot; Cold sweats/having night sweats, like she was hot and cold; Cold sweats/having night sweats, like she was hot and cold; Chills; Shakes; intense nausea/nauseous; just feels nauseous and depleted; it feels like she has the flu; she didn't know if maybe her body was low on oxygen, she didn't feel out of breath, but she just didn't feel well overall; This is a spontaneous report from a contactable other healthcare professional. A 27-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number: EH9899, expiry: Mar2021), via intramuscular route of administration (left deltoid) on 17Dec2020 17:40 at a single dose for COVID-19 immunisation. The patient's medical history included sulfa drug allergies. There were no concomitant medications used. The patient was having some intense nausea, and throughout the night, she had night sweats. It was further stated that she woke up a 12AM, today (18Dec2020), and she just felt like she had the flu. She was nauseous, and she was having night sweats, like she was hot and cold, and she tried to go back to sleep, but then she had an episode of chills and the shakes, and every time she was about to fall asleep, it was like her body would wake her up. Patient stated that in her mind, she didn't know if maybe her body was low on oxygen, she didn't feel out of breath, but she just didn't feel well overall. All these persisted until about 3AM, and then she went back to sleep. She woke up for the day around 530AM, and she feels a little better now, like she doesn't have the hot and cold fever feeling anymore, she just feels nauseous and depleted. She stated that she sees on her information sheet that these are possible side effects to getting the vaccine, but it feels like she has the flu. Outcome of the events was unknown. Follow-up attempts are completed. The following information on the batch number has been requested.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	908264-1	dry cough; low grade fever/he had a low grade temperature of 99.0 Fahrenheit last night and 101.0 Fahrenheit this morning; body pain; body weakness; This is a spontaneous report from a contactable Nurse A 50-years-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in the left arm on 16Dec2020 10:30 at single dose for covid-19 immunisation. Medical history was none (no relevant patient or family medical history). The patient's concomitant medications were not reported. On 17Dec2020 the patient experienced low grade fever, temperature of 99.0 F on 17Dec2020 and 101.0 F on 18Dec2020, body pain and weakness with outcome of not recovered. On unknown date the patient experienced also cough with unknown outcome. The event fever was considered serious as medically significant and was reported as worsened. The reporter wanted to know what to do. The caller read somewhere not to take Tylenol, though he did take one this morning. He was to increase fluid intake but what other treatment was recommended. Information on Lot/Batch has been requested.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, fever, body pain, cough and weakness there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	908267-1	Nausea; Vomiting; Chills; Migraine like headache; This is a spontaneous report from a contactable consumer (patient). A 32-year-old female patient (not pregnant) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, batch/lot number: unknown), via an unspecified route of administration (left arm) from 18Dec2020 (01:15 PM) to 18Dec2020 13:15 at single dose for COVID-19 immunization. The patient's medical history included PDA (Patent ductus arteriosus) ligation, fatty liver disease, and anxiety. Concomitant medications included melatonin, escitalopram oxalate (LEXAPRO), bivalisate sodium (BALZIDE), multivitamin, and probiotic. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. No known allergies. The patient was not diagnosed with COVID-19 prior to vaccination. The patient has not been tested for COVID-19 since the vaccination. The patient experienced nausea, vomiting, chills, and migraine like headache the night after she received the vaccine (18Dec2020 07:00 PM). There was no treatment received for the reported adverse events. The outcome of events was recovering. This case is reported as non-serious. Information on the lot/batch number has been requested.	No current illness for this event.	; LEXAPRO; BALZIDE
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	908268-1	body ache; muscle and joint pain; muscle and joint pain; fever; injection site pain; chills; headache; This is a spontaneous report from a contactable consumer. A non-pregnant 20-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EJ1685), via an unspecified route of administration in the right arm on 18Dec2020 10:15 at single dose for COVID-19 immunization. Medical history included COVID-19 (prior to vaccination). Concomitant medication included ethinylestradiol, norgestimate (SPRINTEC). No other vaccinations were given within four weeks and the patient had no known allergies. On 18Dec2020 23:30, the patient experienced body ache, muscle and joint pain, fever, injection site pain, chills and headache. No treatment was received for the events. The clinical outcome of body ache, muscle and joint pain, fever, injection site pain, chills and headache was recovering.	No current illness for this event.	SPRINTEC
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	908270-1	Fever; Shortness of breath; Headache; Muscle ache; This is a spontaneous report from a contactable consumer (patient). A 24-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: EH9899, expiration date unknown, 1st dose via an unspecified route of administration on 18Dec2020 14:00 at a single dose at right arm for COVID-19 immunization. Medical history included penicillin allergy. There were no concomitant medications. The patient experienced fever, shortness of breath, headache and muscle ache on 19Dec2020 01:00 am. There was no treatment received for the events. The patient underwent lab tests and procedures on 19Dec2020 which included COVID test post vaccination (Nasal Swab): unknown result (pending). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine and no other medications received within 2 weeks of vaccination. Prior to vaccination, the patient was diagnosed with COVID-19 and since the vaccination, the patient has been tested for COVID-19. The action taken in response to the events was not applicable. The outcome of the events was recovering.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	908282-1	"Felt lightheaded and dizzy; Felt lightheaded and dizzy; skin pale; very fatigued; she was currently breastfeeding; she was currently breastfeeding; This is a spontaneous report from a contactable health care professional. A 34-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), intramuscularly on 18Dec2020 (at the age of 34-years-old) as a single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. It was unknown if the patient received any other vaccines within 4 weeks prior to the vaccination. It was unknown if the patient was pregnant at the time of vaccination. Prior to vaccination, it was unknown if the patient was diagnosed with COVID-19. On 18Dec2020, the patient felt lightheaded and dizzy and was brought to the observation area, ambulatory. She denied shortness of breath, itching or difficulty swallowing. No rash was noted, but the skin was pale. Water was provided to the patient. It was reported that the patient was currently breastfeeding, was very fatigued, probably dehydrated and had not eaten breakfast. She stayed in the observation area until 10:37, drank a total of 3 bottles of water and was up to the restroom ambulating on her own. Her blood pressure was 131/83, heart rate was 83 and "100% on RA" as reported. She left ambulatory to drive home and was informed to notify the appropriate person of this episode prior to a second dose of vaccine. It was unknown if treatment was received for the events "felt lightheaded and dizzy", "skin pale", and "very fatigued". Since the vaccination, it was unknown if the patient had been tested for COVID-19. The patient recovered from the events "felt lightheaded and dizzy", "skin pale", and "very fatigued" on an unspecified date in 2020, while the clinical outcome of "she was currently breastfeeding" was unknown. No follow-up attempts are possible; information on lot/batch cannot be obtained.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020504266 mother/baby case, same reporter /drug , different patient"	No current illness for this event. A 30-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, Lot EK5730) solution for injection intramuscular in the left arm on 20Dec2020 at 12:30 (at the age of 30-years-old) as a single dose for COVID-19 vaccination. The patient was not pregnant at the time of vaccination. There was no medical history. There were no concomitant medications. The patient had no known allergies to medications, food, or other products. The patient did not receive any other vaccine within 4 weeks prior to the vaccine. Prior to the vaccination, the patient was not diagnosed with COVID-19. On 20Dec2020 at 12:30, the patient experienced arm felt tingly after. No treatment was provided for the event arm felt tingly after. The outcome of the event arm felt tingly after was recovered in Dec2020. Since the vaccination, the patient has not been tested for COVID-19. No follow-up attempts are possible. No further information is expected.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	908287-1	"patient's several members of family tested positive for COVID 19 virus and was potentially exposed; it was like she got the flu/whole flu like symptoms; Sore throat; Joint ache; Body ache; Low grade fever; Running nose; Terrible headache; Laryngitis; Muscle ache; Loss of smell; Chest discomfort; Joint discomfort; This is a spontaneous report from a contactable nurse. A 53-year-old female patient started to receive bnt162b2 (reported as Pfizer-BioNtech vaccine; lot number: EH9899), intramuscular on left arm on 18Dec2020 at single dose for COVID-19 immunization. Medical history included migraine, arthritis, gastritis, and esophageal spasms all from unknown dates and unknown if ongoing. Concomitant medications included dicyclomine, biotin, tocopherol (VITAMIN E [TOCOPHEROL]), and ergocalciferol (VIT D). Patient reported getting the vaccine and is now having a reaction. Patient stated that she got the COVID vaccine on 18Dec2020 at 7 in the morning and she started to get sick 5 in the morning the next day. Patient stated she worked night shift the next day and got sick and it was like she got the flu from the shot. When the above concern was paraphrased, the patient stated, ""Yes I had all of my joint ache, body ache, I had low grade fever, running nose, terrible headache, just whole flu like symptoms"". The patient was informed the role of the Pfizer Drug Safety and permission to probe was asked from the patient. Patient also stated, ""Yes, I always get my flu shot every year for many years, two other times I have been sick from the flu shot (Further clarification was Unknown) and it was like this it was like the flu and I believe this because of the shot but you know I mean I still think it would have been, I think it is better than having received COVID itself"". Patient mentioned taking turmeric. Patient mentioned that she had a COVID test done on Thursday at the clinic that she works at and that must have been negative because nobody contacted her and it was just they do random testing because of the patients she works with. Patient further stated ""I got my vaccine between 7-8 am mornings Friday morning and then around 5 am on Saturday morning, I started feeling really bad and then when I woke up at 4 in the afternoon I was done. It is probably, yes 18Dec, 7 or 8 in the morning I got the shot and then 19Dec at 5 am is when I started getting sick, by the evening I was full grown sick and I had to call I am sick because I couldn't pull another 12 hour shift"". The patient also reported that she was much better today (unspecified date), had a sore throat and headaches but her joint pains were better, and she has no fever not even low grade fever. It was further stated that the patient received first dose of Pfizer-BioNtech vaccine on Friday 18Dec2020. Developed symptoms on Sat 19Dec2020 which included ""sore throat, laryngitis, muscle ache, loss of smell, chest discomfort, low grade fever, joint discomfort"". Patient mentioned that she took Theraflu and NyQuil. Patient also stated, ""And the only other question is because when I called up to work to tell them to give me COVID a day for COVID pay because it was COVID related and they said they were not sure if they could. This is COVID related they should pay me for a day of COVID pay, correct. Who would know that?"". It was also found out ""recently"" that patient's several members of family tested positive for COVID 19 virus and was potentially exposed. It was asked that if patient gets tested for COVID virus, will she be positive because of receiving the Pfizer-BioNtech vaccine and can patient test positive for COVID 19 virus after receiving the Pfizer-BioNtech vaccine. Outcome of the event 'Low grade fever' was recovered, unknown for event 'patient's several members of family tested positive for COVID 19 virus and was potentially exposed', while recovering for the remaining events." COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	908626-1	Progress Notes PA-C (Physician Assistant) ? ? Orthopedics Cosigned by: MD at 12/22/2020 49:46 AM Expand All Collapse All 12/21/2020 á Patient: Date: 12/21/2020 á Subjective Patient is a 58 y.o. female who was seen at COVID Vaccine Clinic today for her first dose of the COVID 19 vaccination. á She denied any history of previous adverse reactions to vaccines. á She was given the Pfizer vaccination in the left deltoid muscle. á During her 15 minute waiting period after the injection, the patient began to experience dizziness/shakiness. This provider was notified of patient reaction and she was then transferred to the emergency bay via wheelchair where she was assessed. Monitored patient for severe reaction symptoms, including rapid progression of symptoms, respiratory distress with dyspnea, increased work of breathing, persistent cough and cyanosis, vomiting, hypotension, dysrhythmia, chest pain and collapse. á She denied difficulty breathing, throat tightness and tongue swelling, nausea. á She reports a history of atrial fibrillation and states that she had a procedure in the past and the anesthesia provider questioned her about this diagnosis. She reports taking metoprolol and methimazole on a daily basis. She took all of her am medications today, including an 81 mg aspirin. Reports history of watery eyes and blurred vision, takes Zyrtec daily. Denies any worsening of these symptoms outside of her baseline. Denies use of anticoagulant use or diabetes. Last ate and drank about 1130 or noon. á Review of Systems Constitutional: Negative for diaphoresis. HENT: Negative for congestion, drooling, facial swelling, rhinorrhea, sneezing and trouble swallowing. Eyes: Positive for discharge. Negative for redness. Respiratory: Negative for chest tightness and shortness of breath. Cardiovascular: Negative for chest pain and palpitations. Gastrointestinal: Negative for nausea and vomiting. Skin: Negative for color change, pallor and rash. Neurological: Positive for dizziness and headaches. Negative for syncope. Psychiatric/Behavioral: Negative for agitation and confusion. The patient is not nervous/anxious. á á á Objective Vitals There were no vitals filed for this visit. á á Physical Exam Constitutional: General: She is not in acute distress. Appearance: Normal appearance. She is obese. She is not toxic-appearing or diaphoretic. HENT: Head: Normocephalic and atraumatic. Nose: No rhinorrhea. Eyes: Comments: Watering of both eyes Cardiovascular: Rate and Rhythm: Normal rate and regular rhythm. Comments: At right radial pulse Pulmonary: Effort: Pulmonary effort is normal. No respiratory distress. Skin: General: Skin is warm and dry. Coloration: Skin is not pale. Findings: No rash. Neurological: Mental Status: She is alert and oriented to person, place, and time. á á Assessment/Plan Stress reaction following vaccine administration. á Patient was transported to the emergency bay via wheelchair. á Treatment included no therapy, but did continue with vital checks at approximately 5 minute intervals. á 1603-blood pressure using the large adult cuff was 154/60 with large adult cuff, heart rate 69 with regular rate and rhythm at right radial pulse. 96% O2 sat on room air. Patient continues to feel slightly dizzy and shaky though denies any chest pain, shortness of breath, swelling of the lips or tongue. á 1611 vital signs reassessed with blood pressure of 150/63, heart rate 64, 97 percent on room air, continues to feel slightly dizzy/shaky, though, reports not nearly as bad. Patient continues to answer questions appropriately and is talking without any signs of further decompensation. á 1618-reports feeling better. Vital signs rechecked with BP of 121/55, 59 heavy rate and 96% RA. No new complaints. á 1624- patient reports a slight headache, but denies chest pain, shortness of breath, chest tightness, lip or tongue swelling. á Discharge vitals obtained at 1626-with blood pressure of 135/55, heart rate of 58, 95% on RA. No new complaints, except feeling a bit cold. Patient reports feeling better and feels that she can safely discharge. Discussed need for urgent evaluation at the emergency department or to call 911 if symptoms of chest pain, shortness of breath, angioedema present. Patient expresses understanding and all questions were answered to her satisfaction today. á Follow up response to treatment:excellent. á Patient discharge: Stable to go home and follow up with PCP. á Orders Placed This Encounter Procedures ? COVID-19 MRNA á á PA-C Electronically Signed 12/21/2020 4:05 PM á á	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	908905-1	Fatigue, nasal drainage, no treatment, resolved	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	908907-1	Parasthesia in left arm within 5 minutes of vaccination. Parasthesia radiated into fingers (tingling but not painful). Parasthesia in left arm resolved in about 1 hour with no treatment. Parasthesia in tongue within 5 minutes of vaccination. Parasthesia in tongue (tingling but not painful) lasted through the evening (~5 hours). Resolved without treatment. Heartbeat increased (bounding heartbeat) onset within 5 minutes of vaccination; resolved within 5 additional minutes with no treatment.	None	Ocella OCP, multi-vitamin, melatonin, Vitamin C, Vitamin D
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	908908-1	Was scheduled for 3:10 yesterday and received it at 3:25 ish. Did fine at first ? a little flushing/burning around neck and chest about 35 minutes after but then around 10:00 pm I had a full on inflammatory response throughout the entire body. Thankfully it was evening/bedtime but it was an awful night with significant pain everywhere with any kind of movement. Mild headache that has been intermittent. I wouldn't call it true chest pain but did have intermittent, weird stabbing pains in chest at times. I dosed up on gallons of water and Tylenol and certainly felt better by around 7:00 a.m. but if that was my response to round one I am hesitant to go back for seconds.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	908909-1	The first 5 mins felt dizzy like small fainting I started relaxed. I went home took shower I had a mild fever took Tylenol. The next day some headache and weakness. On day 2 mildness and weakness again. Then on day 3 fever and weakness was almost gone and headache is still there.	No	No

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	908912-1	After 15-20 minutes of receiving the vaccine I began to have tingling in my lips that felt almost numbing but not quite. This progressed into my mouth with the slight swelling of my tongue and lips. I had incredibly dry mouth as well. Felt very thirsty. I was given a Zyrtec (10mg I think). Swelling and numbness never progressed into anything serious, could swallow and speak fine. Did develop a small rash on my forehead that went away about an hour after the Zyrtec. 30 minutes after taking the Zyrtec the tingling and swelling in my mouth and lips subsided. Around 7pm my cheeks and face felt tingly so as recommended I took a benadryl. In the morning all symptoms were non existent.	none	Mirena IUD, Tylenol
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	908914-1	numbness and tingling in both hands. after 5 minutes it spread to her body, tongue and lips. Maybe after an hour, left side of face was numb for a little while. Today, feel ok, except left hand still feels the same.	no	no
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	908920-1	numbness soon after vaccine, as the day progressed difficult elevate left arm, resolved by next morning	None	Metoprolol
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	908921-1	Febrile 101.3F, body aches and chills.	None.	Multi-vitamin, B12 supplement, biotin supplement and vitamin D supplement
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	908922-1	She got very light headed immediately after vaccine was given. We had her sit and gave her a cold ice pack and bottle of water. I went to get her crackers as she said she didn't eat much today and when I got back from grabbing crackers my intern was attending to her and she ended up throwing up. She continued to throw up and still felt lightheaded for about 20 minutes. I monitored her and she ate a few crackers and had more water and then she started feeling better. No medical treatment was needed. Continue to monitor for remainder of 30 minutes after vaccine.	None.	Unknown

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	908976-1	50Y female, with history of PTSD, anxiety and afib. Was seen in covid vaccine clinic during her break on 12/24/2020 at 1113, for covid 19 vaccine. At 1133, she reported scratchy throat and felt her heart was racing. Heart racing symptoms lasted only for a few minutes and then resolved. She reports mild scratchy sensation with swallowing. Reports that she had a lot stress since start of shift today. Also admits to stress while sitting in the clinic for observation, stressors include work related stress and responding to multiple phone calls related to codes. She was on the phone with husband prior to symptoms onset. She denies shortness of breath, dizziness, wheezing, chest discomfort, palpitations, change in vision, weakness or fatigue. She denies history of hypertension. Was previously on coumadin and diltiazem. But currently not on any medications. O: VS at 1140: BP 166/104, HR 75, O2 97% RA 1150: 164/93 HR 70 O2 99% RA 1158: BP158/83 HR 70 RR 17 O2 98% RA 1210: BP 147/82 HR 64 RR 15 O2 100% RAAOx4. Employee was teary and anxious. Follow commands. Lung sounds clear. Heart sounds normal. No focal weakness, numbness, tingling. No respiratory distress. Able to tolerate fluids. A: Allergic reaction to COVID 19 vaccine. P: Employee was closely observed in clinic for an hour. Employee was provided fluids and emotional support. Symptoms gradually resolved. Her vital signs stabilized. Benadryl was offered but not given because employee reports symptoms improved and wanted to return to work. Employee was advised to monitor her symptoms. If her symptoms recur, she needs to go to urgent care or ED. Advised her to follow up with her PCP for further evaluation of her blood pressure and PTSD. She stated understanding and agreeable to plan. Employee returned to work and left in stable condition.	No current illness for this event.	None

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	909076-1	I woke up around 4am at night because my feet were tingly, like pins and needles. At first I thought maybe I was wearing tight socks, so I took them off, but it wouldn't go away, so then I thought maybe it's just how I have been sleeping so I woke up and started to walk around. I noticed that my feet weren't only just tingly, but they also felt heavy to walk around. It felt like someone had put weights on my feet, and I could hardly pick them up to move. This was on going for about 45 min until I panicked, and I called the ER. They told me since there wasn't much information about adverse effects from the vaccine to just monitor it, and if it didn't go away to go to the ER. It did take about 3 to 4 hours for the sensation to leave. It did gradually fade, so it wasn't the same height of sensation the whole 4 hours.	none	IUD- Levonorgestrel

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	909581-1	I am experiencing nausea, diarrhea, and a migraine.	cover 19/sars cov2	amlodipine 5 mg; Zyrtec 10mg
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	909585-1	About 12 hours after receiving the vaccine, woke up to use the restroom and while standing in the bathroom, I became dizzy, lightheaded, weak, and fell to the floor. My spouse was able to arouse me after a few attempts at shouting my name but informed me that I had lost all the color in my face, lips and face were very pale. I laid on the floor for approximately 30 minutes until I was able to sit up & stand without feeling lightheaded and dizzy.	None	Desvenlafaxine 25 mg at bedtime Lo-Lo Estrin Fe 1 tablet at bedtime (on active pills at time of vaccination)
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	909591-1	Covid vaccine received, was instructed to go to ? observation area? for 15 minutes. While walking, started to feel faint, sat down and started to feel okay. After 5 minutes, I started to feel faint again and felt my heart rate go up. My Apple Watch showed my heart rate at 144. I asked staff to check my vitals and I was instructed to go to the nurse area. Vitals showed heart rate of 140s-150 (Apple Watch registered my highest heart rate during that period was 160). Blood pressure about 135/90 (my normal is 115/80), SpO2 of 99%. After 5 minutes, heart rate down to 90, BP 120s/90s. Every 5-10 minutes I would feel faint, a sense of ? impending doom,? mild nausea, and my heart rate would go up to 140s, it would last about 2 minutes then go down to 90s. This cycle of heart rate going up and down kept repeating for 30 minutes. No chest pain, no shortness of breath. Prior to going home, heart rate was 90, blood pressure was 125/98. Total time being observed was 40 minutes from time of vaccine to leaving observation.	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	909600-1	At approximately 11:30PM on 12/25/20, pain in my left axilla woke me from deep sleep. There was (s) a palpable, painfull swollen lymph node . It remains painful at the time of reporting (12/27/20 12noon). The pain is temporarily relieved with NSAID. Other than pain, there are no other associated symptoms. I had mild pain at injection site on day 2 but no other notable events following vaccination on 12/19/20. I will send a message to Dr , (my PCP) but do not think a visit will be necessary. I am scheduled for my second vaccination on 01/08/21 and intend to get it - in my right arm.	None	Ambien 2.5 QHS Wellbutrin 75 BID Naproxen 200 BID PRN Tylenol 650 TID PRN Aspirin 81mg QD Loratadine 10 PRN QD Vitamin C 3000 QD Vitamin D3 Zinc AREDS2
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	909603-1	About half hour after vaccine had a headache woke up with a 100 temp fever. The next morning fever went away. The night of 12/18 my temp was 102, temp, lost taste/smell and felt fatigue. On 12/19 I went to get a Covid Test results positive. The week of 12/21 started to feel better and then on 12/26 OT started dropping. I had to miss 5 days of work.	No	No
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	909604-1	About 10 minutes after receiving the injection I felt tightening in my throat. I then felt a hot flush all over, and some chest tightness. I notified one of the nurses at the site who took my VS: BP 200/100, P 100, R 22, O2 sat 99%. Symptoms resolved in about 20 minutes. I went back to work when the symptoms returned. As I was walking to the site where the injections were being given I saw a pharmacist from the hospital. He took me to the pharmacy and recommended Benadryl. Since I was at work and Benadryl makes me sleepy he gave me another Claritin, knowing I had taken one that morning. He also suggested that I use my Albuterol inhaler, which I did. Symptoms resolved within the hour.	Sinus allergies acute COPD chronic (never smoked), diagnosed 2 years ago	Claritin 10 mg po QD Singulair 10 mg po QD Wixela inhaler 500/50 one puff BID Flonase 50 mcg two sprays BID

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	909613-1	Pfizer-BioNTech COVID-19 Vaccine EUA headache, swollen L tonsil and L ear ache for 4 days post-vaccine; symptom treatment with Dayquil and Nyquil. resolved without further treatment	none	DHEA, CoQ10, prenatal vitamins, vitamin D
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	909618-1	Fever (100.4), chills, myalgia on the next day.	none	multivitamin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	909619-1	On 12/22/2020 between 2000-2100, while driving, I experienced a definite notice of sensation of absence of my heart beating between 6-10 times. At one point, I was able to safely pull over, but by that point my right radial pulse palpated was 60 bpm and strong. Prior to this time but after the vaccination, I had felt instances of a similar lack of sensation but am not sure of the times, had paid little attention to the events ? presumably because they were very very short and, though not driving, I was never able to catch them/i.e. palpate my heart rate during the events. On 12/23/2020 at 2005, I again sensed my heart wasn't beating. I immediately attempted to palpate my right radial pulse and felt no pulse for at least 3 seconds (I was not watching a clock to time). After the 3 seconds, I could suddenly feel a strong right radial pulse, HR was 56 bpm (my pre-vaccine HR). I had not taken my evening dose of Propanolol.	None	Propanolol 80 ER po BID (promptly every day at 1000 & 2200). Klonopin 0.5 mg po tid prn lack of fine motor skills while working (which is 2 days/week - and I wasn't work on day of vaccination or events here described).
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	909620-1	"I received my first dose of the Pfizer vaccine through employee vaccination for medical center at about 6:45 pm on 12/16/2020. The same evening, I had no side effects to report. The next morning, on 12/17/2020, I woke up with a sore arm (know this is a common complaint). As the day progressed on 12/17/2020, I became fatigued and developed joint aches. Took a normal dose of Tylenol, took a bath, and went to bed. Went to work at the hospital the following day, on Friday, 12/18/2020. Was fatigued for my twelve hour shift on 12/18/2020. Following my shift on 12/18/2020, I came home, ate a little supper, showered, and went to bed. I did not have much of an appetite at this time. The following morning, I woke up with vertigo, dizziness, slight nausea, and felt a little shaky. I informed my workplace that I did not feel well and my charge nurse instructed me to "see how it goes." I proceeded to go into work at 0630 that morning on 12/19/2020. Upon arrival at work, I stated that I did not feel well or normal and I was instructed to call the employee health hotline to report my symptoms. I did and spoke with a woman, over the phone. She instructed me to go get a COVID test to confirm I did not have COVID. I told her that I really felt like it had to be from my vaccination, but she insisted I get tested for COVID. She scheduled me an appointment at a walk-in across from our hospital and I went and was tested. I went home to wait for my results and ended up missing the rest of my twelve hour day shift. My test came back negative later that day, the following days, until 12/26/2020, I had nausea when I would wake up. I still had some vertigo and dizziness and fatigue. Today, 12/27/2020, I have felt better. I am a little scared to get my second dose and wanted to report what I experienced."	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	909622-1	Headache, fatigue, body aches, sharp abdominal pains	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	909623-1	Progressive and fluctuating hives and red rash on the shoulders, chest, abdomen, back, and upper thighs. Began on December 25 in the afternoon lasting about 30 hours, waxing and waning until a final flare-up in the PM in December 26. No more symptoms Dec. 27	N/a	Mirena IUD
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	909626-1	N/V with severe diarrhea approximately 24 hours after vaccine administration. Symptoms lasted for 36 hours and resolved.	None	Aspirin, escitalopram, Losartan, Lipitor
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	909630-1	On the day of my injection approximately 20 minutes later i had tingling down the arm I received the vaccine in and in my face which lasted for about 2 hours but went away. Other symptoms began 12/25/20 including body aches, fatigue, chills, and fever.	None	Birth control
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	909631-1	I am 67 year year old physician and have been inline distance skater for more than 30 years. I normally skate 3-4 times per week ~ 15 miles over about 90 minutes. I only walked for the two days after I received the vaccine (about 5 miles each time) and developed some low grade myalgias following which responded to 600 mg. of ibuprofen. On December 26, 2020 (approximately 72 hours post vaccination) I skated about 15 miles and upon returning home developed more intense systemic myalgias, nausea, fatigue, and general malaise which lasted about 12 hours. Today (December 27), the myalgias resolved. I have never had anything like this before. Since I see firefighters in my practice on a regular basis (as well as other first responders) I was concerned that coincidentally I actually developed Covid. I feel fine now but will get a Covid test on December 28 through my office. Curious if others reported similar side effects after the vaccine with vigorous exercise?	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	909633-1	Chills and fever for 3 days. Chronic Fatigue and headache starting on 12/25 until today (12/27)	NA	N/A
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	909634-1	Dizziness, numbness hands & feet (feeling cold) for 2 hours, extreme thirst, chills for 6 hours, injection site pain 2 days	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	909637-1	Site pain, fever to 102°F for 2 days, body aches, headache, fatigue, and weakness	No current illness for this event.	ToprolXL, benazepril, hctz, flexeril, hydroxychloriquin, etidolac, women senior multi vitamin, ca + vit d
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	909638-1	10 minutes after the injection while I was sitting and relaxing, I felt my feet tingling with a pins and needles sensation. They also felt cold. The pins and needles and coldness then shifted to my hands as well. It also happened in my lips and nose. I occasionally felt a cold tight feeling in my chest. I felt a little weak and shaky, like maybe I would faint but I did not. This did not improve with eating some candy and drinking water. I later felt anxious but the anxiety was brought on by these symptoms, as I was definitely not feeling anxious prior to the tingling. I tried resting and that did not resolve it. It just eventually stopped after about 6 hours.	None	Protonix, Mirena IUD, caffeinated beverages

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	909953-1	Hello I received my Covid Vaccination on 12/23/20 7:56 am at Healthcare Clinic. I waited 15 minutes after the vaccination and then went and stayed home. Six hours later my arm started to become very painful (no surprise) I then felt an overwhelming fatigue and sadness. I had tears just streaming down my face for about 3 minutes. I laid down and awoke later that night still feeling very fatigued. I showered and crawled back to bed I awoke the next day at mid-morning, still tired but 60 % better. I stayed awake for a few hours, showered, changed the bed sheets and went back to bed for several hours more. I awoke tired ate a lite dinner and went back to bed. I awoke at 8:00 on Christmas day feeling fine, just like my old self. If you need any more information just call. Oh my vaccine information is: PFIZER EJ1685 12/23/20 1st dose. Thank you, Medical Interpreter Center for Advanced Pediatrics Endocrine Department.	Hashimoto Thyroiditis, High blood pressure, High Cholesterol, Controlled depression.	Levothyroxine 88mcg, Lisinopril, Cholesterol meds, Prozac.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910096-1	Approximately one week after Pfizer Covid vaccine, experienced around 4 cm diameter area with redness, mild tenderness, and itchiness at injection site on left deltoid.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910110-1	One hour after administration, patient experienced a nose bleed. Approximately 2 hours after administration she noticed her heart rate fluttering which turned in to a strong throbbing feeling at the base of her sternum. This was regular rate, but very strong, intense feeling. This lasted until the next day when it decreased frequency and ended by afternoon. Also she experienced a mild headache the day after receiving the immunization. She states that she has a hx of seasonal allergies. Also states that she was very anxious about receiving the immunization prior to admin. She states that she was also a little dehydrated.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910119-1	I received the vaccine on 12/23. I noticed my back was really itchy that day but didn't think much about it. The next day I had a rash on my arms, back, and chest. My eyes were swollen on 12/25. Rash still has not resolved today, maybe even worse.	none	Lexapro singular Breo Iron multivitamin phentermine Norvasc prilosec
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910127-1	Sore arm with general swelling noted in deltoid and upper shoulder on post-vaccine day 0 and 1. Managed with acetaminophen and resolved by morning of post-vaccine day 2. Headache started in morning of post-vaccine day 2 and increased in intensity throughout day. Initially managed with acetaminophen. Difficult to manage as day progressed. In addition, dizziness and slight vertigo not dependent on position/posture manifested in moderate intensity in late afternoon. Rested in reclined position which did not ease symptoms of headache or dizziness. Was able to sleep and woke up in morning with no symptoms. Dizziness did manifest in mild intensity on post-vaccine day 3 off an o, not dependent on activity or position, but was manageable. No further symptoms since day 3.	NA	Pregabalin, Duloxetine
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910128-1	Took vaccine 12/21/2020 12/22/20 Slight sore throat, injection site barely sore (left arm) 12/23/20 AM:slight sore throat, discomfort, pain left axilla PM:sore throat gone, pain under left axilla with sore/swollen Lymph Node (golf ball size) 12/24/20 All day: Pain left arm and under left axilla with sore/swollen Lymph Node (golf ball size), swollen Lymph Node left subclavicular, overall feeling of unwell, headache, nausea, hurts to breath deep. No appetite. Fever 99.8 Feel worse than when I had Covid. 12/25/20 AM: Didn't sleep well, symptoms same as 12/24 with additional swollen and painful Lymph Nodes on left side of neck (pea size), no fever PM: Feeling some better, less pain, Lymph Nodes still swollen, no fever 12/26/20 Feeling better other than Lymph Nodes (still swollen and axilla still sore) 12/27/20 Continuing to feel better, still swollen Lymph nodes less sore	Epidural steroid injection Nov 5, 2020 Covid Positive September 16, 2020	Requip (Daily) Protonix (Daily) Zyrtec (Daily) Zanaflex (PRN) Ibuprofen (PRN) Tylenol (PRN)
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910131-1	I exp sore arm, fatigue, body ache and after taking Ibuprofen was gone. The fatigue is still lingering not entirely sure if this is due to vaccine.	No	No
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910137-1	About 11:50 I sat down for observation and between 12 and 12:05 I felt tachycardia. I could even hear my heart and felt my heart really racing. I could feel something on my fingertips as well. The nurse came to check on me and at 2:08 my heart rate was 109 and one minute after it was already 110. So they brought 2 RNS to observe me. I did not go to the ER. They came about 10 min later and stayed with me 20 mins. They kept taking my vitals and checking my BP and told me that my vitals were stable. I left and when I went to my car and checked my heart race and noticed that it was stable, around 83 and decided to go home. I left the hospital about 1PM. After I had the vaccine, the next day I felt body aches, I was not sure if it was my sinus issues or related to the vaccine. I also had joint pains, back pains. But sometimes I have it with my sinus but today I feel fine. My arm the soreness increased with each day but by Friday it got better today I don't feel it anymore.	No	Vitamin D and Women's vitamin

Symptoms started approx 30 min after he received the initial shot. Patient was on his way home when he noted some tingling in his tongue and strange sensation to the mouth. Pt denies chest pain/SOB, LOC, AMS, neurological deficits. No abdominal pain, nausea or emesis.	No past medical /surgical history	unknown
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910220-1	I felt tired couple hrs in the afternoon felt better after laying down.. I started to feel completely around 5 pm. I did not miss any work.	No	No
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910222-1	Pfizer-BioNTech COVID-19 Vaccine At approximately 4 pm on December 23 (day of vaccine) I experienced sudden onset of fatigue. I also had a low-grade temperature of 99.0 F with chills. By 5:30 pm, I was also bringing to experience lightheadedness and dizziness. That night at approximately 10 pm I had a temperature of 99.1. On December 24, I experienced lightheadedness and dizziness the entire day, from waking up to going to bed later that night. My eyes were glassy and I would feel an impulse of dizziness go distinctly from the right side of my head to the left, and then feel more dizzy after that. It was constant throughout the entire day and would occur while I was sitting, standing, or moving around. On December 25, I was tired but the dizziness had gone away.	None	40 mg Famotidine BID; Sertraline HCL 75 mg once a day; Junel Fe Birth Control once a day
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910224-1	BP- 110/62 HR- 78 Temp ? 97.7 Resp ? 22 Reports feeling tingling and shaky, no visible shakiness and no unsteady gait noted	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910227-1	I received the first dose of the Pfizer Covid vaccine on Tuesday, December 22 at 0730 in my left deltoid muscle. I felt fine that day - just some injection site soreness later that day that radiated to my left neck. On Wednesday, I experienced some fatigue, headache and moderate backache and neck ache which were all side effects that I expected. On Thursday, December 24 at approximately 1330, I experienced tingling of the tongue. It began at the tip of the tongue, but spread to the entire tongue over a five minute period. At the same time, my throat became scratchy/itchy. I realized that this was an allergic reaction and took 2 25mg Benadryl capsules. The symptoms resolved in about 20 to 25 minutes. I never experienced trouble breathing, speaking or swallowing. I also reviewed everything that I ate, drank, etc. in the last 24-48 hours and there was nothing new. About four hours later, I developed an intensely itchy rash. It began on my trunk, then spread to my bilateral upper extremities, then neck. My face and scalp also itched although they did not have a rash. My face was just red. There were no other symptoms. I took 2 more 25 mg Benadryl at this time. It took about 45 minutes or so for the symptoms to resolve this time. Since that time, I have experienced significant body aches and fatigue (more than initially), mild headache and nausea. Due to the holidays, I was unable to report this incident to employee health until this morning, Monday, December 28. I have received no further instructions. On Friday, December 25, I noticed that I developed multiple aphthous ulcers on my gums and hard palate. Since that day, I have experienced extreme fatigue, body aches and a mild persistent headache and nausea.	N/A	Nexium, levothyroxine, Effexor, Topamax, Zofran prn, Alimovig, Ubrelvy prn, Singulair
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910231-1	Vaccine was received on 12/17/2020. Patient states that he did not start experiencing symptoms until 12/25/2020. Patient states that he doesn't think his symptoms are related to the vaccine and that he may need to be tested for Covid. Patient states that his symptoms are sore and itchy throat, congestion and runny nose, no coughing, no fever, no chills, no body aches. Patient states that his kids go to daycare and came home with a runny nose, no travel history, no exposure to Covid that he is aware of, never tested positive for Covid. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910293-1	<p>joints were aching; nauseous; hot flushes that progressed; feeling really hot; can't recall names; had a glazed look; This is a spontaneous report from a contactable registered nurse A 34-year-old female patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number: 9899, expiry date: Mar2021), intramuscularly in left deltoid on 18Dec2020 at 10:20 am at 0.3 mL, single for COVID-19 immunization. Medical history included chronic lyme disease and anxiety both from an unknown date and unknown if ongoing. Concomitant drug included vivogen which is a stimulant to keep her awake during the day and took supplements, but reporter didn't have a full list. On 18Dec2020 at 10: 25, the patient had an adverse reaction within 5 minutes felt nauseous, hot flushes that progressed and feeling really hot, as it progress she started getting out of it, the patient also can't recall names, she had a glazed look, within 30 minutes (18Dec2020 10:50) joints were aching. She was asking for common adverse events during clinical trial study. The event was reported as seriousness for being other medically important condition. The reporter considered the events was related to the COVID 19 Vaccine. The patient still had the neuro symptoms. She was still very out of it and her joints were still hurting. The nausea had gone. The outcome of the nauseous was resolved in Dec2020, the outcome of joints were aching was not resolved, the outcome of other events was unknown.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, nauseous, hot flushes, feeling hot, can't recall names, glazed look and joints aching, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.</p>	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910296-1	<p>A very slight droop of relaxed right lip (Smile is symmetrical and NO orbital involvement); tightness, swelling and tingling in right jaw; tightness, swelling and tingling in right jaw; tightness, swelling and tingling in right jaw; generalized itching; A small patch (dime-size)of non-raised erythema noted behind right ear; A brief period of feeling hot followed immediately by a chills; Rash; This is a spontaneous report from a contactable nurse. A 41-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EJ1685), intramuscularly in the left arm, on 18Dec2020 at 08:45 (at the age of 41-years-old) at a single dose for COVID-19 immunization. Medical history included hypertension (HTN) and seasonal allergies. The patient was not pregnant at the time of vaccination. Concomitant medications, taken within 2 weeks of vaccination, included mometasone furoate (FLONASE) and cetirizine hydrochloride (ZYRTEC). Other concomitant medications included an unspecified antihypertensive. The patient had no known allergies to medications, food, or other products. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient experienced a very slight droop of relaxed right lip (smile is symmetrical and no orbital involvement); tightness, swelling and tingling in right jaw, generalized itching, a small patch (dime-size) of non-raised erythema noted behind right ear, a brief period of feeling hot followed immediately by a chills, and rash on 18Dec2020 at 09:30. Therapeutic measures were taken as a result of the events, which included treatment with oral diphenhydramine hydrochloride (BENADRYL) 50 mg. The clinical outcome of a very slight droop of relaxed right lip (smile is symmetrical and no orbital involvement), tightness, swelling and tingling in right jaw, a small patch (dime-size) of non-raised erythema noted behind right ear, and a brief period of feeling hot followed immediately by a chills was not recovered and of generalized itching and rash was recovered on an unspecified date. It was reported that jaw tightness and slight asymmetry of relaxed lips continued on 18Dec2020 at 16:15. It was also reported that since the vaccination, the patient had not been tested for COVID-19. No follow-up attempts needed. No further information expected.; Sender's Comments: Based on the close temporal relationship, there is a possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.</p>	No current illness for this event.	FLONASE [MOMETASONE FUROATE]; ZYRTEC [CETIRIZINE HYDROCHLORIDE]
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910309-1	<p>"fainted right after taking the vaccine; This is a spontaneous report from a non-contactable consumer (Pfizer company representative). A female patient of an unspecified age received the bnt162b2 (BNT162B2; also reported as COVID-19 vaccine; Batch/lot number, NDC number, Expiry Date: Unknown), via an unspecified route of administration on 17Dec2020 at a single dose for COVID-19 immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient experienced fainted right after taking the vaccine (medically significant) on 17Dec2020. It was unknown if the patient received other products, and any investigation assessment was unknown. The clinical course was reported as follows: The reporter stated they had seen quite a bit on social media and on the (site name), where people have been sending around a video regarding a healthcare worker who fainted. The caller was just wondering "" if Pfizer has been made aware of this. ""Apparently, this was on the news. This healthcare worker was taking the COVID-19 vaccine and as she was talking to the press, she apparently fainted. It looks as if she fainted as one would do when taking blood tests or faint from fear of a shot or being worried. However, this video has been sent all over social media, as seen as an AE, and telling people to not take the vaccine."" The reporter further clarified the healthcare worker was in (city name) and received the COVID-19 vaccine. As the healthcare worker was talking to the press, she fainted right after taking the vaccine. The reporter further clarified she was sent a link via (site name) from the news channel where it had the video recording. The reporter did not have a specific reporter. The reporter explained it was a "" whole group that was talking about it."" The reporter clarified she was in a (state name) group on (site name) with friends and family. The reporter also saw it on social media. "" People are sending it left and right."" When probed to determine if the reporter had any patient details or further details regarding the event, the caller stated the only information she had was that on (News name), and click on (City name) news and find the video of the healthcare worker taking the vaccine and fainting. The reporter clarified the news article was dated as 17Dec2020 ""so this event must have happened yesterday."" From the reporter's understanding from the news, the patient was fine, she got up. ""However, people are sending out on social media that she is dead"", which the reporter did not think was the outcome. According to the news, when the reporter opened the link, it was just a regular fainting, it was not a death. The reporter felt obligated to report and make sure Pfizer was aware of this since she had been seeing it everywhere on social media. The clinical outcome of the event, fainted right after taking the vaccine, was unknown. No follow-up attempts are possible; information about batch/lot number cannot be obtained."</p>	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910310-1	<p>"throat tightness; tingling of lips; allergic reaction; felt strange; This is a spontaneous report from a contactable Other-HCP (nurse practitioner). A 43-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, NDC, lot/batch number and expiration date unknown), via an unspecified route of administration on 18Dec2020 at single dose for covid-19 immunization (She wanted to be vaccinated against COVID 19). Patient history was no. She has no other history no other history of reactions to vaccines or flu vaccines, no history of allergies noted before. She thought her weight was probably about 140. She did not have her height either, but she was about 5'4"" probably. Concomitant medication included atorvastatin (LIPITOR) and thyroid medications. It was reported that they have an employee that received the COVID 19 vaccination and experienced an allergic reaction. It had to be a brief call but it was there crazy. Patient received the vaccine and within 30 minutes she had throat tightness and tingling of lips. This happened on 18Dec2020(today) about 20-30 minutes after receiving the vaccine. The throat tightness had resolved after giving Epinephrine (Epi). She said the tingling of her lips resolved as well after Epi. She just said she felt strange but that could be from the Epi. She said it was an employee vaccination so there was no prescriber. She took Lipitor and thyroid medications. She said those were just her routine medications. She did not have a start date for the Lipitor. She had not been on anything new. It was definitely just the COVID vaccine. Outcome of the events tingling of her lips, throat tightness and allergy reaction was recovered on 18Dec2020, of other event was unknown. Information about lot/batch number has been requested.; Sender's Comments: There is a reasonable possibility that the events allergic reaction and throat tightness were related to BNT162b2 based on known drug safety profile and close temporal relationship. Based on the close temporal relationship, the association between the event tingling of lips with BNT162b2 can not be completely excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate."</p>	No current illness for this event.	LIPITOR (ATORVASTATIN)
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910311-1	<p>Temperature up to 102.2; Numbness in fingertips; Chills; Nausea; Soreness in arm; Shaking too badly; This is a spontaneous report from a contactable Registered Nurse (patient) and Consumer (Patient's husband). A 64-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, batch/lot EK5730), via an unspecified route of administration in Left deltoid on 17Dec2020 14:00 at single dose for COVID-19 immunization. Vaccination Facility Type: Hospital. Vaccine administered at site: No. Medical history included cervical dystonia. The patient had COVID back in Mar2020. Symptoms were similar but she doesn't remember having the numbness in her fingertips. Family medical history: None. The patient's concomitant medications were not reported. Additional vaccines administered on same date of Pfizer suspect: None. The patient previously took povidone-iodine (BETADINE) and experienced allergy to betadine. Prior Vaccinations within 4 Weeks: None. AES follow prior vaccinations: None. The patient experienced temperature up to 102.2 on 18Dec2020 11:00, chills on 18Dec2020 10:00, numbness in fingertips on 18Dec2020 10:45, nausea on 18Dec2020, soreness in arm on 17Dec2020, shaking too badly in Dec2020. No AES require a visit. Relevant tests: None. The patient received shot at 2PM. Had a little soreness in arm and took paracetamol (TYLENOL, Acetaminophen 500mg, Product strength and count size dispensed: 500mg caplets; quantity 100, Provided OCE3259A above date of Jan2022, Provided 484782EF17 from bottle, NDC: 49035-308-78, Manufacturer is Unknown) as pain reliever before bed. Dose: 1000mg on 17Dec2020 at 9PM. Took Ibuprofen (Product strength and count size dispensed: 200mg tablets; quantity 100, Provided ODE2612A above date of Feb2022, Provided 604782EF8 from bottle, NDC: 49035-308-78, Manufacturer is Unknown) at dose: 400mg on 18Dec2020 at 4AM this morning. Having chills, temperature up to 102.2, numbness in fingertips and a little nausea. Clarified she is referring to the COVID Vaccine. The patient was shaking too badly. Symptoms started with Chills around 10AM 18Dec2020. Temperature was checked at 11AM Central time 18Dec2020 and checked now during report. Temperature was the same. Numbness in fingertips began 10:45AM 18Dec2020. Nausea had been on and on due to chills. Chills were aggravating the nausea. Had not thrown up. Temperature was going up and she was worried about getting dehydrated. Clarified EK5730 is from CDC Patient Card. Indication: Front line worker; lead nurse in Intensive Care and is in front of COVID all day long. A sample of the product is available to be returned, if requested, notified of mailer. Packaging is sealed and intact. The patient underwent lab tests and procedures which included temperature: 102.2 in Dec2020 and on 18Dec2020. The outcome of all the events was unknown. Serious: Yes, Seriousness criteria-Other medically important condition: No (as reported). Reporter seriousness for Temperature up to 102.2, Chills, Numbness in fingertips, Nausea: Medically significant. Relatedness of drug to reactions/events: Reaction assessed: Temperature up to 102.2, Chills, Numbness in fingertips, Nausea; Source of assessment: Primary Source Reporter; Source of assessment: Global Introspection; Drug result: Related. Verbatim event relatedness: COVID-19 Vaccine: Temperature up to 102.2, Numbness in fingertips-Related.; Sender's Comments: Based on the close temporal relationship and the description of the events, there is a reasonable possibility that the events, temperature up to 102.2, chills, numbness in fingertips, nausea, soreness in arm, shaking, are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.</p>	No current illness for this event. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910317-1	injection site pain; tiredness; headaches that come and go; muscle pain; few chill; severe joint pain; fever; This is a spontaneous report from a non-contactable healthcare professional (patient). A female patient of an unspecified age (Age: 60; Unit: Unknown) received single dose of (BNT162B2, batch/lot number and exp date not reported), via an unspecified route of administration on 21Dec2020 (last Monday), around 11amfor immunization. The patient's medical history and concomitant medications were not reported. Patient reported experiencing 7 side effects after receiving the COVID-19 vaccine on an unspecified date in Dec2020. She experienced injection site pain, tiredness, headaches that come and go, muscle pain, few chill, severe joint pain, and fever. Her temperature ranged between 99.9-100, at the low grade. Patient asked how long the symptoms would last and to what point does she assume that they relate to the vaccine. The outcome of the events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910318-1	Developed redness, swelling, and itching at injection site 6 days after receiving the vaccine.; Developed redness, swelling, and itching at injection site 6 days after receiving the vaccine.; Developed redness, swelling, and itching at injection site 6 days after receiving the vaccine.; This is a spontaneous report from a non-contactable nurse reporting for a patient. A 29-year-old female patient received first dose of BNT162B2 (Pfizer product, lot number EK5730), via an unspecified route of administration on 16Dec2020 on left arm at single dose for COVID-19 immunization. Medical history was none. The patient's concomitant medications were not reported. The patient was not pregnant. She had no known allergies, no Covid prior vaccination, no Covid tested post vaccination. The patient developed redness, swelling, and itching at injection site 6 days after receiving the vaccine (on 23Dec2020). No treatment was received for the adverse event. The outcome of the events was unknown. The report was assessed as non-serious. No follow-up attempts are possible. No further information is expected.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910319-1	"chills; extremely dry mouth where she feels like she has no saliva; extremely dry mouth where she feels like she has no saliva; extremely tired; had a strange sensation of tingling in her skull, back of neck, and up her skull. Tingling sensation is more left sided than right/the tingling sensation in her head; This is a spontaneous report received from a contactable nurse (who is also the patient). A 63-year-old female patient started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899, expiry date: Mar2021), via an unspecified route of administration, on 22Dec2020, at single dose, for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient reported that on 23Dec2020, she had a strange sensation of tingling in her skull, back of neck, and up her skull. Tingling sensation was more left sided than right. On24Dec2020, she experienced chills, which she knows is one of the normal effects. She also experienced an extremely dry mouth to where she feels like she has no normal saliva on 24Dec2020. She was constantly drinking ice water. She was also extremely tired. The patient reported that the most concerning to her is the tingling sensation in her head and the extreme dry mouth. The patient wanted to know if what she is experiencing is ok or not. She also reported that ""if it's urgent she cannot wait until USMI reopens, she will go to the ER"". The outcome of the events was unknown."	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910367-1	I got vaccine tonight ~1750. I felt fine immediately after and stayed for the recommended 15 minutes. During my drive home, ~20 minutes, I had some expiratory wheezing and a sensation of something in my throat. No angioedema or swelling. No skin symptoms. This was mild but made me think twice so I drove back to the er. The wheezing resolved, but I felt like I was going to faint with hot flushing and nausea in the parking lot. I didn't go in because things seemed better and my stomach was turning like I was going to have diarrhea. Since the wheezing was gone, I decided against going in. I stayed in the parking lot for ~ 15 minutes and feeling of unease and presyncope waxed and waned, but eased. I continued with some nausea. I had waves of nausea, chills, flushing, and presyncope. The wheezing didn't return. No tachycardia. I had chills and nausea on the drive home and at home. Took Tylenol and Pepcid when I got home and feel absolutely fine now after ~2 hours of fluctuating nausea, chills and sense of unease/anxiety. None were as severe as they were when I was in the parking lot. Throughout, I didn't have high or low heart rate. After 8 pm or so, I feel just fine. I have zero symptoms now.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910537-1	10 min after the vaccine had sudden cold hands; palpiti; dizziness; BP 150/90 - high for patient; a sensation of chest awareness (not pain, but a bit of tension); anxiety; a clear sensation of chest warmth; presyncopal episodes; chest tightness; Still with waves of chest warmth/heat/burning sensation and chest awareness; This is a spontaneous report from a contactable physician (patient). A 45-year-old female patient (not pregnant) received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 17Dec2020 15:00 at single dose at left arm for immunization. Medical history included hypothyroidism, migraine from an unknown date and unknown if ongoing. Concomitant medications included levothyroxine sodium (SYNTHROID), cetirizine hydrochloride (ZYRTEC), triamcinolone acetate (NASACORT). There's no other vaccine in four weeks. 10 min after the vaccine patient had sudden cold hands (the kind of inside cold like Propofol gives you), with palpiti and dizziness, self-limited in a few mins. BP 150/90 - high for patient. Similar episode but shorter and less intense within next half an hour. Also a sensation of chest awareness (not pain, but a bit of tension, which patient had experienced before with anxiety and put it on anxiety). Decided to go home and while walking patient noticed a clear sensation of chest warmth. Patient decided to stick around the hospital a bit more, pondering about going into the ER. Drank 2 bottles of orange juice and headed home. Then on the way home patient had 2 presyncopal episodes. The fact that patient had not eaten all day and wasn't well hydrated might have contributed. Patient didn't go to the ER. Patient ate, drank juice, took diphenhydramine hydrochloride (BENADRYL) 25 mg. The chest tightness got better. Still with waves of chest warmth/heat/burning sensation and chest awareness. Never had such sxs 2/2 anxiety. Patient received acetylsalicylic acid (ASPIRIN), diphenhydramine hydrochloride, clonazepam as treatment. Outcome of all events was recovering. Patient was not diagnosed with COVID-19 prior to vaccination, and no COVID tested post vaccination. Events were reported as non-serious. Information on Lot/Batch number has been requested.; Sender's Comments: Based on the close temporal relationship, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	SYNTHROID; ZYRTEC [CETIRIZINE HYDROCHLORIDE]; NASACORT

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910541-1	No adverse events reported as of yet after patient was vaccinated in right deltoid except a sore arm; pregnant patient was vaccinated yesterday with the COVID-19 vaccine; pregnant patient was vaccinated yesterday with the COVID-19 vaccine; pregnant patient was vaccinated yesterday with the COVID-19 vaccine; This is a spontaneous report from a contactable physician via Medical information team: A 35-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number: EH9899, in right deltoid via an unspecified route of administration on 17Dec2020 10:30 at single dose for routine vaccination. Medical history was reported as none. The patient's concomitant medications were not reported. It was reported that patient pregnant was vaccinated yesterday with the COVID-19 vaccine. She received vaccine while pregnant on 17Dec2020 which was non serious per report. The patient was an MD and her age was 35 years old. She was vaccinated yesterday with COVID 19 vaccine and she was pregnant. She was able to speak to Pfizer Drug Safety. The patient was a frontline Healthcare provider and there was no prescriber for the vaccine. She thinks there should be a pregnancy registry so she wanted to get on it so Pfizer can use her data. Her next dose will be on 07Jan2021. The reason she got it was because she was high risk and a front line healthcare worker. The patient was 21 weeks pregnant. She assumed this was going to be a normal pregnancy and normal delivery. The patient had the vaccination in the hospital. No additional vaccines administered on same date. No adverse events reported as of yet after patient was vaccinated in right deltoid except a sore arm. Onset time of arm being sore was 5pm (17:00) yesterday, 17Dec2020. This did not require a visit to the ER or physician's office. No prior vaccinations within 4 weeks. No AE for prior vaccinations and no medical history or family medical history relevant and no relevant test. The outcome of the events was unknown.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910543-1	"she got the vaccine 2 nights ago and started to develop itchiness all over her body 30 min post vaccination/head to toe itching; I had serious flu like symptoms, full body aches; Knuckles hurting on both hands; Rash; She stated she had"" body aches but feeling better today""; This is a spontaneous report from a contactable nurse (patient herself). A 61-year-old female patient received first dose of BNT162B2 (lot number: EK5730) via an unspecified route of administration, on 16Dec2020, at single dose, for COVID protection. Medical history included asthma. Concomitant medication included albuterol (SALBUTAMOL) for asthma. The patient mentioned that she got the vaccine 2 nights ago and started to develop itchiness all over her body 30 min post vaccination (16Dec2020). She stated she had body aches but feeling better today. Her body got very itchy and she spent that whole night head to toe itching. Itch was so bad. She had serious flu like symptoms, and full body aches. Patient stated that she understood everything was normal. Patient stated, ""I need to find out from you guys who do I call to find out if I have that itching, if I actually, I had an allergic reaction to the vaccine whether or not if I should take the second dose."" She also stated, ""I was going to say the first day about hour an half my it started with my knuckles hurting on both hands and then I just got rash, I mean not rash itching head to toe and it left with through the night I took some Zyrtec (further clarified as treatment) because I can't take Benadryl. So, I took and it (Zyrtec) helped with the it and itch was resolved by yesterday."" She had lab work two days ago. On the same day, she had the injection and had a test for her thyroid and COVID antigen test both with unknown results. The patient recovered from pain and pruritus on an unspecified date in Dec2020, while for the other events was unknown."	No current illness for this event.	ALBUTEROL [SALBUTAMOL]
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910545-1	"felt like I was going to pass out; lightheaded/Dizzy; 9 minutes after administration heart rate up to 154; leg shakes; started having chest itchiness; neck rash; facial hives; Injection site sore; This is a spontaneous report from a contactable consumer. A 29-year-old female patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot: EH9899) via an unspecified route of administration in the left arm on 17Dec2020 08:00 at a single dose for covid-19 immunisation. Medical history included allergies to cephalosporins. Concomitant medication include unspecified multivitamins. On 17Dec2020 08:09, the patient's heart rate went up to 154 after vaccine administration. On 17Dec2020 08:15, she felt like she was going to pass out, she was lightheaded and dizzy. The patient also experienced leg shakes, started having chest itchiness, neck rash, facial hives and injection site sore on 17Dec2020. The patient was treated with diphenhydramine (BENADRYL) 50mg intramuscularly (IM) for the events ""9 minutes after administration heart rate up to 154"", ""felt like I was going to pass out"", ""lightheaded/Dizzy"", ""leg shakes"", ""started having chest itchiness"", ""neck rash"" and ""facial hives"". The patient's heart rate came down to 130s then down to 90s and the hives subsided. The patient underwent lab tests and procedures which included heart rate: 154, heart rate: 130 and heart rate: 90; all on 17Dec2020. Outcome of the events ""9 minutes after administration heart rate up to 154"", ""felt like I was going to pass out"", ""lightheaded/Dizzy"" and ""facial hives"" recovered on an unspecified date while the outcome of events ""leg shakes"", ""started having chest itchiness"", ""neck rash"" and ""injection site sore"" was unknown."	No current illness for this event.	No other medications for this event.

The patient medical history was not reported. Concomitant medication included estradiol (ESTRACE), levothyroxine in Dec2020. The patient previously took amoxicillin and experienced drug allergy. The patient stated that ""on 17Dec2020 14:30, I got a mild headache. Within an hour it was severe. I became diaphoretic and felt flushed, and felt my heart pounding. Experienced GI upset and vomited once. Took Tylenol and went to sleep for 8 hours. Woke up feeling normal. Therapeutic measures were taken as a result of the events included Tylenol. The outcome of the events was recovered. The vaccine was administered at Hospital Facility. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not diagnosed with COVID-19 prior to vaccination. The patient had not been tested for COVID-19 since the vaccination."	No current illness for this event.	ESTRACE;
COVID19 (COVID-19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910552-1	"feels sluggish; had a little bit of fever yesterday; Warm feeling shooting in head; developed a warm feeling in his head that turned into a headache. This is a spontaneous report from a contactable consumer. A 57-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EM9899), via an unspecified route of administration (arm left) on 16Dec2020 at single dose for precaution for front line worker. The patient's medical history included blood pressure abnormal, blood cholesterol abnormal, diabetes, enlarged prostate, sleep disorder, on anticoagulant therapy, and migraine. Concomitant medications included lisinopril, simvastatin, metformin hcl, tamsulosin, dutasteride, zolpidem, aspirin [acetylsalicylic acid], and melatonin. It was reported that the patient experienced warm feeling shooting in head on 16Dec2020. It was further reported that the patient developed a warm feeling in his head that turned into a headache on 16Dec2020. The patient also experienced slight fever on 1Dec2020. The patient received the vaccine on Wednesday afternoon (16Dec2020). The patient stated, ""initially it felt weird; for a couple of minutes, it felt ok and then he felt a warm feeling shooting in his head, like when you take strong medications or do MRI. It gives you that strong feeling. It was cold or warm but shoots in head. He felt it, so he went to occupational health and it went away. He went home early and did not finish his shift. Then he got a headache and it did not go away and it is not severe. He feels sluggish and had a little bit of fever yesterday and took Tylenol and it went away. He still had a headache and it bothers him. He cannot remember the name of the medication that he got the warm feeling shooting in his head, but he believed it was when they did a dye for an MRI. He does not have the name and did not have a lot or expiration. He works at a hospital but not as a healthcare provider. He got the vaccine a few day ago and later stated it was Wednesday. 16Dec2020 warm feeling started an hour after getting the vaccine. As soon as he went to occupational health, it went away and improved. He did not have the headache yet. He did not work his full shift. He got home at night and felt not too bad of a headache. He has a history of migraines and he can feel somehow, he is starting to have a headache. It is not severe though. The headache started that night and it is still there. It is not so severe, but it bothers him. When he had a slight fever, it is gone after taking Tylenol. He never actually checked his temperature, he just felt warm. He takes medications every day, so he took medications the night before and did not take other medications since then. He wanted to find out if there was any interaction with the vaccine before taking them again. The outcome of event fever was recovering, events warm feeling shooting in head and headache was not recovered, and the event feels sluggish was unknown." COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910558-1	lightheadedness/feeling lightheaded/felt herself going backwards and caught herself; disappointed and upset; This is a spontaneous report from a contactable consumer (patient) who reported that a female patient of unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration, on 17Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. Patient was allergic to aspirin, if she takes it her eyes will come out of her head and quite a few other things will happen to her. Patient reported that she got the COVID-19 Vaccine on 17Dec2020 and it was like 1 hour after (also reported within 1 hour) she got the vaccine that she started feeling lightheaded which she had never experienced before, even today. Patient is an environmental service worker, she had so many discharges and so many COVID rooms to wipe down that she just kept pushing herself because they are just short staffed; but at one point she felt herself going backwards and caught herself, she decided to sit down and drink a water and continued to feel lightheaded. No one was available to relieve her yesterday (17Dec2020), she had to stay at the hospital until midnight and continue her activities with lightheadedness (pending clarification). Patient said, almost a day later, lightheadedness persists, she was still feeling the lightheadedness today (18Dec2020). Her concern is it's like 3-4 days afterwards that you will feel some effects. She wanted to know if this is what they are talking about, if this is expected. Patient initially reported being a healthcare professional (HCP), but clarified her profession is Environmental Service, working at (Institution name). Patient is allergic to aspirin, she wondered if the COVID-19 vaccine contains aspirin. Patient was suggested contacting her doctor to find out if she is allergic to any of the components in the vaccine. Patient was reminded it is possible to consult the ingredients as part of the Vaccine Fact Sheet on (Website name). Patient was disappointed and upset for experiencing lightheadedness after receiving the vaccine (Dec2020). She wishes she hadn't received it. As indicated in previous requests, was referred to an HCP for guidance after experiencing lightheadedness. Outcome of lightheadedness was not recovered, outcome of disappointed and upset was unknown. Information on the Lot/Batch number has been requested.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910578-1	ringing in the ear; unable to hear out of the right ear; This is a spontaneous report from a contactable nurse. A 53-year-old female patient (and nurse) started to receive bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number: EJ1685), intramuscularly in the left arm on 19Dec2020 at 08:00 at 53-year-old at a single dose for COVID-19 immunization. The vaccine was administered at a hospital. The patient was not pregnant at the time of vaccination. The patient did not receive any other vaccines within four weeks prior to the COVID-19 vaccine. Medical history included asthma, mitral valve prolapse, Sulfonamide allergy, and allergies to tree nuts; all from an unknown date and unknown if ongoing. Concomitant medications included atorvastatin (MANUFACTURER UNKNOWN), escitalopram oxalate (LEXAPRO), fluticasone propionate (FLOVENT); all taken for an unspecified indication from an unspecified date to an unspecified date (received within two weeks of vaccination). On 20Dec2020 at 14:00, the patient experienced: unable to hear out of the right ear (medically significant). On 21Dec2020 at 02:00, the patient experienced: ringing in the ear (non-serious). The clinical course was reported as follows: Approximately 30 hours post-vaccination, the patient was unable to hear out of her right ear. It progressively worsened; however, by 02:00, the patient's hearing returned, and the patient developed a ringing in her ear. By 14:00, all the symptoms had disappeared. There was no treatment received due to the events. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The clinical outcome of the event, unable to hear out of the right ear, was recovered on 21Dec2020 at 02:00. The clinical outcome of the event, ringing in the ear, was recovered on 21Dec2020 at 14:00.; Sender's Comments: A possible contribution role of bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE) to the onset of event deafness right ear cannot be excluded due to temporal relationship. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	; LEXAPRO; FLOVENT

If I do not feel better in the next 24 hours i will be contacting my HCP.	no	amlodipine
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910583-1	diaphoretic; dizzy; This is a spontaneous report from a contactable nurse. A 51-year-old female patient (not pregnant) received her 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/Lot Number: ek5730) at single dose on 21Dec2020 11:00 AM intramuscular on left arm for Covid-19 immunization. Medical history included known allergies with codeine. Patient reported similar reaction of diaphoretic and dizzy to giving blood. It was unknown if the patient received any other vaccines within 4 weeks prior to the COVID vaccine, or any other medications the patient received within 2 weeks of vaccination. It was unknown if the patient diagnosed with COVID-19 prior to vaccination. Concomitant drug was not provided. Patient became diaphoretic and dizzy approximately 11:15 AM on 21Dec2020 (also reported as 8 min after injection). The adverse event result in doctor or other healthcare professional office/clinic visit, and ED/Emergency room/department or urgent care. Treatment reported as patient was laid down with feet up, cool compress applied, drank some juice. The events were reported as non-serious. Since the vaccination, the patient had not been tested for COVID-19. Outcome of the events was unknown.; Sender's Comments: A causal association between BNT162B2 and the reported events diaphoresis and dizziness cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910585-1	Extremely painful legs; abdomen spasms; abdomen spasms and cramps; severe chills; This is a spontaneous report from a contactable nurse (patient). A 52-year-old female patient (not pregnant at the time of vaccination) received her 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) at single dose on 17Dec2020 04:00 PM Intramuscular in Right arm (also reported Arm Left) for Covid-19 immunization. Prior to vaccination, patient was not diagnosed with COVID-19. Medical history included hypothyroidism, hypotension, obesity, and allergies to onions. There were no other vaccines received in four weeks; however other medications received in two weeks. Patient experienced extremely painful legs and abdomen spasms and cramps, severe chills on 17Dec2020 09:00 PM. Patient applied amica 35% on the affected area and it helped. Since the vaccination, patient had not been tested for COVID-19. Outcome of the events was resolving. The events were reported as non-serious. Information on lot/batch number has been requested.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of events of extremely painful legs, abdomen spasms and cramps, and severe chills cannot be excluded. The case will be reassessed if additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910586-1	respiratory distress with dyspnea and increased work; respiratory distress with dyspnea and increased work; rapid progression of symptoms; lightheadedness; tingling to right upper and lower arm; pain to mid forearm; generalized weakness; This is a spontaneous report from a non-contactable health care professional. A 72-year-old female patient received her 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot_number= HE9899) at single dose on 18Dec2020 10:00 AM intramuscular in the right deltoid muscle for Covid-19 immunization. Medical history and concomitant drug were not provided. She denied any history of previous adverse reactions to vaccines. Concomitant drug was not provided. During her 15 minute waiting period after the injection, the patient began to experience lightheadedness and tingling to right upper and lower arm. Also complain of pain to mid forearm. She denied hives, difficulty breathing, difficulty swallowing, wheezing, throat tightness, itching and tongue swelling. When walking to the emergency bay reported some lightheadedness and generalized weakness, patient denies facial drooping or weakness. No loss of strength and normal ROM to hand and arms. This provider was notified of patient reaction and she was then assessed in the emergency bay area. Patient was monitored for severe reaction symptoms, including rapid progression of symptoms, respiratory distress with dyspnea and increased work. The events were reported as non-serious. Outcome of the events was unknown. No follow-up attempts are possible. No further information is expected; Sender's Comments: A possible causal association between administration of BNT162B2 and reported serious events cannot be excluded, considering the plausible temporal relationship. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910588-1	bells palsy; This is a spontaneous report from a Pfizer-sponsored program. A Consumer reported for herself. A 75-year-old female patient received bnt162b2 (BNT162B2) vaccine , via an unspecified route of administration on an unspecified date at single dose for covid-19 immunisation . The patient medical history and concomitant medications were not reported. The patient previously took mercury and experienced drug hypersensitivity. The patient experienced Bells palsy on an unspecified date with outcome of unknown. The patient is wondering if Bells palsy may be an adverse reaction to the vaccine. Information on the lot/batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910589-1	Low grade fever; fast heart rate; she sweated so much; she has body aches still; This is a spontaneous report from a contactable nurse (patient). This 25-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), (Batch/lot number: EH9899) via an unspecified route of administration on 20Dec2020 10:00 at single dose for COVID-19 immunization. There were no medical history and concomitant medications. Patient took COVID vaccine because she was exposure in hospital. Patient said she experienced reaction from the first dose of COVID vaccine. The patient got the first dose of vaccine by injection once on 20Dec2020, later clarified as COVID vaccine, and overnight she had a low grade fever on 20Dec2020, and she checked her heart rate from her Watch, and it said 108 to like low 100s, stated not her usual resting heart rate, and she woke at 4AM and felt a fast heartbeat, other than that, she thought it was from fever. Low grade fever was right before going to bed around 10PM: she had body aches, headache, she was not feeling well, she was very hot, At 4AM, she thought to sleep it off, as her whole body ached, and she couldn't really move, and she looked at her Watch to check and her heart rate was 103 resting, and she didn't take her temperature again, but she sweated so much, and she turned down the temperature and as of today, she has body aches still, and a little bit of fast heart rate. Outcome of the events was unknown. Reporter seriousness for Low grade fever and fast heart rate was medically significant. Primary Source Reporter assessed Low grade fever and fast heart rate related by Method.; Sender's Comments: A causal association between BNT162B2 and the events pyrexia and heart rate increased cannot be excluded based on temporal association. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910592-1	<p>"lost vision and had intense cold sweats for about 2 minutes; Vasovagal response; had intense cold sweats for about 2 minutes until blood flow returned to normal in upper body; This is a spontaneous report from a contactable healthcare professional, the patient. A 36-year-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EK5730), via an unspecified route of administration in the right arm on 16Dec2020 at 09:30 as a single dose for COVID-19 immunization. Medical history included polycystic ovaries syndrome with diabetes, depression, anxiety, attention deficit hyperactivity disorder, iron deficiency anaemia, and vasovagal issues. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient's received unspecified concomitant medications within 2 weeks of the vaccination. The patient did not receive any other vaccines within four weeks prior to the vaccination. On 16Dec2020 at 10:00 AM, the patient lost vision and had vasovagal response and intense cold sweats for about 2 minutes until blood flow returned to normal in upper body. The clinical course was as follows: The patient had a vasovagal response 30 minutes after the vaccine and had to lie down. She lost vision and had intense cold sweats for about 2 minutes until blood flow returned to normal in upper body. The entire episode lasted approximately 30 minutes. She felt it coming and knew to sit down so she would not "black out." She was unable to elevate her feet above her heart at the time; however, she was able to walk and stand afterward without dizziness. The patient did not receive any treatment. The clinical outcome of the vasovagal response, lost vision, and cold sweats were recovered on 16Dec2020. It was also reported that since the vaccination, the patient had not been tested for COVID-19.; Sender's Comments: The reported vasovagal response with cold sweats and transient visual loss was possibly related to the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE) due to temporal relationship. However, it is worth noting that the patient had medical history including vasovagal issues. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."</p>	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910593-1	<p>Arm soreness, 18 hours after vaccine with SOB, CP, fever 99. took Ibuprofen. Numbness to left side of face and hand approx. 36 hours post vaccine, that resolved in 10 hours approx. 48 hours after the vaccine. Lung pain resolved within 72 hours of the vaccine</p>	none	Synthroid, Baby Aspirin, propranolol, Atorvastatin, Zyrtec, CoQ10, Merena IUD
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910597-1	<p>Heart racing; Felt flushed and warm; The initial case was missing the following minimum criteria: no adverse event. Upon receipt of follow-up information on 22Dec2020, this case now contains all required information to be considered valid. This is a spontaneous report from two contactable nurses. A 46-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in right deltoid on 21Dec2020 18:30 at single dose for Covid-19 immunisation. Medical history included Graves disease, hypothyroidism and radiation from an unknown date and unknown if ongoing (all diagnosed about 12 years ago), dental infection (root canal that failed and said she had an infection) and teeth cleaning from an unknown date and unknown if ongoing. Concomitant medication included levothyroxine sodium (SYNTHROID) taking for many years for hypothyroidism, amoxicillin (500 mg tablet) from 21Dec2020 for dental infection. Prior vaccinations within 4 week was none. The patient experienced felt flushed and warm (non-serious) on 21Dec2020, heart racing (medical significant) on 22Dec2020. The patient received the COVID vaccine yesterday (21Dec2020). She called Pfizer Drug Safety yesterday and asked about if she could take amoxicillin with it for a dental infection. She got the vaccine last night (21Dec2020 18:30) and felt a little flushed and warm after receiving it, so they kept her for 15 minutes. Today (22Dec2020), her heart had been racing at 09:00. She was at rest and had not been exercising. Her heart felt like it will beat out of her chest. She had no history of anxiety. She was a little concerned since she got it at around 6pm yesterday and it has been about 18 hours ago. She would like to know if there have been any reports of any elevated heart rates issues occurring the day after. She called her doctor, but he did not have any information. She did start the amoxicillin yesterday before the vaccine. She got a teeth cleaning and had a previous root canal that failed and said she had an infection. She is not symptomatic. They said she needed another one root canal and crown. It is encapsulated and is not causing any issues, but it could down the line. Regarding the feeling warm and flushed, she said the room was warm and there were a lot of people in it, even though they were socially distanced. She said there was just some angst in the room. She did not have a history of getting anxiety. There was also no Air Conditioning on in the room. It subsided and she did not feel like it was alarming. At the facility, they were not documenting it. That went away within 15 minutes. Regarding the racing heart, she does not know how long it could go on. She did have thyroid issues. She had not done thyroid labs. It could be her thyroid meds too. She took her Synthroid first thing when she woke up so it could be that too. She did not have a lot or expiration to provide. No emergency room or physician's office required. The outcome of felt a little flushed and warm was recovered on 21Dec2020 at 18:45, heart racing was not recovered. Information about lot and batch was requested.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.</p>	No current illness for this event.	SYNTHROID;

No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910600-1	Reporting on behalf of patient. He self reported to the Medication Safety Coordinator, that he was woken up from his sleep the night after receiving the vaccination, with his jaw moving side to side uncontrollably. This lasted for a couple seconds, would stop, and then would happen again. This occurred about 3 times total. He also felt twitching in his forehead a couple times. These episodes self resolved and did not happen again.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910603-1	Extreme fatigue, muscle weakness	None	Multivitamin daily, calcium supplement, iron tablet, glucosamine chondroitin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910604-1	Developed vomiting, four to five times; Diarrhea; Abdominal pain; Slightly flushed face and minimum facial flow; Numb ears/Numb body; Bleeding; Anaphylaxis; This is a spontaneous report from a contactable consumer. A 43-year-old female patient received bnt162b2, via an unspecified route of administration on 19Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced anaphylaxis on 20Dec2020. Clinical course: the patient received the COVID vaccine on 19Dec2020, and since then she had developed onset of vomiting after 3 o' clock this morning on 20Dec2020, four to five times, numb ears, numb body. She also had diarrhea and bleeding. She had some abdominal pain and she also complained of having slightly flushed face and the minimum facial flow. The outcome of events was unknown. Information for Lot/Batch number has been requested; Sender's Comments: There is a reasonable possibility that the event anaphylaxis was related to BNT162b2 based on known drug safety profile. Based on the close temporal relationship, the association between the event bleeding with BNT162b2 can not be completely excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910606-1	Redness, swelling and mild itching at injection site.	None	Zyrtec, Advir, Albuterol
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910607-1	"sudden rapid slightly irregular heartbeat; My pulse rate was in 148 and remained in the 140's/rapid heartbeat; associated nausea; This is a spontaneous report from a contactable nurse. This nurse (patient) reported that the 45-year-old female patient received first dose of bnt162b2 (BNT162B2, Covid-19 Vaccine), on Arm left on 19Dec2020 09:30AM at single dose for covid-19 immunisation. She is not pregnant at the time of vaccination. Medical history was none. Known allergies was none. Allergies to medications, food, or other products was none. Concomitant medications were none. Facility type vaccine was other. No other vaccine in four weeks. Other medications in two weeks was none. The patient experienced "I had just received the vaccination was pulling into the area where you sit and wait in case you have an adverse reaction, was just looking at my phone and felt a sudden rapid slightly irregular heartbeat. Came on very suddenly with associated nausea I am a ER nurse with 22 years experience and so I began to take my pulse and record it with my phone. I wasn't sure if it was a reaction because I didn't feel like I "" couldn't breathe"" . Just a very rapid heartbeat. My pulse rate was in 148 and remained in the 140's. I beeped my horn on my car in case it was an adverse reaction. They placed a pulse ox on my finger and my heart rate then was 138 and O2 sats 98% . I sat for a bit and then it just went away. My heart rate was back down to the 70's."" The events started from 19Dec2020 09:30 AM and outcome of the events was recovered. No treatment was received. No covid prior vaccination. No covid tested post vaccination. Facility where the most recent COVID-19 vaccine was administered was Other. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. List of any other medications the patient received within 2 weeks of vaccination was none. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. Vaccine Facility information available. Location of injection information is available for all vaccines received on the same date. Information on the lot/batch number has been requested; Sender's Comments: A causal association between BNT162B2 and the reported events heart rate irregular, heart rate increased, and nausea cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate."	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910608-1	left eye is getting puffy after receiving COVID-19 Vaccine today; left eye is getting itchy after receiving COVID-19 Vaccine today; This is a spontaneous report from a contactable healthcare professional (patient). A 62-year-old female patient received BNT162B2 (COVID-19 mRNA Vaccine BNT162B2), via an unspecified route of administration on 21Dec2020 at a single dose for COVID-19 immunization. The patient's medical history included allergies to a lot of antibiotics. The patient's concomitant medication included Non-specified anti-inflammatory. The patient's left eye was getting puffy and left eye was getting itchy after receiving COVID-19 Vaccine on 21Dec2020. The events were reported as serious, medically significant. She said she is wondering if her left eye getting puffy and itchy is an allergic reaction and if she needs to seek treatment. Reported she did not have a prescription for the COVID-19 Vaccine. Reported her left eye being puffy and itchy has not gotten worse, but her left eye has not improved. Declined any treatment as she thought if she called Pfizer, Pfizer could tell her if she should get treatment. Reported she took an anti-inflammatory twice in the past 2 weeks, clarifying the last time she took the anti-inflammatory was over 4 days ago. The outcome of the events was not recovered. Information on the Batch/Lot number has been requested.; Sender's Comments: The reported information is limited. Based on the close temporal relationship, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910610-1	Blacked out; Vertigo; Diarrhea; Extreme Fatigue; sicker; This is a spontaneous report from a contactable nurse which is also the patient. A 48-year-old female patient received the first dose in the series of bnt162b2, lot number: EK5730, intramuscular in the left deltoid on 17Dec2020 at a single dose for COVID prevention. There were no medical history and concomitant medications. The patient received her COVID vaccine last Thursday evening, and she has been getting progressively sicker for the past couple of days on an unspecified date in Dec2020. On 20Dec2020, the patient experienced blacked out, vertigo, diarrhea, and extreme fatigue. The patient mentioned that she had extreme fatigue yesterday, with vertigo that started afternoon, and this morning her vertigo was so bad, that she blacked out in the shower, and the room is still spinning for her at this time. Outcome of the events blacked out and sicker was unknown, for the other events was not recovered. The seriousness of events blacked out, vertigo and diarrhea was reported as serious enough that she could not go to work, or get behind the wheel of a car so medically significant. Extreme fatigue was assessed as non-serious. The reported assessed the events extreme fatigue, vertigo, blacked out, and diarrhea as related to bnt162b2. The patient added that vertigo was worsened.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910613-1	hypertension; tired; Headache; This is a spontaneous report from contactable nurse, the patient. A 52-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EK5730), via an unspecified route of administration on 19Dec2020 as a single dose for COVID-19 immunization. Ongoing medical history included hypothyroidism. Other relevant medical history included anxiety and menopause. Ongoing concomitant medications included estradiol (MANUFACTURER UNKNOWN) taken for menopause, progesterone (MANUFACTURER UNKNOWN) taken for menopause, and venlafaxine hydrochloride (EFFEXOR) taken for anxiety. On 19Dec2020 at 18:00, the patient had a headache. On 20Dec2020, the patient experienced hypertension and was tired. The clinical course was as follows: the patient received her vaccine on 19Dec2020. At 18:00 on 19Dec2020, she started with a headache, and it was not a big deal. In the morning of 20Dec2020, her headache was bad, and then her blood pressure was 180/100. She had a headache and she was tired. She mentioned her baseline was 115/84. She had no coffee or anything, and as the day went by it was 140/90. She reported that the hypertension basically lasted for one day and in the morning of 21Dec2020 it was 120/88. As of 21Dec2020, she did not have a headache. The clinical outcomes of the hypertension and headache were recovered on unknown dates in Dec2020; while that of the tiredness was unknown. The patient assessed the hypertension and headache as serious for being medically significant and related to the vaccine; however, the seriousness and causality assessment were not provided for the tiredness.; Sender's Comments: A causal association between BNT162B2 and the events hypertension and headache cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.	Hypothyroidism (Verbatim: Hypothyroidism)	;; EFFEXOR

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910615-1	itching really bad; This is a spontaneous report from a contactable pharmacist. A 43-year-old female patient received the first dose of the bnt162b2 (BNT162B2; PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number: EH9899 and Expiration Date: Mar2021), intramuscularly on 17Dec2020 at 43-years-old at 0.3 mL, single for COVID-19 immunization. The vaccination was administered in a hospital. There was no history of previous immunizations with a Pfizer vaccine considered as suspect; and there were no additional vaccines administered on the same date of the Pfizer suspect; and there were no prior vaccinations (within 4 weeks). It was unknown if the patient had adverse events (AEs) following prior vaccinations. Medical history included obesity from an unknown date and unknown if ongoing, hay fever from an unknown date and unknown if ongoing. There was no family medical history relevant to the AEs. Concomitant medications included desvenlafaxine succinate (PRISTIQ) taken for an unspecified indication from an unspecified date to ongoing, metoprolol (MANUFACTURER UNKNOWN) taken for an unspecified indication from an unspecified date to ongoing, montelukast sodium (SINGULAIR) taken for hay fever from an unspecified date to an unspecified date, omeprazole (PROTONIX [OMEPRAZOLE]) taken for an unspecified indication from an unspecified date to ongoing. On 17Dec2020, the patient experienced: itching really bad; which was assessed as medically significant. There were no visits to an emergency room or a physician office as a result of the events. The clinical course was reported as follows: The patient started itching really bad within five minutes of receiving the vaccine. The patient was given a shot of diphenhydramine hydrochloride (BENADRYL) and the itching stopped. This was the patient's first dose of COVID vaccine. It was unknown to the reporter if the patient would continue the vaccine series. Therapeutic measures were taken as a result of itching really bad (pruritus). The clinical outcome of the event, itching really bad, was recovered on 17Dec2020. The causality assessment from the Primary Source Reporter was reported as related; via the Method of assessment.; Sender's Comments: A causal association between BNT162B2 and the event pruritus cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	PRISTIQ; ; SINGULAIR; PROTONIX [OMEPRAZOLE]
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910618-1	profound dizziness; This is a spontaneous report from a contactable nurse. A 54-year-old female patient received BNT162B2 (lot number: EK5730), intramuscular at the right arm on 17Dec2020 18:00 at 0.3 mL for COVID-19 immunization at a hospital. There were no medical history and concomitant medications. The patient experienced which she described as bizarre side effect of profound dizziness, almost like vertigo, states she was having to hold onto a wall, considered medically significant by the reporter on 20Dec2020 12:00. The patient recovered from the event on 21Dec2020, 10:00.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the event dizziness cannot be excluded. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910619-1	Experiencing some stool that had a little bit of blood and kind of mucus; Experiencing some stool that had a little bit of blood and kind of mucus; This is a spontaneous report from a contactable consumer. A patient of unspecified age and gender received first dose of BNT162B2 via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. This past Friday, so on the 18Dec2020 got the first shot of the COVID 19 Vaccine and starting yesterday (19Dec2020), the patient started experiencing some stool that had a little bit of blood and kind of mucus. So, patient just wanted to know if that is a side effect of the vaccine that could happen or if anyone else have also reported symptoms like that. Events outcome was unknown. Information about lot/hatch number has been requested.	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910620-1	freezing and could not get warm; shaking; sick; Chills; tired; lightheadedness; Redness at injection site; Believe the vaccine was given subcutaneous; This is a spontaneous report from a contactable nurse (patient). A 56-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: EH9899 and expiration date: Mar2021, via subcutaneous route in the back of right arm where the fatty area far away from deltoid, first dose on 17Dec2020 18:15 at a single dose for routine vaccination. The patient's relevant medical history was none. There were no concomitant medications. The reporting nurse was reporting for herself for the covid vaccine. She received the vaccine and believed it was administered subcutaneously versus in her deltoid muscle on 17Dec2020. She had redness at injection site on 18Dec2020. She also reported chills, lightheadedness and was tired on 18Dec2020. She added that the symptoms did not happen until after Friday night (18Dec2020). She doesn't think she could have continued working as sick as she was that night. She did not know if it was medically significant though. She went between not serious and medically significant and then stated she guessed it would be medically significant. She was freezing and could not get warm and was shaking. She did not notice the redness until Friday night around 3pm. The redness has improved, but it was still there. Unknown time for when it first started, but the first that she noticed it was around 3pm. Lightheadedness started around 1pm on 18Dec2020. The tiredness started around 3pm on 18Dec2020. The chill started around 7pm on 18Dec2020. They all improved by Saturday, 19Dec2020. Part of this report is that the doctor said it was in her triceps muscle and she does not think it was. They pinched the skin and put it in. She said her muscle was not sore. As a nurse, she believed it was not in her triceps area. It was not in the deltoid area and that was suggested from Pfizer. The reporting nurse's seriousness for 'believe the vaccine was given subcutaneous' was medically significant, while non-serious for 'Redness at injection site'. The patient had no ER nor physician visit required; she had no prior vaccines within 4 weeks. The patient does not have a positive test for SARS-CoV2. She does not have SARS-CoV2 antibodies at diagnosis as she has had blood test a couple of months ago, either end of Oct2020 or beginning of Nov2020, and there were No antibodies at that time. The patient was not hospitalized nor was she admitted to an Intensive Care Unit (ICU). The patient did not display clinical signs at rest indicative of severe systemic illness. She did not have supplemental oxygen (including high flow or ECMO) nor received mechanical ventilation. She did not receive any additional therapies for COVID-19. The events did not require the initiation of new medication nor other treatment or procedure. The outcome of the events chills, lightheadedness, tired and Redness at injection was recovering while unknown for believe the vaccine was given subcutaneous, freezing and could not get warm, shaking, and sick.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910631-1	Pfizer. Only upper lip swelled slightly (noted by coworkers as well) for about 24 hours. Of note, I had Juvaderm filler to the upper lip only late January 2020.	none	accupril, relenza, carbamazepine
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910632-1	elevated blood pressure/ elevation in blood pressure/ Highest BP 195/93 ranging 180s/90s/ Final BP 155/93; foggy headed/ less foggy; felt flushed/ feeling flushed; metallic taste in mouth; This is a spontaneous report from a contactable pharmacist. A 63-year-old female patient (not pregnant at the time of vaccination) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL0140), intramuscularly on 21Dec2020 15:30 at single dose on right arm for COVID-19 immunization. Medical history included Allergies to medications, food, or other products: IVP Dye, red ants. Concomitant medications received within 2 weeks of vaccination included celecoxib (CELEXA [CELECOXIB]) and atorvastatin calcium (STATIN [ATORVASTATIN CALCIUM]). The most recent COVID-19 vaccine was administered in Workplace clinic. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 21Dec2020 15:45, Initially patient felt flushed and foggy headed then developed metallic taste in mouth and elevated blood pressure, required extended monitoring period with continued elevation in blood pressure. Heart rate and respiratory rate stable, no respiratory distress noted. Highest BP 195/93 ranging 180s/90s, however denied need to be seen in ED. Final BP 155/93, less foggy, no dizziness or lightheadedness; feeling flushed remained. Total monitoring time: 83 mins, without significant distress. No treatment was received for the adverse events. The reporter reported the seriousness was no. It was unknown prior to vaccination. If the patient was diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The outcome of the events was recovered (pending clarification) in Dec2020.; Sender's Comments: A causal association between BNT162B2 and the event blood pressure increased and foggy feeling in head cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	CELEXA [CELECOXIB]; STATIN [ATORVASTATIN CALCIUM]

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910633-1	About 7 minutes into my observation period my heart rate rose to 170 bpm and I felt warm and shaky. It took around 15 minutes to return to 70-80; About 7 minutes into my observation period my heart rate rose to 170 bpm and I felt warm and shaky. It took around 15 minutes to return to 70-80; About 7 minutes into my observation period my heart rate rose to 170 bpm and I felt warm and shaky. It took around 15 minutes to return to 70-80; This is a spontaneous report from a contactable nurse (patient). A 36-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at first dose right arm on 21Dec2020 11:45 am at single dose for covid-19 immunization. The patient medical history and concomitant medications were not reported. The patient previously took Zithromax and morphine both cause nausea and vomiting. Patient was not diagnosed with COVID-19 prior to vaccination nor tested for COVID-19 since the vaccination. The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine nor received any other medications within 2 weeks of vaccination. About 7 minutes into patient's observation period, at 21Dec2020 11:45 am, her heart rate rose to 170 bpm and she felt warm and shaky. It took around 15 minutes to return to 70-80. Patient didn't receive treatment for the adverse events. The action taken in response to the events for BNT162B2 was not applicable. The outcome of events was recovered. The events were non-serious.; Sender's Comments: A causal association between BNT162B2 and the event heart rate increased cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910636-1	Nurse that fainted after the vaccine; This is a spontaneous report from a Pfizer sponsored program received from a non-contactable consumer. A patient of unspecified age and gender received BNT162B2 Pfizer-BioNTech COVID-19 Vaccine, via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. It was reported that the patient was a nurse who received the vaccine and did a live press conference on TV 15 minutes later and, as a result, she fainted. The event outcome was not reported. No follow-up attempts are possible; information about lot/batch number cannot be obtained.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910637-1	Tightness in chest; This is a spontaneous report from a contactable nurse (patient). A 61-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Batch/lot number EH9899), intramuscular on 15Dec2020 14:35 in left deltoid at single dose for covid-19 immunization. The patient medical history and concomitant medications were not reported. The patient states that she is on day 7 today, and yesterday, 21Dec2020, she woke up with tightness in her chest, like someone had wringed her rib cage. She states that she wakes up tightness in her chest again this morning 22Dec2020, patient states that as the day continues, it gets a little better. The action taken in response to the event for bnt162b2 was not applicable. The outcome of event was reported as not recovered. The event was reported as serious and seriousness criteria was other medically important condition.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of event Tightness in chest cannot be excluded. The case will be reassessed if additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910642-1	Shortness of breath; fast heart rate with just activity/increased heart rate; This is a spontaneous report from a contactable nurse. A 47-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685, expiration date: Mar2021), via an unspecified route of administration on 18Dec2020 10:00 at 0.3 mL, single (0.3mL constituted dose) on left deltoid for COVID-19 immunization. Medical history was none. The patient's concomitant medications were not reported. On 20Dec2020, the patient experienced fast heart rate with just activity, Shortness of breath. Reporter seriousness for Shortness of breath was Medically significant. This patient reported shortness of breath that resolved within hours and fast heart rate with just activity. Fast heart rate with just activity: In the morning around 08:00. It had resolved. Shortness of breath: In the morning as well. Resolved by the evening. Vaccination Facility Type was Hospital and Vaccine Administered not At Military Site. There was no additional vaccines administered on same date of Pfizer Suspect that caller was aware of. The adverse events didn't Require A Visit To. Relevant Tests: Did a COVID-19 test and it was negative. Per (website name), patient should not get a second dose. Wanted to know if this was true. Caller further reported that the patient receiving the COVID-19 vaccine experienced shortness of breath and an increased heart rate for a prolonged period, and was now stable. Caller saw recommendation from the (website name) indicating that the patient should not receive the second dose of the vaccine, and wanted to validate the information. The case safety report was considered as non-serious by the reporter in the further reported information. The outcome of the events was recovered on 20Dec2020.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of event Shortness of breath cannot be excluded. The case will be reassessed if additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910647-1	Autoimmune disorder, it just exacerbated when I got the shot; Autoimmune disorder, it just exacerbated when I got the shot; Joint pain; My immune system overreacted and it was like rash all over my body; This is a spontaneous report from a contactable Nurse for herself. A 32-year-old female patient received bnt162b2 (BNT162B2; Lot #EJH9899) vaccine, intramuscular on 18Dec2020 at single dose for covid-19 immunisation. The patient medical history included autoimmune disorder. The patient's concomitant medications were not reported. The patient stated that she suffered from unknown autoimmune disorder, and it just exacerbated when she got the shot, and she had like rash all over her body and had joint pain. The patient was treated with steroids.; Sender's Comments: A possible contribution role of BNT162B2 to the aggravated autoimmune disorder, joint pain and rash cannot be excluded. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	910720-1	After receiving the vaccine I was immediately nauseated. I went back to my desk to work and was dizzy and felt like I would vomit. This went away after an hour or so. My arm felt totally normal right after the vaccine, but later in the evening it worsened and I had a dead arm for about 24 hours. The next morning when I awoke I felt there was an elephant sitting on my chest. I couldn't catch my breath or take in a deep breath. I tried to walk down the stairs to get my inhaler, but was so dizzy I had to hang on to the railing in order not to fall. When I got to my medication cabinet I had difficulty opening the cupboard. I took my inhaler and the chest pain seemed to ease up as the day progressed. I had such terrible body aches that I tried to open a bottle of ibuprofen and had extreme difficulty with my fingers. Throughout the day my fingers were cramped up and I was unable to hold on to anything, even the steering wheel of my car to drive. My hands were so sore that I tried massaging them but nothing helped. I took ibuprofen and Tylenol every 4 hours to help and after about 48 hours the intense burning, aching, and cramping somewhat subsided. Over a week later, I am still struggling to use my cell phone and text messaging. My fingers are not working right so I am hoping that will go away. In addition, I have been achy with chills since the morning after getting the vaccine. I can not seem to warm up. I have tried warm baths and sleeping with hot pads, but I have terrible chills and aches. My joints and muscle hurt all over my body to the point that now I have made an appointment with a doctor to see if the vaccine caused some kind of autoimmune reaction. My fingers, hips, and knees are the areas that hurt the worst still. I am a marathon runner and was currently training and doing well. After the vaccine, my joints and muscles have been so painful that I haven't been able to maintain what I was currently doing with running. I have ended up icing or heating different parts of my body daily and gone through a lot of ibuprofen, naproxen, and Tylenol trying to find relief. My entire body is covered in icy Hot as that seems to help a little. I am unable to sit for more than a few minutes without pain.	Asthma	Progesterone, Testosterone, Metformin, iron, Spironolactone, B12, Vitamin C, Omega 3 Fatty Acid fish oils, birth control, multivitamin

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911030-1	He got the COVID vaccine on 12/23/20 at 11. Stayed at the facility for 30 minutes and then drove to another facility. Upon arrival at 12, he started feeling flushed. No SOB, no breathing difficulties. He started feeling itchy about 2 hours post vaccine. He took an Aleve. At home in the evening, took Benadryl with improvement of symptoms The following day also took Benadryl. On 12/25/20 & 12/26/20 he still had some itching, but not bothersome enough to take medications. On 12/27/20 he was working cutting tile and wearing protective eye wear, but the dust that landed on his face caused hives. He has been taking Benadryl since. He says this has occurred in past when his body is hypersensitive, the hives. He has seasonal allergies but no allergies to food or medications. Case discussed with Bolaris and recommendation is to take a Claritin or anti-allergy prior to next vaccine.	Denied.	Vitamins. Aleve, Motrin, Tylenol prn.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911125-1	Redness, heat, swelling that lasted for a week. Swelling went to around 3 inches circumference around the injection site. Now a lump under the skin and the start of a bruise forming.	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911144-1	Feeling of swelling of the upper lip and throat; Feeling of swelling of the upper lip and throat; Brief tongue tingling; her palms felt sweaty; her throat felt dry; This is a spontaneous report from a contactable consumer (patient). A 50-year-old female patient started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Solution for injection (lot number: EH9899 and expiry date unknown) via an unspecified route of administration at the left arm on 19Dec2020 08:45AM at a single dose (dose number: 1) for COVID-19 immunization. The patient's medical history included rare, mild exercise induced asthma with cold a few times in the past; history of pre-eclampsia; and known allergies: wheezing with iodine injected for a hysteroqram in 2014. The patient had no concomitant medications. The patient did not receive any other vaccines within 4 weeks prior to BNT162B2 and has not received other medications within 2 weeks of vaccination. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. It was reported that on 19Dec2020, 09:15 the patient experienced a feeling of swelling of the upper lip and throat. There was a brief tongue tingling about a half hour after the injection. Immediately after the injection, her palms felt sweaty and her throat felt dry. Therapeutic measures were taken in response to the events. The patient took Claritin about 9:15 and Benadryl 50 mg twice so far; the first was taken about 9:30AM. At 1:30 pm, the feeling of lip and throat swelling came back and she took 50 mg of Benadryl again. At the time of the last observation, the outcome of the events was not recovered. The events were reported as Non-serious.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911145-1	received COVID Vaccine on 16Dec2020 and was asymptomatic for active COVID carrier; received COVID Vaccine on 16Dec2020 and was asymptomatic for active COVID carrier; This is a spontaneous report from a non-contactable nurse. A 35-year-old female patient started to receive bnt162b2 (reported as product=COVID 19, brand=Pfizer; lot number and expiry date unknown); via an unspecified route of administration on 16Dec2020 at 09:30 AM at single dose for COVID-19 immunization. Patient's medical history and concomitant medications were not reported. The patient reported that she received COVID Vaccine on 16Dec2020 and was asymptomatic for active COVID carrier. Covid test type post vaccination was nasal swab on 16Dec2020 with positive results. It was reported that prior to vaccination, patient was not diagnosed with COVID-19. It was further reported that since the vaccination, the patient has been tested positive for COVID-19. The outcome of the events was unknown. Information on the batch number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with the suspect vaccine in this patient cannot be completely excluded.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911146-1	Fatigue; moderate headache; This is a spontaneous report from a contactable Nurse reporting for herself. A 34-years-old female patient received bnt162b2 (BNT162B2; Lot # EL0140)vaccine, intramuscular in the left arm on 18Dec2020 15:15 at single dose for covid-19 immunisation . Medical history included hypersensitivity to medications including amoxicillin sodium + clavulanate potassium] (AUGMENTIN) from an unknown date. The patient's concomitant medications were not reported. On 18Dec2020 22:00 the patient experienced fatigue and headache (6/10) refractory to caffeine or hydration. The nurse did not try tylenol or NSAIDs as wanted to prevent interference with immune response. The outcome of both the event was not recovered.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911147-1	lips began tingling; tongue was tingly/numb; tongue was tingly/numb; throat felt fuzzy like needed to clear it; This is a spontaneous report from a contactable nurse reporting for herself. This 36-year-old female patient (non-pregnant) received the first single dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot EH9899) on 19Dec2020 at 08:25, intramuscular, in left arm, for COVID-19 immunization. No other vaccine was given within 4 weeks prior to the COVID vaccine. Medical history included rheumatoid arthritis from 2014. The patient had known allergies to adalimumab (HUMIRA). The patient did not have COVID before vaccination. Family medical history relevant to AEs: none (sister allergic to cashews, dad allergic to bees).Concomitant medications included tofacitinib citrate (XELJANZ XR) from Feb2018, at 11 mg daily, for arthritis, ibuprofen (MOTRIN) at 600 mg, as needed (every day for years 600 mg PRN), vitamins NOS (MVI) daily, for years, omega-3 fatty acids. The patient received the vaccination on 19Dec2020 at 08:25 and waited at the facility 30 minutes. On 19Dec2020 at 09:10 the patient experienced lips began tingling, tongue was tingly/numb and throat felt fuzzy like needed to clear it. Symptoms persisted but did not worsen and at 09:37 she took diphenhydramine (BENADRYL) 25mg as treatment. At 10:30 symptoms were gone at 75%. Emergency room or physician office visit were not required. COVID was not tested after vaccination. Relevant tests: none. The events resolved on an unspecified date in Dec2020. The reporter considered there was a reasonable possibility that the event was related to suspect product.	No current illness for this event.	XELJANZ XR; MOTRIN [IBUPROFEN]; MVI [VITAMINS NOS];
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911148-1	Arm swelling; red circle size of a 50 cent piece; severe itching; This is a spontaneous report from a contactable consumer reporting for herself. A 44-year-old female patient received the 1st dose of bnt162b2 (BNT162B2) (Manufacturer Pfizer-BionTech, lot# EH9899), via an unspecified route of administration in arm left, on 16Dec2020 at 01:45 PM, at single dose, for COVID-19 immunisation. Medical history included rheumatoid arthritis, Hashimoto's thyroiditis, vitiligo and alopecia all from an unknown date and unknown if ongoing. The patient had no allergies to medications, food or other products. Concomitant medications included unspecified drugs in two weeks. The patient experienced arm swelling, red circle size of a 50 cent piece and severe itching all on 16Dec2020 at 03:00 PM with outcome of recovering. The events were considered non serious.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911149-1	right sided numbness; tingling to face,lips and arm to fingertips; slight headache within 15 minutes of vaccination; This is a spontaneous report from a contactable nurse. A 55-year-old female patient (not pregnant) received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection, Lot number: elo140), intramuscularly on 19Dec2020 13:15 at single dose for immunization. Vaccine location provided as Right arm. Medical history included asthma. Prior to vaccination, the patient was not diagnosed with COVID-19. The patient's concomitant medications were not reported. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced slight headache within 15 minutes of vaccination on 19Dec2020. On 19Dec2020 13:45, 35 minutes after vaccination reported right sided numbness, tingling to face, lips and arm to fingertips. No treatment was received for all the events. The outcome of the events was recovered in Dec2020. The events were assessed as non-serious.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911150-1	Fever; chills; body aches; headache; fatigue; This is a spontaneous report from a contactable Other Health Professional (patient). A 42-year-old non-pregnant female patient received first dose of BNT162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number=EH9899) intramuscular at arm Left on 18Dec2020 15:45 at single dose for covid-19 immunization. Medical history included seasonal allergies, eczema, and diagnosed with COVID-19 prior vaccination. Concomitant medication included fluoxetine hydrochloride (Generic Prozac), krill oil, bifidobacterium lactis (PROBIOTIC), sambucus nigra (ELDERBERRY) and multivitamin. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced fever, chills, body aches, headache, fatigue on 19Dec2020 12:00 PM, no treatment received for the events. COVID was not tested post vaccination. The outcome of the events was not recovered.	No current illness for this event.	; ; PROBIOTIC [BIFIDOBACTERIUM LACTIS]; ELDERBERRY [SAMBUCUS NIGRA]

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911153-1	About 30 minutes after injection I suddenly felt a rush of heat throughout my body; felt dizzy, weak and a bit nauseated; felt dizzy, weak and a bit nauseated; felt dizzy, weak and a bit nauseated; tired/ fatigue; have some minor injection site pain; This is a spontaneous report from a contactable nurse reporting for herself. A 42-years-old non-pregnant female patient the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE): lot number: EJ1675, intramuscular, in the left arm on 18Dec2020 at 13:15 (at the age of 42 years-old) as a single dose for COVID-19 immunization. The patient received the vaccine at a hospital. Medical history included an allergy to cilantro. Concomitant medication included colexcalferol (VITAMIN D), zinc (ZINC) intermittently, and paracetamol (TYLENOL) once, all within 2 weeks of vaccination. The patient previously took amitriptyline and experienced swelling of eyelid and palmar erythema. The patient did not receive any other vaccines within four weeks prior to the vaccination. On 18Dec2020, the patient experienced a rush of heat throughout her body, felt dizzy, weak and a bit nauseated and minor injection site pain. The clinical course as follows: At 13:45, about 30 minutes after injection she suddenly felt a rush of heat throughout her body, felt dizzy, weak, nauseated. This lasted about 30 minutes and then the warm feeling went away. She still felt a little dizzy, weak, nauseated and very tired. The dizziness lasted about 1.5 hours and the weakness, fatigue and mild nausea lasted about 6 hours. She reported that It felt as though she had taken diphenhydramine (BENADRYL). She stated that had she not been working (RN in an Emergency Department), she just would have taken a nap and it would have been ok. Having to work through it was not pleasant she said. She never had a fever during this but had some minor injection site pain. She reported that she never experienced an immune response to any vaccine (has had 6 in a day before and was fine). The patient was not hospitalized for the events. The patient was treated with 600 mg of naproxen sodium. The clinical outcome for the events of a rush of heat throughout her body, felt dizzy, weak and a bit nauseated and minor injection site pain, was recovered on an unspecified date in Dec2020. It was also reported that since the vaccination, the patient had not been tested for COVID-19.	No current illness for this event.	VITAMIN D ; TYLENOL
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911154-1	"ear Infection; This is a spontaneous report from a contactable other HCP (patient). A female patient of an unspecified age received bnt162b2 (reported PFIZER-BIONTECH COVID-19 VACCINE, Covid-19 Vaccine), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. PCT asked, "I got the Covid 19 vaccine yesterday, and this morning I woke up and went to the doctor because I had an ear infection. I was prescribed with oral antibiotics. Is it okay to take the antibiotics?"". Patient stated, "I had a question about it actually. I got the vaccine yesterday and then today I was at the doctor, I have an ear infection and I was wondering if that would be a bad thing if I took antibiotic while still recovering from the vaccine."" The outcome of the event was unknown. Information on the lot/batch number has been requested."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911155-1	Numbness on the right side of my face (jaw to just above right eye, not severe); This is a spontaneous report from a contactable consumer. A 44-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number EJ1685), via an unspecified route of administration at first dose right arm on 19Dec2020 07:15 AM at single dose for covid-19 immunization. None medical history. No known allergies. Patient was not diagnosed with COVID-19 prior to vaccination nor tested for COVID-19 since the vaccination. Concomitant medications included cetirizine hydrochloride (ZYRTEC), fluticasone propionate (FLONASE). The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced numbness on the right side of her face (jaw to just above right eye, not severe) on 19Dec2020 07:45 AM. Patient didn't receive treatment for the adverse event. The action taken in response to the events for BNT162B2 was not applicable. The outcome of event was recovering. The event was non-serious.	No current illness for this event.	ZYRTEC; FLONASE

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911170-1	"Caller states she cant focus/She just can't focus; this is horrible/I have a hard time focusing; I'm like you know fogged; I just want to sleep/I have been sleeping all weekend that was horrible; I have some headache; I just don't feel right this is terrible; This is a spontaneous report from a contactable consumer (Patient). A 58-year-old female patient started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685), intramuscular in the arm on 18Dec2020 at single dose for covid-19 immunization. Medical history included seizure. Concomitant medication included celecoxib (CELEXA), levothyroxine sodium (SYNTHROID), phenobarbitone [PHENOBARBITAL] for seizure. The patient stated that she could not focus, this was horrible and had a hard time focusing on 18Dec2020, the patient also stated that "like you know fogged" on 18Dec2020, the patient just wanted to sleep and she had been sleeping all weekend that was horrible on an unspecified date in Dec2020, the patient had some headache on an unspecified date Dec2020, she just took some Ibuprofen for the headache, the patient just didn't feel right this was terrible on an unspecified date in Dec2020. The outcome of 'could not focus' was not recovered and the outcome of the other events was unknown."	No current illness for this event.	CELEXA [CELECOXIB]; SYNTHROID; PHENOBARBITONE [PHENOBARBITAL]
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911171-1	"his entire body is hurting; It's flu like symptoms but not really; feeling run down; it's like skin sensitivity/if touch his skin it kind of hurts, more like skin sensitivity versus body ache, touch his arm it hurt; a bilateral inner thigh rash to knee, that was non irritating non itchy but was uniform in pattern; a sore throat but it was like a tickle a throat tickle and then a dry cough; a sore throat but it was like a tickle a throat tickle and then a dry cough; a sore throat but it was like a tickle a throat tickle and then a dry cough; sore arm at injection site; This is a spontaneous report from a contactable nurse (CRNA anesthesia, also the patient). A 39 years old male patient received a dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration at arm on 16Dec2020 at single dose for COVID-19 immunization. The patient's medical history included psoriasis (he took biologic for pre-existing psoriasis), arthritis and that ""he thought he had direct exposure"". Concomitant medications included unspecified biologic for pre-existing psoriasis. The patient initially called because he was asking that if it was reaction to the injection or if it was possible Covid 19 because he thought he had direct exposure. The patient mentioned ""his chest and stuff"" and got received a Covid test on 11Dec2020, 02Dec2020 and 24Nov2020 and they were consecutive test and he took these test because they were few of his coworkers down to Covid so he just wanted to be sure that he was not infected with them, these are all negative. So last result he had for Covid was 14Dec2020 and that's two days before he got the vaccine and they were all negative and ""it started like all his activities, it was like going to work, going to get food like at the grocery store or other places for takeout"". He had not been in a situation where he have been gathering with a lot of people or having dinner or lunch and sort of anything like that, just the point that he was not in the one of high risk people. For the possible ""side effects similar to covid 19 from vaccine"", the symptom presentation/progression per patient were as follows: the patient initially had sore arm at injection site on the day of injection which was Wednesday (16Dec2020) and then the following day (17Dec2020) he started having a sore throat but it was like a tickle a throat tickle and then a dry cough. On Friday (18Dec2020) he had a bilateral inner thigh rash to knee, that was non irritating non itchy but it was uniform in pattern. And then on Saturday (19Dec2020), he continued to have a dry cough and said he did apply some steroid cream that he has for his psoriasis and the rash is going away/almost gone and reported feeling run down, has skin sensitivity, he said that if touch his skin it kind of hurts, it's more like skin sensitivity versus body ache, when he touch his arm it hurt, it's like skin sensitivity. And then on Sunday (20Dec2020, the date of reporting), he still has cough and his entire body is hurting. It's flu like symptoms but not really. The patient's weight was around 175 pounds on an unspecified date. Therapeutic measures were taken as a result of the events included some steroid cream and over the counter Zicam (its tablet for cold). The outcome of the event dry cough was not recovered, bilateral inner thigh rash to knee was recovering, for the other events was unknown. When probed for the causality between events and the suspect product, the patient said ""hope it is not from that""."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911172-1	chills; low grade fever to 38.4; body aches; felt very tired; This is a spontaneous report from a contactable nurse (patient). A 57-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EK5730), intramuscularly on left arm at 18:15 on 18Dec2020 at single dose for COVID-19 immunization. Medical history included COVID-19 (Prior to vaccination, the patient was diagnosed with COVID-19). There were no concomitant medications (No other vaccine in four weeks, no other medications in two weeks). The patient had chills, low grade fever to 38.4, body aches and felt very tired at 15:00 on 19Dec2020. All events were reported as non-serious. The patient did not receive any treatment for all events. The outcome of events was recovering. COVID was not tested post vaccination.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911174-1	Mild injection site reaction- red, firm, swollen, tender; Mild injection site reaction- red, firm, swollen, tender; Mild injection site reaction- red, firm, swollen, tender; Mild injection site reaction- red, firm, swollen, tender. Most noticeable day 3 after injection. Note that I had COVID dx 21Apr; This is a spontaneous report from a contactable consumer reporting for herself. This 33-year-old female patient (non-pregnant) received the first single dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot E11685) on 17Dec2020 at 07:45, in left arm, for COVID-19 immunization. No other vaccine was given within 4 weeks prior to the COVID vaccine. Medical history included immune thrombocytopenia 2/2, COVID from 21Apr2020, chronic B12 deficiency, ADHD, depression, anxiety and migraine. Allergies to medications, food, or other products: none. Concomitant medications included sertraline HCl (ZOLOFT), lisdesamfetamine mesilate (VYVANSE), lorazepam (ATIVAN), ondansetron (ZOFTRAN) and sumatriptan succinate (IMITREX). On 17Dec2020 the patient experienced mild injection site reaction- red, firm, swollen, tender. It was most noticeable on day 3 after injection. No treatment was given. COVID was not tested after vaccination. The events were resolving.	No current illness for this event.	ZOLOFT; VYVANSE; ATIVAN; ZOFTRAN [ONDANSETRON]; IMITREX
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911175-1	"experienced severe insomnia/some serious felt of insomnia, he did not get a lot of sleep/ tossing and turning all night; This is a spontaneous report from a contactable consumer (patient). A 63-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection, lot number and expiration date not provided), via an unspecified route of administration on 17Dec2020 at single dose for COVID-19 immunization. Medical history included bipolar disorder. Concomitant medication included quetiapine fumarate (SEROQUEL) for bipolar disorder, levothyroxine. The patient received the first dose of the vaccine 17Dec2020 and then last night on 19Dec2020 he experienced severe insomnia. Specifically, it was reported that the patient worked at the front desk and on the Thursday of the 17Dec2020, he received the vaccine from the company and he was fine, he had no real side effects until last night on 19Dec2020 and he was not sure whether it's due to vaccine or not but he did experience some serious felt of insomnia, he did not get a lot of sleep. After about 10'clock in the morning when he was unable to achieve sleep, he took a ""cup"" ZzzQuil and that usually helps to go sleep but it did not work yesterday (19Dec2020) and the patient was tossing and turning all night. The patient wondering whether it is due to vaccine or not. The patient also tried 10 mg Melatonin and both of the medications didn't work. The patient didn't take them together. He took them separate. He took the Melatonin first and it did not work and then he took ZzzQuil by an hour later and the ZzzQuil did not work either. Neither of them worked. Therapeutic measures were taken as a result of insomnia. The outcome of the event was recovering. Information on the Lot/Batch number has been requested."	No current illness for this event.	SEROQUEL;
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911176-1	muscle aches, pain, and chills that were minor but not fever. He is now experiencing loss of muscle tone in his left foot and feels as if his foot is dropping.; it's hard to walk; muscle aches, pain, and chills that were minor but not fever. He is now experiencing loss of muscle tone in his left foot and feels as if his foot is dropping.; muscle aches, pain, and chills that were minor but not fever. He is now experiencing loss of muscle tone in his left foot and feels as if his foot is dropping.; muscle aches, pain, and chills that were minor but not fever. He is now experiencing loss of muscle tone in his left foot and feels as if his foot is dropping.; This is a spontaneous report from a contactable consumer (patient). A 62-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for covid-19 immunization, carbamazepine (TEGRETOL), via an unspecified route of administration from an unspecified date to an unspecified date at unknown dose and frequency for an unspecified indication. Medical history included ongoing diabetes; ongoing congestive heart problems; ongoing blood pressure high; ongoing mild kidney disease; ongoing gastroparesis; peripheral neuropathy, pain. Concomitant medication included hydrocodone bitartrate, paracetamol (NORCO) for pain, insulin glargine (LANTUS) for diabetes, insulin lispro (HUMALOG) for diabetes, carvedilol (COREG) for congestive heart problem, lisinopril for high blood pressure, spironolactone for high blood pressure, furosemide for high blood pressure, insulin for diabetes. The patient received the Covid-19 vaccine on 18Dec2020. After receiving the vaccine he had muscle aches, pain, and chills on 18Dec2020 that were minor but not fever. He was now experiencing loss of muscle tone in his left foot and feels as if his foot is dropping. The patient noticed on 20Dec2020 that his left foot it's not muscle tone it's kind of flopping there, it's hard to walk. The patient just took Tylenol and took his normal Narcan and Tylenol nothing in addition and one hot shower but it was more of nuisance. The patient stated that the main thing was that the loss of muscle tone in his left foot, that's what bothers him more than chills and everything like that because it was making difficult to walk and he want to walk around. The patient also stated that one of his health problems was peripheral neuropathy and that was what it just seem to make it why he can't feel his foot at all or he can do was move his big toe just a little bit and it was just kind of due to that. The patient just concerned whether that was supposed to go away in a couple of days. The outcome of the events was unknown. Information on the lot/batch number has been requested.	Blood pressure high; Diabetic; Gastroparesis; Heart disorder; Kidney disorder	NORCO; LANTUS; HUMALOG; COREG; TEGRETOL ; ;

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911182-1	"the rash on her back, more on the flank area/ the upper arms, she got this rash too; had fever, a low grade fever; 24 hour chills; chills was off and on; This is a spontaneous report from a contactable nurse (patient). A 48-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 17Dec2020 03:40 at single dose for COVID-19 immunization. Medical history (Other medications and other medical conditions) reported as no. The patient's concomitant medications were not reported. Caller initially called to "report some side effects after getting covid." Investigation Assessment was No. Consumer (Registered Nurse) further stated Just calling to report side effects because she guessed the data might be needed for study and everything. She went for the vaccine last Thursday (17Dec2020) around 3:40. The first night was the day that she had 24 hour chills (Dec2020). So, just round the clock, Tylenol was taken for that. Then she knew, the rash on her back, more on the flank area that was less than 24 hours that was Friday. And that's in her lower back and now she had more on that lower back and the upper arms, she got this rash too. Chills was off and on. The date when started experiencing rashes was 18Dec2020 and was still experiencing. The patient experienced chills and had fever, a low grade fever (Dec2020), and for chills she took Tylenol. For lab text, the patient stated "About 2 weeks no, after the COVID vaccine no". Due date for the next vaccine shot: Consumer believed the due date for the next vaccine shot was 07Jan2021. The outcome of the event "the rash on her back, more on the flank area/ the upper arms, she got this rash too" was not recovered, of the other events was unknown."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911184-1	vomiting; diarrhea; myalgia; headache; face swelling; pain at the injection site; This is a spontaneous report from a contactable physician reporting for one of her patients. A 43-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number: Unknown via an unspecified route of administration on 19Dec2020 at single dose for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. The patient received the COVID-19 vaccine yesterday (on 19Dec2020) and was experiencing vomiting, diarrhea, face swelling, myalgia, headache, and pain at the injection site on an unspecified date. Expressed being concerned about an anaphylactic reaction and wanted to know how her patient's symptoms compare to it. Then the physician asked for the timing of the anaphylactic symptoms onsets reported in the clinical trials. The event outcome was unknown. Information on the lot/batch number has been requested. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911201-1	anaphylactic reaction upon receipt of the vaccine; This is a spontaneous report from contactable pharmacist via a Pfizer Sales Representative. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration, in Dec2020 at a single dose for COVID-19 immunization. The patient was reported as a healthcare worker. Medical history included latex allergy. The patient's concomitant medications were not reported. The patient experienced an anaphylactic reaction upon receipt of the vaccine in Dec2020. The reporter called to confirm to confirm the lack of latex in the vaccine and also to inquire about the latex content of the 0.9% sodium chloride (NaCl) used to dilute the vaccine. The clinical outcome of anaphylactic reaction upon receipt of the vaccine was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and has been requested during follow up.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of anaphylactic reaction cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.

The patient's medical history and concomitant medications were not reported. On 17Dec2020 21:00, the patient was fatigued and had sore pain at the site of vaccine administration. On 18Dec2020, the patient experienced joint pain, muscle pain and chills. On 19Dec2020, the patient developed lymphadenopathy. The events were reported as non-serious. Outcome of events recovered on an unspecified date on Dec2020.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911235-1	My arm pit is swollen and a little painful; My arm pit is swollen and a little painful; This is a spontaneous report from a contactable consumer (patient). A male patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient noticed that his arm pit was swollen and a little painful on 20Dec2020. The outcome of the events was unknown. Information about the lot/batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911236-1	not being able to smell anything/Cannot smell anything; Sinus issues; Cough; Congestion; Feels hot; backache; fatigue; headache; This is a spontaneous report received from a contactable other health professional (who is also the patient). A 41-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via an unspecified route of administration in left arm, on 15Dec2020, at single dose, for COVID-19 immunization. There was no medical history. The patient's concomitant medications were not reported. The patient reported that she got the COVID vaccine last Tuesday, on 15Dec2020. She is a psychologist and works close with patients all the time. She has had symptoms since last Wednesday (16Dec2020). She clarified that her symptoms were back ache shortly after the vaccine, fatigue, headache, sinus issues and cough. Then her backache went away. She also had congestion and felt hot on 16Dec2020. She had an appointment last Friday (18Dec2020) and they took her temperature, but she did not have a fever. And then since yesterday (20Dec2020), she cannot smell anything. She has a baby and cannot smell the dirty diapers. She cannot smell her perfume. She asked other people who received the vaccine if they experienced this, and they did not. She was wondering if this is the vaccine or does she possibly have some other infection or should she get tested for COVID or is it possible this is from the vaccine? The patient clarified that at first her back ache went away but it is still ongoing now. It has persisted at the same level as well as all of the other symptoms. The outcome of the events was not recovered.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911246-1	headache; chills; fatigue; This is a spontaneous report from a non-contactable nurse. This nurse reported for a 32-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number=EK5730) Intramuscularly at Left arm at single dose for COVID-19 immunisation on 19Dec2020 (02:30 PM). Relevant history and concomitant drugs were unknown. The patient experienced had chills, fatigue, headache in the morning of 20Dec2020 at 7:00 am. The patient received Tylenol as treatment and the outcome of events was resolved in unknown date of Dec2020. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. No follow-up attempts are possible. No further information is expected.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911247-1	"amount of blood on his Band-Aid after the injection; This is a spontaneous report from a contactable pharmacist. A male patient unknown age received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) at single dose for COVID-19 immunisation on 20Dec2020. Relevant history and concomitant drugs were unknown. The patient had a significant (then rephrased to "small") amount of blood on his Band-Aid after the injection on 20Dec2020. Outcome of the event was unknown. The information on the lot/batch number has been requested."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911248-1	feeling kind of bad; low grade fever; chills; muscle aches; Arm is still sore at the injection site. It's sore to touch and can tell it's still sore with movement.; swollen lymph nodes; spontaneous report from a contactable nurse. This 47-year-old nurse reported for self that she received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) intramuscularly at right arm at single dose for COVID-19 immunisation on 18Dec2020. Relevant history included gestational diabetes history; Her daughter was 14 years old and she had never had diabetes. No signs of diabetes after birth of daughter. The patient was not a smoker/former smoker. The patient had tested positive with COVID antibodies probably in Apr2020, both she and her husband and both wound up getting symptomatic with COVID symptoms about the 14Mar2020. They were unable to get tested and just kind of figured they had it. Her husband also had pneumonia. They both recovered in Apr and decided to get the antibody test done and it was positive for the antibodies and they had also given blood since then and that was also positive for antibodies. The patient considered wondering with this being the first vaccine dose was considered as a good immune response. Relevant concomitant drug was unknown. The patient reported having the Pfizer-BioNTech COVID-19 Vaccine 685 on Fri and was having some symptoms. Got it about 12:45 Fri (18Dec2020) and around 11PM that evening she was feeling kind of bad, low grade fever, chills, and muscle aches. This was only the first vaccine she had. The symptoms ended up lasting up to 24 hours and the fever went away the next morning, but she still had chills. Only thing she had was the swollen lymph nodes at right axillary, the same side of the site of the injection. The patient mentioned she didn't feel very good Sat, but at the reporting time she could work today. The patient clarified that her husband did not have the Pfizer-BioNTech COVID19 Vaccine 685 vaccine. And she did not test positive for COVID and didn't have the actual testing done because they didn't have the test available it was only for if someone were hospitalized. The patient's arm was still sore at the injection site. It's sore to touch and could tell it's still sore with movement. There was no pre-existing diseases worsened during the SARS-CoV2 infection. The patient was not treated with immunomodulating or immunosuppressing medications or received any other vaccines around the time of COVID-19 vaccination. The patient did not have a positive test for SARS-CoV2. The patient did not display clinical signs at rest indicative of severe systemic illness. The patient did not taking any medications routinely prior to the event being reported. The outcome of event feeling kind of bad, low grade fever and muscle aches was resolved, the outcome of events swollen lymph nodes, chills and sore at the injection site was not resolved. The events were assessed as non-serious. The patient stated she had been positive with Covid in Mar, which may have caused her to be more symptomatic with the vaccine, but was unsure if that was the case. She also heard a lot of people had the first dose, never exposed to Covid, and had no symptoms after receiving the vaccine. The patient asked if she should still take the second dose even though she has been positive with Covid before. Information on the lot/batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911249-1	arm started to feel sore; injection site pain; This is a spontaneous report from a contactable consumer (patient). A 76-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number E9899, expiry date Mar2021) intramuscular on left arm on 17Dec2020 at single dose for COVID-19 immunization. The patient has no prior vaccinations within 4 weeks. Medical history included and concomitant medications were none. The patient got the COVID vaccine on Thursday (17Dec2020), her arm was still really sore (17Dec2020). The patient asked on how long will this last and was referred to healthcare professional. Full EUA PI, discussed incidence of injection site pain. No information on duration after 1st dose. The patient received the Covid vaccine around 10:30 on Thursday morning and her arm started to feel sore Thursday evening. The patient clarified that the vaccine was administered around 10:30AM to 11:00AM. The patient was advised to follow up with healthcare professional. The patient did not receive treatment for the events. The outcome of the events arm started to feel sore and injection site pain was recovering. The reporter informed that the vaccination facility type was a hospital and was not administered at a military facility.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911250-1	"Making me just kind of loopy too kind of light headed; Weakness; Ringing in ears; Headache; pain at the injection site; I could not even turn onto my other side last night from pain; pain at the injection site; I could not even turn onto my other side last night from pain; Chills; fatigue/Tiredness; low grade temperature; I couldn't even sleep; Extreme muscle and joint pain generalized; Extreme muscle and joint pain generalized; This is a spontaneous report from a contactable nurse. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number: EH9899, via an unspecified route of administration on 19Dec2020 at single dose for COVID-19 immunization. Medical history was reported as none. There were no concomitant medications. The patient stated, "'I am a Registered Nurse, an RN here in (city name) and I received your Pfizer vaccine (Covid 19 Vaccine) yesterday morning. I just wanted to report some issues with the vaccine. All through the night in Dec2020, I had the muscle pains, generalized muscle pain all over, even Tylenol (later clarified as Ibuprofen 200 mg, lot number: 9FE3019A and expiry date: Mar2021) wouldn't even work. I have a low grade temperature, headache, and real pain at the site of the injection, some chills earlier yesterday on 19Dec2020. So, I am afraid to get the next Pfizer one because to get some more side effects. This one is making me just kind of loopy too kind of light headed, and I am just really tired, really fatigue on 20Dec2020. With this Pfizer vaccine, I thought it was approved by the certain drug and (Center Name) and according to your message that I just got on another phone number has not been approved. But it was rushed out just for emergency use. Is that correct?'" When informed about the role of Pfizer Medical Information and offered the number, the patient stated, "'Well one number that I got, it was all loopy. I mean it was just all over the page, I couldn't leave a message. They gave me so much information that. So, which number you are talking about?'" The due date for the next shot: 06Jan2021. I am a healthcare provider and I also go into the COVID unit probably in January sometimes. So, I wanted, I am kind of one of your guinea pig. '"When I initially got it on 19Dec2020, of course I had pain at the injection site. I could not even turn onto my other side last night from pain at the injection site. Yesterday on 19Dec2020, I got some chills, I got a low grade temperature, feeling fatigue after a while. At first, I didn't feel that other than injections site. Through the whole night I had low grade temperature, extreme muscle and joint pain generalized, which I couldn't even sleep, I had insomnia. Tylenol wouldn't even help with that. Of course tiredness but I couldn't sleep. So I can't really feel okay, not a very good sleep yesterday. Low grade temp when I got up in the morning and dizziness and weakness this morning definitely and ringing in my ears kind of like. Yes I am generally, but the dizziness and the weakness is kind of new one. I had Tylenol during the night because I couldn't sleep, because I had such muscle and joint pain all over my joint in Dec2020.'" The outcome of the events was unknown."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911251-1	headache; had soreness/pain at the injection site between 24-48 hours; muscle aches; fatigue; malaise; low grade fever; This is a spontaneous report from a contactable consumer (patient). A 28-year-old non-pregnant female patient received first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine, lot number: 1703), via an unspecified route of administration at left arm on 18Dec2020 10:00 at a single dose for COVID-19 immunization, and second dose of hepatitis b vaccine, via an unspecified route of administration at left arm on 11Dec2020 at unknown dose for an unspecified indication. The patient received COVID-19 vaccine in a hospital facility. Medical history was not reported. The patient has no known allergies. The patient's concomitant medication included birth control. The patient previously received first dose of hepatitis b vaccine on unspecified date. Since the vaccination, the patient has not been tested for COVID-19. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was fine the morning she received the vaccine (up until the evening). Then she started to feel muscle aches, fatigue, malaise, and had a low grade fever on 18Dec2020 19:00. This persisted for about 48 hours. She also had soreness/pain at the injection site between 24-48 hours (started on 19Dec2020). The 3rd day (today, 21Dec2020), she had a slight headache, but that could be unrelated. The patient did not receive any treatment for the adverse events. The outcome of the events was recovering. The report was considered non-serious.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911252-1	fatigue; chills; arm soreness; This is a spontaneous report from a contactable pharmacist. This 34-year-old female pharmacist (patient) reported that she received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via intramuscular on left arm on 18Dec2020 at 12:45 PM at single dose for COVID-19 immunization. Facility where the most recent COVID-19 vaccine administered was hospital. Prior to vaccination, the patient was not diagnosed with COVID-19. Medical history and concomitant medications were not reported. It was reported patient had no other vaccine in four weeks; she had oral contraceptive in two weeks. Since the vaccination, the patient had not been tested for COVID-19. The patient experienced fatigue, chills, arm soreness on 18Dec2020 at 03:00 PM. No treatment was received. Outcome of events was recovered in Dec2020.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911253-1	arm pain; low grade fever of 100; This is a spontaneous report from a contactable nurse. A 46-years-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), intramuscularly at the left arm on 20Dec2020 10:30 at a single dose for COVID-19 immunization at a hospital. Medical history included migraine and asthma. Allergy with only certain nausea medications (unspecified). There were concomitant medications but were unspecified which the patient received within 2 weeks of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not diagnosed with COVID-19 prior to vaccination and was not tested for it since the vaccination. On 20Dec2020, 22:00, after almost 12 hours, patient had a low grade fever of 100 (unit unspecified) and had an arm pain with no treatment while fever responded to acetaminophen (TYLENOL). The patient recovered from the events on an unknown date.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911261-1	<p>incontinence (urine); Tiredness/ exhausted; woke early; numbness down her arm/ numbness went up to her neck/ numbness on the tip of her fingers; soreness on her neck; both her arms since she was so sore; both her arms since she was so sore/ sore at the injection site; sweats; extremely hot; headache; lightheadedness; This is a spontaneous report from a contactable consumer (patient). A 44-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685) intramuscular on left arm on 19Dec2020 18:00, single dose for COVID-19 immunization at 44-year-old. Medical history was not reported. Concomitant medications included: meloxicam (15mg tablet) oral 15mg once a day for arthritis. The patient had not taken any other medications today (21Dec2020) or yesterday (20Dec2020). The patient experienced numbness down her arm the first day she received the injection (19Dec2020), stated it was like someone was holding her hand tight, stated she thought this was normal. The numbness went up to her neck on 19Dec2020. By Sunday (20Dec2020) she had the numbness on the tip of her fingers in both hands. The patient stated she also had soreness on her neck on 19Dec2020. The patient stated that when she woke up it felt like someone pulled down on both her arms since she was so sore on 19Dec2020. Treatment received, the patient took paracetamol (TYLENOL), no visit to emergency room or physician office. Currently (21Dec2020), the patient was still sore at the injection site, but she did not have any pain or numbness. The patient had the sweats on 19Dec2020, stated she was extremely hot (19Dec2020). Her back was so wet. She was warm. The patient woke up incontinent (urine) this morning (21Dec2020). The patient stated it was not that she fully emptied her bladder, but she woke up wet this morning. The patient found it odd she did not wake to use bathroom, when she woke up she still went to empty her bladder. She felt like she had recovered completely from the incontinence, she only had it when she woke up. The first night after she took the vaccine (19Dec2020) the patient woke early, like 6 am which she didn't usually wake up so early. The patient stated for two nights she slept and did not move, she woke up the way she fell asleep laying down. It didn't look she changed position, woke up as if the patient did not sleep at all. The patient stated she must have been exhausted because she did not move at all. The patient started to experience the tiredness by the time she left work around 8 pm on 19Dec2020. The patient stated she was regularly tired, not overly tired but she worked two 12-hour shifts. The tiredness was better today (21Dec2020) than the first two days. The patient had a headache, lightheadedness (in Dec2020). Action taken for BNT162B2 was not applicable. Outcome of the event numbness down her arm/ numbness went up to her neck/ numbness on the tip of her fingers was resolved on 21Dec2020; outcome of the events soreness on her neck, both her arms since she was so sore, sore at the injection site was resolving; outcome of the event sweats was resolved on 19Dec2020; outcome of the event incontinent (urine) was resolved on 21Dec2020; outcome of the event tiredness was resolving; outcome of the other events was unknown.</p>	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911262-1	<p>severe dizziness; horrible nausea and vomiting; horrible nausea and vomiting; muscle soreness; headache; This is a spontaneous report from a contactable nurse (patient). A 40-year-old female nurse received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899) via unspecified route in left lower deltoid on 17Dec2020 10 am, single dose for COVID-19 immunization at 40-year-old. Medical history included: surgery and lipoma removed from upper deltoid in Nov2020. Family medical history included: Her mother had colorectal cancer at age 40. When the patient turned 40, she had colonoscopy earlier this year (2020) and it was negative. Concomitant medication included: levothyroxine 100ug daily from 2001. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. She had pretty severe muscle soreness Thursday night (17Dec2020) and the next two days. On 19Dec2020 it was not as severe. It was mild and it started to dissipate on 19Dec2020. The only thing she had been taking was acetaminophen 650mg that night for the muscle soreness. The patient awoke at 3:00 am on 20Dec2020 out of a dream with severe dizziness that turned into horrible nausea and vomiting. She had vomiting for a little while the third night (20Dec2020) into the fourth day. The patient (nurse) considered the muscle soreness and dizziness was non-serious and not medically significant. She didn't feel the need to go to the hospital because it did improve. After she threw up, the dizziness kind of went away. Even today (21Dec2020) she felt fine and no more nausea, but still felt kind of off and dizziness, lingering dizziness. It wasn't extreme dizziness but when texting she could feel, and it was hard to focus. She was not one hundred percent her normal self. She was not sure if it was related to the vaccine. She was eating and drinking normally. The night that she received the vaccine, she had one beer and one margarita at dinner. She did have alcoholic beverages, a beer and a margarita. It was nothing excessive with dinner. She was not overly drunk. She didn't know if alcohol could have contributed. She had never had that kind of reaction before from drinking. That was very odd. She just wouldn't drink any alcohol. She took acetaminophen for a headache (in Dec2020) that she was experiencing. She was pretty healthy. All of this was so new with the COVID vaccine. That night into this morning she started her menstrual period as well. She had never had any horrible side effects like migraines or cramping when getting her menstrual cycle. It could have been the alcohol or her period. No visit to emergency room or physician office. Action taken for BNT162B2 was not applicable. Outcome of the event muscle soreness was resolved on 19Dec2020; outcome of the event severe dizziness was resolving; outcome of the other events was unknown. Causality assessment between the event muscle soreness and the suspect product BNT162B2 per the patient was reported as related.</p>	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911273-1	Minor headache; chills; This is a spontaneous report from a contactable other healthcare professional (patient). A 31-year-old male patient received the first dose of bnt162b2 (BNT162B2, lot no. and expiration date were unknown), via an unspecified route of administration on 18Dec2020 23:45 on the left arm at single dose for COVID-19 immunization. Medical history included heart stent. The patient had no known drug allergies. The patient's concomitant medications were not reported. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. On 19Dec2020 01:00 AM, the patient experienced minor headache and chills. No treatment received for the events. The events recovered on unspecified date in Dec2020. Information on the lot/batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911274-1	"When they put the shot it's been hurting me ever since then; This is a spontaneous report from a contactable consumer. A 40-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), via an unspecified route of administration on an unspecified date as single dose for COVID-19 immunization. Medical history included diabetes and headache from an unknown date. Concomitant medication included metformin (MANUFACTURER UNKNOWN) for diabetes. On an unspecified date, the patient reported that "" when they put the shot it's been hurting me ever since then "" with outcome of unknown. Details were as follows: Patient indicated that when he got the shot, everything was good but when they put the shot it's been hurting ever since then. There were no lab tests, or treatment given for the event. The outcome of "" when they put the shot it's been hurting me ever since then "" was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911275-1	Heart palpitations and severe fatigue for 48 hours; Heart palpitations and severe fatigue for 48 hours; This is a spontaneous report from a contactable other healthcare professional (patient herself). A 37-year-old female patient received bnt162b2 (BNT162B2 also reported as COVID 19 brand Pfizer, lot EK5730), intramuscularly in the left arm on 18Dec2020 10:30 at single dose (dose number 1) for immunisation. Medical history was none. There were no concomitant medications. The patient experienced heart palpitations and severe fatigue for 48 hours on 18Dec2020 18:00. The events were reported as non-serious. No treatment was given. The outcome of events was recovered on unknown date in Dec2020.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911276-1	my arm hurt for 4 Hours later and peaked that evening; headache; tiredness; lethargic/pretty lethargic.; This is a spontaneous report from a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs). Contactable Physicians (one was patient) reported that a 72-years-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899, Expiry Date: Mar2021) on 18Dec2020 at single dose for covid-19 immunization. Medical history and concomitant drug were not reported. The caller is a MD. He had the vaccine on Friday. His arm hurt 4 hours later, and then peaked that evening. It was very painful. It hurt and was painful. By Sunday it was 95 % gone. Today (21Dec2020) the pain is completely gone. He received the vaccine Friday. He is supposed to get an MRI Wednesday morning. He will be getting Gadolinum. He wanted to know if there was any adverse reaction with that. Will this material interfere with the immune response of COVID vaccine? He is considering canceling his MRI. The caller confirmed the details provided by the transferring agent. He doesn't have a prescribing doctor. He was looking at his CDC vaccination record log. He was given 0.3cc. He received the injection, and the pain started 4 hours later. It peaked in the evening. It was the worst arm pain he has ever had from a shot. He couldn't elevate his arm from pain. It was interesting because there was very little heat at the injection site. The amount of arm pain was not proportionate to a local reaction. He did take Tylenol that night. He got up the next day, Saturday, and it was painful but a little less painful. Then on Sunday 20Dec2020, it was 95% essentially. He started to get lethargic that Friday at about 9-12 hours later. Then he had a headache about 11 hours later that lasted 5-10 minutes. He was surprised but it went away. Saturday, he was pretty lethargic. He felt more lethargic from the shingles shot. No details on the shingles shot provided by the caller. He said the tiredness may have been a placebo effect because everyone says you will get tired. He was fine yesterday and today, He is glad he got it. He has recovered completely from all side effects he had. He never had a fever. His question about the MRI was escalated by the Medical information associate. Follow-up attempts have been completed and no further information is expected.	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911277-1	left eye was irritated; left eye was sensitive to light; left eye was painful weeping and red; left eye was red; left eye weepy; entire left side was sore, achy, including her jaw and stuff; entire left side was sore, achy, including her jaw and stuff; This is a spontaneous report from a contactable consumer. A female patient of unspecified age (reported as 55 with no unit) received BNT162B2 (Pfizer-Biontech COVID-19 Vaccine), via an unspecified route of administration on right arm on 16Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. It was painless on 16Dec2020. On 17Dec2020, her entire left side was sore, achy, including her jaw and stuff, 18Dec2020 evening, her left eye was irritated, sensitive to light, painful weeping and red (left eye was painful, red, and weepy). She called her doctor on 19Dec2020 and he gave her some eye drops. On 20Dec2020, the eye drops seemed to irritate her eye more. She woke up in the morning and it was seeming to get better as she had been taking Excedrin. She was supposed to wait 6 hours between drops, then her eye again was sensitive to light and painful, so she took another Excedrin, which helped again. She was trying to see an eye specialist the day after the time of the report. She had asked around at work and nobody else had any issues. She was wondering if this was vaccine related. She wanted to get tested for COVID, not that she thought she had it now, but might be she had it before she got the vaccine. She had not even talked to her workplace about this or anything. They asked everyone the first day after, if there were any issues and to report them to HR/Employee Health. She had not done so yet, so she wanted to do that first. Outcome of the events left eye was irritated, sensitive to light, painful weeping and red, and left eye weepy was resolving, and of other events was unknown. Lot/batch number has been requested.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911290-1	I felt slight dizziness immediately after injection/dizziness increased; feel my heart beating quickly; achiness in my joints; soreness at the injection site; feeling strange; remain uncomfortable; This is a spontaneous report from a nurse (patient herself). A 57-year-old female patient (not pregnant) received bnt162b2 (BNT162B2 also reported as COVID 19 brand Pfizer, lot EH9899), via an unspecified route of administration in the left arm on 21Dec2020 14:45 at single dose, for immunisation. Medical history included rheumatoid arthritis, osteoarthritis, anaemia, bipolar disorder II, hypertension, and GERD. She had no Covid/ Covid test prior to vaccination. She had other medications in two weeks. The patient previously took hydrocodone and experienced drug allergy. The patient felt slight dizziness immediately after injection. When she walked to the 15 min. waiting area, the dizziness increased and she began to feel her heart beating quickly. She drank 8 oz. of water and told the attendant she was feeling strange. She took a pulse and oximetry reading - 110 and 95%. A nurse came over to check on her. The patient wanted to sit where the patient was for a few minutes longer. After about 20 mins. the dizziness immediately subsided and patient felt her pulse decreased. She got her things and left. After a few minutes, the patient began to feel achiness in her joints and felt soreness at the injection site. She had taken two Acetaminophen and remain uncomfortable. She planned to go home and rest. The events were reported as non-serious. No treatment was reported for dizziness and increased heart rate. The outcome of events Dizziness, Heart rate increased was recovered on 21Dec2020; for other events was unknown.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911294-1	"a funny metallic taste in her mouth; she felt like she had cotton mouth; This is a spontaneous report from a contactable consumer (patient). A 62-year-old female patient received the first dose of bnt162b2 (COVID 19 vaccine) lot no: EH9899, via an unspecified route of administration in left arm on 21Dec2020 08:00 at a single dose for COVID-19 immunization. Medical history included diabetic type 2 and allergic to metal, both from an unknown date and unknown if ongoing. Concomitant medication included ongoing metformin hydrochloride (METFORMIN ER) for diabetes, taking for a couple of years. The patient received the vaccine on 21Dec2020 8am at her hospital, and by 10:30AM or 11:00AM she noticed ""a funny metallic taste in her mouth."" She stated it was like a metal cup a tin taste like that and she wanted ice water. The patient is a phlebotomist, she continued with her patients and asked a co-worker did you taste/experience that, coworker stated ""I've had covid""; she didn't get the vaccine taste metal in your mouth. The reported wanted to know if that is an expected side effect of the vaccine. She can smell everything. She still has taste buds. It was still there but not as strong. She stated that she felt fine, and doesn't feel anything. She doesn't feel bad. She was just wondering about the side effects. She drank a lot of water. The patient added that all of the sudden her mouth was tasting funny like nickel. She added that she is allergic to metal; stated she can taste the tin in a tin can. She was working in the ER after having received the first dose injection at 8:00AM on 21Dec2020. She started to taste the funny taste about two hours later, 10:30AM or 11:00AM. She drank some ice water and it kind of rinsed her mouth out then she only tasted it a tiny bit. Then she felt like she had cotton mouth. It has improved but not gone away. She received the injection in her left arm. She is scheduled 11Jan2021 for the next dose. The patient was recovering from the events. The sample of the product is not available to be returned."	No current illness for this event.	METFORMIN ER
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911295-1	she started with ringing in her ears and it has not gone away; This is a spontaneous report from a contactable nurse (patient). A 57-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number and expiry date were not provided) solution for injection, intramuscular (left deltoid) on 19Dec2020 18:00 at a single dose for COVID-19 immunisation. Medical history was reported as none. There were no concomitant medications. The patient reported it was nothing severe, but she had the first dose of the vaccine on Saturday evening at 6pm and about 6 hours after, she started with ringing in her ears and it has not gone away. She would like to know if that was one of the side effects. It was not listed on the sheet that was given to her; will it go away and should. She was just concerned. She does not want it to progress. It was like a ringing. It was not like a headache but was a steady discomfort from ear to temple. She works at a hospital and got invited to take it. It was just an annoyance since it was still there. Outcome of the event was not recovered. Information on Lot/Batch has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911296-1	she started getting really bad body aches; she got really dizzy; nauseous; throw it up; her arm was sore where they gave the vaccination; The initial case was missing the following minimum criteria: no adverse effect. Upon receipt of follow-up information on (21Dec2020), this case now contains all required information to be considered valid. This is a spontaneous report from a contactable nurse (patient reporting for herself). A 21-year-old female patient received bnt162b2 (also reported as PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 19Dec2020 18:00 on the left arm at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient stated that she got the vaccine, the Covid-19 vaccine, Saturday 19Dec2020 around 6PM. On Sunday 20Dec2020, she went about her day and around mid day, about 5PM she started getting really bad body aches and then after she showered she got really dizzy, states she would try to eat and she would get nauseous and throw it up. She wanted to know how fast the symptoms are showing after vaccination. She went to get a COVID test today as well because she is not sure if this is due to the vaccine or what. She took Ibuprofen 400mg around 10PM last night 20Dec2020 because the body aches are so bad. States she took a shower last night and got really dizzy but that has resolved and has not happened since. On 21Dec2020, she ate some breakfast and at 11AM she got very nauseous and threw up. Initially (in Dec2020), her arm was sore where they gave the vaccination which she was expecting and then it started going all over her body, states it is like menstrual cramps but like all over. The events did not require a visit to Emergency Room and Physician Office. The event dizzy recovered on 20Dec2020. The outcome of her arm was sore where they gave the vaccination was unknown and the rest of the events was not recovered.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911297-1	aching/he is feeling a little achy/ he feels achy; he has not slept well; he is just tired; His arm did hurt for 2 days after; This is a spontaneous report received from a contactable consumer (patient). A 50-year-old male patient started received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730, expiry date: 31Mar2021), via an unspecified route of administration in left arm, on 16Dec2020, at single dose, for COVID-19 immunization. There were no medical history and concomitant medications. The patient reported he got the COVID Vaccine on 16Dec2020 (Wednesday) and now he is feeling a little achy. He is wondering if that is a side effect. He said it is not a big deal and that maybe he is just tired. He also reported he has not slept well so maybe he could just be tired. Although it could be a side effect. He clarified he did not start feeling achy until 21Dec2020 (today). He reported his arm did hurt after for 2 days. The outcome of the event vaccination site pain was recovered on an unspecified date in Dec2020, pain was not recovered, and the remaining events was unknown.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911298-1	Cough; congestion/stuffed nose; runny nose; chills; sore arm; decreased sense of smell; decreased sense of taste; This is a spontaneous report from a contactable physician. A 49-year-old female patient receive first dose of bnt162b2 (BNT162B2), intramuscular on left arm on 17Dec2020 10:15 SINGLE DOSE for COVID-19 immunization. Medical history included Cough variant of asthma, prediabetes. The patient's concomitant medications were not reported. On 18Dec2020 10:00, the patient experienced Cough, congestion, runny nose, chills, sore arm, stuffed nose, decreased sense of smell, decreased sense of taste. No COVID prior vaccination. The patient has been tested for COVID-19 post vaccination. The patient underwent lab tests and procedures which included nasal swab test: pending on 21Dec2020. The outcome of the events was recovering.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911299-1	broke out in hives on my chest and upper back.; This is a spontaneous report from a contactable other healthcare professional (patient). A 25-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot: EJ1685) intramuscularly on 18Dec2020 10:45 at a single dose for covid-19 immunisation. Medical history included moyamoya disease, asthma and allergies to crustaceans. Concomitant medication included acetylsalicylic acid (ASPIRIN (E.C.) and azithromycin. The patient previously took prochlorperazine maleate (COMPAZINE) and experienced drug allergy. On 18Dec2020 23:59, the patient reportedly broke out in hives on the chest and upper back. Outcome of the event recovered on an unspecified date on Dec2020.	No current illness for this event.	ASPIRIN (E.C.);
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911300-1	102.5 F fever; Chills; Headache; Dizziness; Body aches; Fatigue; Nausea; This is a spontaneous report from a contactable Other HCP (patient). This 24-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 19Dec2020 12:00 at single dose on left arm for COVID-19 immunization. Medical history was not reported. Concomitant medications included vortioxetine hydrobromide (TRINTELLIX) and levodopa, both received within 2 weeks of vaccination. Facility that the most recent COVID-19 vaccine was administered in Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient hasn't been tested for COVID-19. The patient experienced 102.5 F fever, chills, headache, dizziness, body aches, fatigue, nausea on 19Dec2020 23:00. The outcome of 102.5 F fever, chills, headache, dizziness, body aches, fatigue was recovering, of nausea was unknown. No treatment received for the adverse event. The events were assessed non-serious. Information about lot/batch number has been requested.	No current illness for this event.	TRINTELLIX
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911301-1	arm pain; Fever; body aches; fatigue; This is a spontaneous report from a contactable other HCP (patient). This 29-years-old female patient started to receive BNT162B2, on 17Dec2020 09:15 at single dose for COVID-19 immunisation. The patient medical history and the concomitant medications were not reported. Multi vitamins received in in two weeks. Prior to vaccination, the patient was not diagnosed with COVID-19. Facility that the most recent COVID-19 vaccine was administered in Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced Fever, body aches, fatigue, arm pain on 18Dec2020. The outcome was not recovered. The patient underwent lab tests and procedures which included sars-cov-2 test (Nasal Swab): negative on 11Dec2020. The events were assessed non-serious. No treatment received for the adverse event. Information on the Lot/Batch number has been requested.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911302-1	Flushing and Dizziness within 10 minutes of administration that resolved after drinking water.; Flushing and Dizziness within 10 minutes of administration that resolved after drinking water.; Injection site tenderness; Tiredness; headaches/headaches were markedly increased; muscle aches; fever to 101.1; Slight chest discomfort; chest pain/chest pain and headaches were markedly increased; This is a spontaneous report from a contactable nurse. This nurse reported for a 35-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), (Lot number: EK5730) via intramuscular route on 20Dec2020 10:30 at single dose on the right arm for COVID-19 immunization. Medical history included COVID in Apr2020, post COVID syndrome and migraines. No allergies to medications, food, or other products. Concomitant medications included topiramate (TOPAMAX), topiramate (TROKENDI), gabapentin, magnesium, vitamin b complex (VITAMIN B), all received within 2 weeks of vaccination. Facility that the most recent COVID-19 vaccine was administered in Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was diagnosed with COVID-19. Since the vaccination, the patient hasn't been tested for COVID-19. On 20Dec2020 10:30, the patient experienced flushing and dizziness within 10 minutes of administration that resolved after drinking water. Injection site tenderness. Tiredness, headaches, muscle aches, fever to 101.1. Slight chest discomfort (patient had COVID in April 2020. She had all these symptoms with in the acute phase and still have intermittent chest pain/headaches. With the vaccine, the chest pain and headaches were markedly increased on the day after receiving it). Outcome of the events was recovered in Dec2020. No treatment received for the adverse events. The events were assessed non-serious.	No current illness for this event.	TOPAMAX; TROKENDI; ; VITAMIN B
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911303-1	sore at site of injection; had a knot there where it was given; This is a spontaneous report from a contactable consumer (patient). This 67-years-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), on unknown date in Dec2020 at single dose for COVID-19 immunisation. The patient medical history and the concomitant medications were not reported. The patient received vaccine last Wednesday, didn't have any side effects. It was sore at site of injection. Same day, it had a knot there where it was given. The outcome was unknown. Information on the lot/ batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911304-1	sore throat; runny nose; This is a spontaneous report from a contactable consumer (patient). A 20-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EL0140) via an unspecified route of administration on left arm on 18Dec2020 at single dose for COVID-19 vaccination. There was no medical history. There were no concomitant medications. The patient is asking if this is part of the documented side effects of the vaccine. She received the Covid19 vaccine last Friday (18Dec2020), at noon, the first in the series of two. She says on Saturday (19Dec2020) she woke up with a runny nose, and then on Sunday night (20Dec2020) she had a sore throat. She says she would like to know if her body fighting is fighting something off or building antibodies. She received the vaccine from work and it was optional, not prescribed. She has her vaccine card and all it has on the back is the name Pfizer and the LOT. She didn't take any new medications or receive any other injections at the time of the COVID-19 vaccine. She didn't do any treatments for the sore throat and runny nose. Events outcome was unknown.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911305-1	nodule formed at the injection site; the injection along with localized pain; reddened, warm area remained around the injection site; reddened, warm area remained around the injection site; This is a spontaneous report from a contactable nurse (patient). A 42-years-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EH9899) intramuscular on right arm on 18Dec2020 17:30 at single dose for COVID-19 immunization. Medical history included hypertension. Concomitant medication included the medications the patient received within 2 weeks of vaccination: Amlodipine, hydrochlorothiazide, bupropion hydrochloride (WELLBUTRIN), zolpidem tartrate (AMBIEN). The patient previously took albuterol sulfate and experienced drug hypersensitivity. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 19Dec2020, a nodule formed at the injection site about 12 hours after the injection along with localized pain. The nodule started to disappear, but a reddened, warm area remained around the injection site. The reddened area is about the diameter of an egg. It has been about 72 hours since the injection. No treatment was received for the adverse event. Events outcome was not recovered.	No current illness for this event.	; ; WELLBUTRIN; AMBIEN
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911306-1	test positive post vaccination; test positive post vaccination; This is a spontaneous report from a contactable Nurse (patient). A male patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 17Dec2020 at single dose for COVID-19 immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient got the Pfizer Covid-19 vaccine on the 17Dec2020. He would like to how likely is he to test positive post vaccination. He wants to know if the test results would be a false positive post vaccination. He is going to get tested at two different facility. Event outcome was unknown.; Sender's Comments: Based on the current available information and the consistency with the known safety profile of the suspect product BNT162B2, a possible contributory role of the suspect product to the development of Drug ineffective and COVID-19 cannot be excluded. The case will be reassessed if additional information becomes available.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911307-1	sweating; itching palms; elevated HR; headache that lasted 24 hrs; fatigue; foggy feeling that also lasted 24 hrs; This is a spontaneous report from a contactable nurse (patient). A 39-year-old female patient received the first dose of BNT162B2 (lot number: EJ1685) intramuscular on right arm on 19Dec2020 14:45 at single dose for COVID-19 immunization. Medical history included DM type 2, irritable bowel syndrome, restless legs syndrome, insomnia. Other unspecified concomitant medications received in two weeks. The patient previously took thiomersal and experienced drug hypersensitivity. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 19Dec2020, within 10 minutes of the reaction she experienced sweating and itching palms with elevated HR. Within 1 hr of the vaccine she had a headache that lasted 24 hrs with fatigue and a foggy feeling that also lasted 24 hrs. No treatment received for events. Events outcome was recovered. No follow-up attempts are possible. No further information is expected.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911309-1	felt hot; felt achy; Chills; generalized myalgias; high fever/her highest recorded temperature was 102.5; Deltoid soreness; This is a spontaneous report from a contactable Other HCP. This other hcp (patient) reported for herself that the 32-year-old female patient received bnt162b2 (BNT162B2, Solution for injection, Covid-19 Vaccine manufacturer: Pfizer BioNTech), intramuscular into her left deltoid on 17Dec2020 07:30 at single dose for covid-19 immunisation (Prophylaxis). Medical history included Hypothyroidism, mood and sleep. Concomitant medications included Levothyroxine at 100mcg daily by mouth ongoing for Hypothyroidism started taking at 19 years old, escitalopram oxalate (LEXAPRO) at 10mg once a day by mouth from Dec2020 started it about 2 weeks ago ongoing for mood, zolpidem tartrate (AMBIEN) at 10mg as needed by mouth for sleep and was not taking this at the time. The patient experienced Deltoid soreness from 17Dec2020 to 18Dec2020, Chills from 20Dec2020 to 21Dec2020, generalized myalgias from 20Dec2020 to 21Dec2020, high fever from 20Dec2020 to 21Dec2020. The outcome of the events was recovered. Her vaccination cared is at her house. She received the product at the hospital she works at. The causality of the events Deltoid soreness, Chills, generalized myalgias and high fever was related. Caller is a nurse practitioner that reported that she wanted to report a possible side effect for herself with the Covid-19 vaccine. She said that she herself got vaccinated on Thursday 17Dec2020. She was doing fine except for the deltoid soreness that showed up about 12 hours after receiving the vaccine and lasted for about 12 hours and then it went away. On Sunday, she had sudden onset of chills, generalized myalgias, and a high fever. Caller said that her highest recorded temperature was 102.5. Her symptoms started at about 1430 and she said she had no other symptoms aside from what she reported. She said that her chills went away after about 3 hours and then she felt hot, and then she just felt achy and had the generalized myalgias. All were subsided by 0900 this morning. She said that she also had a low grade fever of 99.8 this morning, but it was all gone by 0900. Caller said that she is a emergency room employee and was given the vaccine at the hospital and they was no prescribing physician. Caller said that she has never had a reaction like this to a vaccine before. Vaccination Facility Type was hospital. Vaccine Administered at Military Facility was No. Additional Vaccines Administered on Same Date of the Pfizer Suspect was none. No AE(s) was require a visit to ER or physician office. Prior Vaccinations (within 4 weeks) was none. AE(s) following prior vaccinations was none. Family Medical History Relevant to AE(s) was none. Relevant Tests was None. Information on the lot/ batch number has been requested.	No current illness for this event.	; LEXAPRO; AMBIEN

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911312-1	R sided facial numbness; tingling; muscle weakness; This is a spontaneous report from a contactable pharmacist reporting for herself. This 32-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via intramuscular route at right arm on 21Dec2020 at single dose (lot number: EJ1685) for COVID-19 immunization. Medical history and concomitant medications were unknown. The patient reported R sided facial numbness, tingling, and muscle weakness roughly 20 minutes after receiving the COVID-19 vaccine on 21Dec2020. The sensation was improving over the next 10-15 minutes. The patient was asked to monitor her signs and symptoms and report to her doctor if no improvement/worsening. Events were reported as non-serious. No treatment was received for events. Outcome of the events was recovering. Information about lot/batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911313-1	Having a lot of bone pain in the arm that I got the injection at; Having a lot of bone pain in the arm that I got the injection at; This is a spontaneous report from a contactable consumer (patient). This patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose in the arm for COVID-19 immunization. Medical history and concomitant medications were not reported. Patient stated it was the COVID-19 vaccine. Patient was having a lot of bone pain in the arm that patient got the injection at. It was not 'muscle' (not clarified). The outcome of events having a lot of bone pain in the arm that patient got the injection at was unknown. Information on the Lot/Batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911314-1	"bleeding coming from the injection site after the needle was removed his arm; This is a spontaneous report from a contactable other HCP (anesthesiologist) reported for himself. This male patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose on the arm for COVID-19 immunization. Medical history and concomitant medications were not reported. Patient stated after receiving COVID vaccine on an unspecified date (reported as ""today""") he noticed bleeding coming from the injection site after the needle was removed his arm. Patient said he had the vaccine he took the needle out he bled a little bit he said he was afraid he was injected wrong possible into a vein nothing was swollen nothing was bruised red. Patient stated he was unsure if the vaccine was administered intravenously or intramuscularly. Outcome of the event was unknown. The report was assessed as non-serious. Information on the Lot/Batch number has been requested."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911315-1	patient received BNT162B2 vaccine that had been through a temperature excursion; patient received BNT162B2 vaccine that had been through a temperature excursion; This is a spontaneous report from a contactable healthcare professional. This healthcare professional reported similar events for ninety patients. This is one of ninety reports. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), via an unspecified route of administration in Dec2020 as a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. In Dec2020, the patient received BNT162B2 vaccine that had been through a temperature excursion. This was further elaborated as the patient received the vaccine that had been exposed to -50 degrees Celsius for about 20 minutes before being transferred to the refrigerator and then administered within 5 days. The clinical outcome of patient received BNT162B2 vaccine that had been through a temperature excursion was unknown.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020502898 same reporter reporting similar events in different patients with the same vaccine	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911316-1	severe headache with nausea; severe headache with nausea; This is a spontaneous report from a contactable nurse (patient) who reported for herself that a 56-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE. Batch/lot number: EH9899) via an unspecified route of administration on 17Dec2020 at single dose for COVID-19 immunization. Medical history included pulmonary sarcoidosis, thyroid, mild depression. Concomitant medication included famotidine, ibuprofen (DUEXIS). Nurse called in to report side effects, she got her shot on 17Dec2020 and she had a severe headache with nausea about 45 minutes after getting the shot. When probed if still experiencing the event, nurse stated, about 15 minutes it was gone on 17Dec2020. She just took Ibuprofen (MOTRIN) for treatment. Outcome of severe headache with nausea was recovered on 17Dec2020.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events,headache with nausea, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	DUEXIS

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911321-1	tested positive for Corona Virus/ symptomatic and has been sick; tested positive for Corona Virus/ symptomatic and has been sick; This is a spontaneous report from a Pfizer-sponsored program by a contactable other HCP reported for self. This 35-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on an 18Dec2020 10:45 am on left arm at single dose (Lot # EK5730) for routine vaccination. No additional vaccines received on the same date. Vaccination facility type was hospital. None medical history, concomitant medications or past drug history. She has a patient on the line who got the COVID vaccine on Friday (18Dec2020 10:45), and on Sunday (20Dec2020) she tested positive for the Corona Virus. The main reason she called is to figure out what to do about the booster. There is not really enough data to determine this at this point. There was no prescriber. She just received it at the hospital. She is symptomatic and has been sick on 18Dec2020 all weekend. Saturday (19Dec2020) is when she began to have more significant symptoms and on Sunday (20Dec2020) as well. Today, she is better, but still symptomatic. She became symptomatic on Friday night 18Dec2020, and experienced loss of smell, extreme fatigue, mild cough, nasal congestion. She states all were related to COVID. This all started around 7:30 pm. Relevant test included Positive for Corona Virus on Sunday, 20Dec2020. Relevant test included Positive for COVID test (Corona Virus) on Sunday, 20Dec2020. Outcome of the events was unknown.; Sender's Comments: Based on the information currently available, a lack of efficacy with BNT162B2 in this patient might not be completely excluded.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911322-1	arm tingled; a little pain around the injection site; This is a spontaneous report from a contactable consumer. This female consumer (patient) of an unspecified age received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular on 20Dec2020 at 4:00 pm at single dose for COVID-19 immunisation in her left arm. The medical history and concomitant medications were not reported. At 4:00 pm a nurse placed the vaccine in her left arm. When she placed the medication the patient felt a zing and a burning sensation with a tingle down her arm. She didn't say anything, she thought maybe the medication was just a thicker consistency like Betamethasone, which can sometimes burn when injected in the muscle. The patient's arm tingled for about 3 to 5 minutes and then it stopped. The patient felt the medication go in and felt burning and tingling. It's 6pm and the patient feel fine, just a little pain around the injection site. The skin surrounding the injection site was normal in color and cool to the touch. No visible swelling. She personally think she placed the vaccine a little too high and hit a nerve. The outcome of the events was recovered on 20Dec2020 6pm. Information about Lot/Batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911323-1	Muscle ache; Fatigue; Headache; feels Achy; This is a spontaneous report from a contactable Physician. A female patient started to receive started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 17Dec2020 at single dose for covid-19 immunisation. This is unknown to her, but she would imagine the second dose is around 07Jan2021. Medical history, concomitant medications or past drug history were not provided. The patient was experiencing that she was referring to is muscle aches, fatigue, and headache. She doesn't feel sickly but feels achy. It is unknown if the patient ever test positive for Covid, or had antibodies prior to the vaccine. Outcome of the events was unknown. Information about Batch/Lot number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911324-1	entire tongue began to itch; entiere tongue began to itch, tingle; A small bruise-like spot appeared on the tip of her tongue; This is a spontaneous report from a contactable Nurse reported for self. This 65-year-old female patient (not pregnant) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on an 19Dec2020 14:30 on Arm left at single dose (Lot # EKS730) for covid-19 immunisation. Facility where the most recent COVID-19 vaccine was administered: hospital. Medical history included Gastroesophageal reflux disease. Concomitant medications included omeprazole. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Past drug history included Allergies to medications, food, or other products: Bactrim, Cefin. On 20Dec2020 8:30 AM, 18 hours after receiving the vaccine her entire tongue began to itch, tingle. No swelling noted. A small bruise-like spot appeared on the tip of her tongue. 5 hours later the itching stopped (20Dec2020 13:30) and the bruise-like spot began to fade. The spot was completely gone the next morning. There was no trauma to the tongue at any point that would account for the spot. Prior to vaccination, was the patient did not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. No treatments were received for the events. Outcome of the event tongue itching was recovered on 20Dec2020 13:30. Outcome of the event a small bruise-like spot appeared on the tip of her tongue was recovered on 21Dec2020. Outcome of the event tingling tongue was recovered in Dec2020. Events assessed as non serious.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911325-1	developed a slight cough; This is a spontaneous report from a contactable nurse reported for herself. This 25-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 19Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were unknown. The patient received the COVID Vaccine on 19Dec2020. The following day she developed a slight cough on 20Dec2020, and she felt completely fine otherwise. Outcome of the event was recovered. Information on the Batch/Lot number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911326-1	feeling ok not perfect; This is spontaneous report from a contactable nurse reporting for herself. This female patient of unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 21Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were unknown. The patient got the Pfizer Covid-19 vaccine on 21Dec2020 and wanted to know if she was contagious. She stated she knew it's not a live vaccine and it's an MRNA vaccine. Her pharmacist told that she was not contagious, but she just wanted to make sure. The patient was feeling ok not perfect. The patient did not state any side effects. Outcome of the event was unknown. Information about lot/batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911327-1	heaviness in the chest; trembling of the mouth like teeth went on chatter like it is real cold; This is a spontaneous report from a contactable consumer (patient). This 57-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 17Dec2020 at single dose (lot number: EJ1685) for COVID-19 immunization. Medical history included blood pressure abnormal. Concomitant medications included cetirizine hydrochloride (ZYRTEC) and acetylsalicylic acid (ASPIRIN 81) as blood pressure pills. The patient was informing the side effect that she had when she had got the vaccine (Unspecified vaccine). The patient experienced heaviness in the chest and also trembling of the mouth like teeth went on chatter like it was really cold on 17Dec2020. When probed for the lot number, EJ1685 with Pfizer was reported. The patient worked at the hospital. It was just happened between the first 4 hours after receiving. It was not still experiencing. No treatment received for the problem because they left like within the first 4 hours and after that the patient didn't feel anything. Outcome of both events was recovered in Dec2020.	No current illness for this event.	ZYRTEC [CETIRIZINE HYDROCHLORIDE]; ASPIRIN 81

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911328-1	Some chills, temperature; Some chills, temperature; Soreness in the administration site; This is a spontaneous report from a contactable nurse reported for himself. This 51-year old male patient started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 20Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were unknown. On 21Dec2020, the patient experienced some chills, temperature, and soreness in the administration site. The patient was vaccinated at 51 years old. The patient wanted to know if he should isolate himself again, and if he will get Covid again after receiving the vaccine. Outcome of the events was unknown. Information about lot/batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911329-1	Runny nose; Congestion; Malaise; Fever; Chills; This is a spontaneous report from a Pfizer-sponsored program from a contactable consumer (patient). This male patient of unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were unknown. The patient received the vaccination on Friday, 18Dec2020. The patient was experiencing fever and chills Friday night on 18Dec2020. Then he proceeded to receive a runny nose and congestion still at the time of reporting along with a little bit of malaise. He was wondering if he should get tested for COVID-19 due to the symptom or if the symptoms were due to the vaccination. Outcome of the events runny nose, congestion and malaise was not recovered. Outcome of the events fever and chills was unknown. Information on the Lot/batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911330-1	left deltoid hurt a lot for a while; got left actual swelling like in his armpit; This is a spontaneous report from a contactable consumer (patient). This 49-year-old male patient received the 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration at left deltoid on 18Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were unknown. The patient received the COVID vaccine Friday morning as part of work. The patient had a lot of, kind of significant actual swelling in the (incomplete sentence). The patient was too much concerned about this, but it was out of the ordinary enough that the patient felt it was worth reporting. So the patient got the vaccine in his left deltoid and the left deltoid hurt a lot for a while but currently the patient got left actual swelling like in his armpit it's, where the lymph nodes were, the patient got a very significant swelling. The patient stated he was experiencing it on 20Dec2020. So his age was 49 years. The patient was assuming it was a normal immune response, but he never had it with the flu vaccine or anything, so the patient wanted to report it. It's a COVID-19 Vaccine. No treatment was received for events. Outcome of the events was unknown. Information about lot/batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911331-1	sore and heaviness on the injection site; heaviness on the injection site; This is a spontaneous report from a contactable Nurse (patient) via Pfizer sales representative. This female patient of unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. Medical history and concomitant medications were unknown. The patient posted on Social Media that she was injected with COVID 19 vaccine. As per her comment, after 8 hours she experienced sore and heaviness on the injection site. Outcome of the events was unknown. Information on Lot/Batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911332-1	mild COVID symptoms; front line nurse and received it because of that; This is a spontaneous report from a contactable nurse. A female patient of unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on an unspecified date at single dose for treating COVID patients. Medical history included COVID. Concomitant medications were unknown. The patient had COVID previously, received the vaccine, and was currently experiencing mild COVID symptoms. The patient received vaccine from the hospital, so there was no prescriber. Patient was a front line nurse and received it because of that. Outcome of the events was unknown. Information about batch/lot number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911333-1	"Cough; Got a COVID test; positive; 4 hours after, my arm became sore; body aches; Still feel sick but not as sick as I was; shortness of breath; fever; Developed like pretty bad symptoms; This is a spontaneous report from a contactable nurse reported for himself. This 38-year-old male patient received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration at arm on 16Dec2020 at single dose (lot number: PAA156051) for vaccinated against COVID 19. Medical history included HIV. Concomitant medications included bictegravir sodium/emtricitabine/tenofovir alafenamide fumarate (BIKTARVY) for HIV. The patient had received the Pfizer vaccine for COVID 19 on 16Dec2020 (Wednesday). And then the patient developed like pretty bad symptoms. Then, when the patient went to get tested because he suddenly started having like a cough at night on 16Dec2020 and got a COVID test and it was positive on Dec2020. The patient was a nurse in the emergency room and just wanted to report that. The patient knew scientifically it couldn't give him the virus. The patient didn't have any symptoms of COVID. So, after the patient got the shot, 4 hours after, his arm became sore and then 12 hours after, he had body aches, fever, cough, shortness of breath on Dec2020. About Lab Work, the patient stated, ""Just the COVID one."" And the patient got positive results for COVID test. Due date for the next shot was 06Jan2021. When asked if he was still experiencing cough, the patient stated he still felt sick but he was not as sick as he was. The first 2 or 3 days were really bad. About treatment, the patient stated, ""Nothing for the cough but I took Tylenol."" Outcome of the events was unknown. Information about batch/lot number has been requested."	No current illness for this event.	BIKTARVY

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911334-1	Hives; felt itching to her scalp; This is a spontaneous report from a contactable other hcp (patient). This 38-years-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EK5730), intramuscularly on 21Dec2020 06:40 at single dose on left deltoid for COVID Prevention. Medical history included Polycystic ovarian syndrome, was diagnosed with this in her early 20's and ongoing. Hypothyroidism from 2015 and ongoing. Corneal abrasion from 2020 and ongoing (Patient got a corneal abrasion to her right eye, about a week ago and is currently using eye drops for prophylaxis against infection), and anaphylaxis. Concomitant medication included metformin tablet oral at 750mg, once daily for Polycystic ovarian syndrome, she has been taking the product on and off since being diagnosed with PCOS and ongoing. thyroid (ARMOUR THYROID) oral at 60 (unsure if the product is MG or MCG) once daily for Hypothyroidism, started product four or five years ago and ongoing, moxifloxacin hydrochloride (VIGAMOX) at 1 drop to right eye, three times daily for Infection prophylaxis from Dec2020 and ongoing, patient got a right corneal abrasion last week and is using the product as infection prophylaxis. The patient was a Physician Assistant, who works in the ER, who just received the COVID vaccine at work. The patient stated that she got hives after her injection. The patient received the vaccine today at about 6:40AM. She stated that she was instructed to wait 30 minutes after receiving the vaccine because she does have a history of anaphylaxis, but not to vaccines. So it was about 5 to 10 minutes before her 30 minute wait time was up, that she started getting the hives on 21Dec2020. She stated that the hives she got started on her left wrist, and then they worked to bilateral upper arms, and then she also felt itching to her scalp but states she did not feel a rash on her scalp. She took 50mg of Benadryl orally for treatment. It was stated that the hives have resolved at this time, but patient was unsure as far as outcome goes, because she took Benadryl and the hives are gone now, but she does not know if they will return or not. She stated that she only had to take Benadryl and she declined checking in to the ER, so she considers this, not serious. The outcome of hives was recovered, of felt itching to her scalp was unknown.	Corneal abrasion (got a corneal abrasion to her right eye, about a week ago, currently using eye drops for prophylaxis against infection.); Hypothyroidism; Polycystic ovarian syndrome (Caller was diagnosed with this in her early 20's.)	; ARMOUR THYROID; VIGAMOX
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911335-1	fatigue; This is a spontaneous report from a non-contactable consumer (patient) via Pfizer sales representative. This patient of unspecified age and gender received first dose of BNT162B2, from an unspecified date at single dose for COVID-19 immunisation. The patient medical history and the concomitant medications were not reported. The patient experienced fatigue the day after the first dose. The outcome was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911336-1	body aches; pregnant patient received BNT162B2 for COVID Prevention; pregnant patient received BNT162B2 for COVID Prevention; pregnant patient received BNT162B2 for COVID Prevention; This is a spontaneous report from a contactable physician (patient). This 35-years-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EH9899), intramuscularly on 19Dec2020 at single dose in right upper arm for COVID Prevention. Medical history was none. Concomitant drug included unspecify drugs. The patient got the vaccine on 19Dec2020, and then that evening she had body aches. She stated that she took 1000mg of Tylenol by mouth because she was really achy, but she was fine by the next day. She was pregnant. Patient last menstrual period date was 08Sep2020. She does take another medication but she does not think it was associated with the body aches she experienced. The outcome of Body aches was recovered on 20Dec2020, of other events were unknown. Primary Source Reporter assessed Body aches related by Method of assessment.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911337-1	Weakness; Lightheadedness; fast heart beat/heart rate is 101; coughing a little bit; panic attack; he was not acting well and his blood pressure was 158/98; he feels silly then has nervousness; he feels silly then has nervousness; feeling tired; not feeling well; This is a spontaneous report from a Contactable consumer (patient). This 52-years-old male patient received first dose of BNT162B2(PFIZER-BIONTECH COVID-19 VACCINE) (lot number: AK5730), on 20Dec2020 at single dose on left arm for COVID-19 immunisation. Medical history included Blood pressure high. The patient's concomitant medications were not reported. He had one injection given in his left arm around 08:30 or 08:40 in the morning on 20Dec2020, before 9 o clock. He says that they let him rest for 15 minutes after his injection, and it is a delayed reaction that just started this morning and he tried to go to work and had to go home. The patient got the vaccine on yesterday morning then tried to come to work on this morning but he was feeling weak and having light headedness, and his heart beat is so fast. He did go home to try to relax. He said he experienced a panic attack at some other times where his heart beat fast and he was quite light headed at some other times gone from rest and got up to walk or try to do something, and that's why he had gone home after he reported to work earlier. He says just now also trying to have something to do he is feeling it. He says that he took Tylenol and some cough syrup for feeling lightheaded and weak. He clarifies that he took Tylenol yesterday and then after he took vaccine and this morning the nurse gave him Tylenol also. He says he told them he was not feeling well, he felt silly and weak. They told him to go home because he told them he was not acting well and his blood pressure was 158/98. He has been doing Lisinopril 20mg for his high blood pressure, and he has been on it for a long time. He says that the label says discard after 01Oct2021. He says he takes 20mg once a day by mouth, and he keeps refilling it every 30 days. The patient took the cough syrup because he was coughing a little bit. He says that the EXP date on the Tylenol he took that he has at home is Mar2022. He provides EA013 as LOT and dose strength as 500mg. He says he took this last night and this morning at the facility they gave him the 500mg dose too. He says that he took vitals with his nurse, and his heart rate is 101. The patient asks what can he do since he is worried about reading side effects of vaccine so now he is feeling fine, then some other times it comes like first time this morning at work he feels silly then has nervousness or something and a panic attack, so they let him go home. He says he got home, and was feeling fine again. He says he tries to go to the bathroom, or tries to do something in his garage, and feels light headed and is feeling tired. He says he would like to know if that is normal, should he take anything. Lab data on 21Dec2020 included Blood pressure was 158/98, Heart rate was 101. The outcome was unknown.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911338-1	rigors; This is a spontaneous report from contactable physician via Pfizer sales representative. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911341-1	tachycardiac; Low grade like a 99.8; This is a spontaneous report from a contactable nurse (patient). A 32-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899), via an unspecified route of administration on 17Dec2020 at single dose at the left deltoid for immunization. Medical history included tachycardia heart condition (had an underline heart condition that was a tachycardia heart condition). There were no concomitant medications. Patient got Pfizer vaccine on 17Dec2020. Patient really had not had any side effects except had a low grade like a 99.8 yesterday (in Dec2020). Which was probably just the vaccine patient was assuming probably just the vaccine had to do like kid when they get in then they get a little fever. On 19Dec2020, though however patient had tachycardia. Like right now patient was in 130 and blood pressure didn't read when went to stand. And patient had drink plenty fluids all day on 18Dec2020. Patient previously did have an underline heart condition that was a tachycardia heart condition. Patient had not had any issues with heart for about. Because the last time had it was about 2 years ago. Patient had a cardiac condition that caused her to be tachy-cardiac. But it was usually only when she was pregnant. But patient was not pregnant and it had been about 2 years since last episode of this. And the only this that changed was this on 17Dec2020. So, this was the first time patient had had anything that changed after getting that vaccine. Patient did not take any medication. She used to be on a beta blocked but she was recently taken off of that (She don't know 3 months ago). Outcome of events was unknown.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911342-1	Tingling down entire left side of body, from face to foot.; Numbness and tingling of left side of face.; Had headache temporarily (resolved). Mostly on right side behind eye; This is a spontaneous report from a contactable Other HCP. This Other HCP reported for herself that the 48-year-old female patient received fist dose of bnt162b2 (BNT162B2, Batch/lot number: EK5730), via unknown route of administration in left arm on 21Dec2020 07:45 PM at single dose for covid-19 immunisation. She is not pregnant at the time of vaccination. Medical history included History of breast cancer. Past drug event included Known Allergies to medications, food, or other products: Codeine. Concomitant medications included tamoxifen. Facility type vaccine Hospital. No other vaccine in four weeks. Other medications the patient received within 2 weeks of vaccination included Tamoxifen, multi-vitamins, hair, skin and nails. The patient experienced Tingling down entire left side of body, from face to foot. Numbness and tingling of left side of face. Feel like I got Novocain shot in face. Had headache temporarily (resolved). Mostly on right side behind eye from 21Dec2020 08:00 PM. Outcome of the events was not recovered. No covid prior vaccination. No covid tested post vaccination. Facility where the most recent COVID-19 vaccine was administered was Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. No treatment was received for the adverse event. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, has the patient has not been tested for COVID-19. Vaccine Facility information available. Location of injection information is available for all vaccines received on the same date.	No current illness for this event.	Tamoxifen; Multivitamins; Hair, Skin and Nails Vitamins
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911343-1	"I have had an excruciating back and hip pain; I have had an excruciating back and hip pain; I can barely walk around; This is a spontaneous report from a contactable consumer. This consumer (Respiratory therapist) reported that the 64-year-old male patient received bnt162b2 (BNT162B2, Pfizer BioNTech Covid 19 Vaccine), via unknown route of administration on 16Dec2020 at single dose for covid-19 immunisation ("It helps so that I won't get Covid."). Medical history included Blood pressure. Consumer stated, ""I need it to report that I have had an excruciating back and hip pain. This is the fifth day and I still have pain but its slightly better but I don't think I am going to work today or tomorrow. I can barely walk around."" Consumer stated, ""It was given to me by a nurse at hospital."" Consumer stated, ""I take a high blood pressure medicine."" Consumer stated, ""I didn't take any Lab work."" Treatment was received and consumer stated, ""Yes I tried ibuprofen."" The outcome of the events was unknown. Information about lot/batch number has been requested." COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911345-1	"Headache; shivers; coldness; body aches; mouth hurts; feel very weak; This is a spontaneous report from a Pfizer-sponsored program Pfizer First Connect. A contactable consumer reported for self that the female patient of unknown age received bnt162b2 (BNT162B2, reported as PFIZER-BIONTECH COVID-19 VACCINE), via unspecified route of administration on 18Dec2020 at single dose for covid-19 immunisation. Medical history and concomitant medications were unknown. She had a COVID vaccine shot on Friday, on 18Dec2020, now she is experiencing a headache. She would like to know if headache is normal or if she should go to a doctor. Upon callback, consumer states she received the Covid19 vaccine on Friday 18Dec2020, and is experiencing "shivers, coldness, body aches, headache, mouth hurts, I feel very weak". Consumer wants to know if these things are normal, and if she needs the second dose. She wants to "make sure she's not dying". "Can I use antipyretics before or after vaccination with the Pfizer-BioNTech COVID-19 vaccine?" Response: The interim ACIP guidelines note that, "Antipyretic or analgesic medications (e.g., acetaminophen, nonsteroidal anti-inflammatory drugs) may be taken for the treatment of post-vaccination local or systemic symptoms, if medically appropriate. However, routine prophylactic administration of these medications for the purpose of preventing post-vaccination symptoms is not currently recommended, as information on the impact of such use on Pfizer-BioNTech COVID-19 vaccine-induced antibody responses is not available at this time.& quot; If you are a patient, you should discuss this with your healthcare provider. The outcome of the events was unknown. Information about Batch/Lot number has been requested."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911346-1	She woke up miserable and is still miserable now; she has had a fever of 101.6/It spiked to 103.1; Dry cough; neck pain; swollen lymph node and glands; headache; napped a lot; hot flash; sweaty; off balance and shaky; felt tired all day; joints felt a bit achy/achy joints/shoulder pain; This is a spontaneous report from a contactable Nurse (patient). A 43-years-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: E10140) intramuscular in her left deltoid on 20Dec2020 08:25 at single dose for COVID-19 immunization. There was no other additional vaccines administered on same date of the pfizer suspect. Medical history included had COVID from Aug2020 to an unknown date and had a pulse-ox. The patient did not have any other medical history. She has had no reactions to any other vaccines before. Her father died of heart attack but with no other medical history prior to that. Her mom died of a brain tumor. In her extended family there is high blood pressure and high cholesterol. She has not personally be diagnosed with any of these conditions. She is healthy. She has no history of any allergies and again repeats she has never had this side effect with anything. Concomitant medications included over the counter vitamins regularly. The patient has had a fever of 101.6 about 24 hours after getting the shot. It spiked to 103.1. She has had a dry cough and all the other common sides effects reported with the vaccine. There is nothing to do but treat the symptoms. She has let her primary care doctor know via email but he is out of the office through today so she hasn't heard back. She had a Fever of 101.6 that was noticed at 2am after the shot, on 21Dec2020. When she woke up about 10 minutes ago is when she noticed a fever that spiked to 103.1, it is about 1:20pm where she is located. The dry cough started around 8am 21Dec2020, she took cough medication and has used her inhaler to stay on top of the cough. Her per-ox readings have been fine and she is at 97-98%. She has a pulse-ox because she had COVID Aug2020 and was out of work 6 weeks and on home oxygen. She felt if she got COVID again she would die so she would rather have the vaccine. She notes that about 15 minutes after getting the shot while they were monitoring her, she was joking with the nurse, she experienced what felt like a hot flash and was sweaty on 20Dec2020. She was off balance and shaky on 20Dec2020. This lasted about 15- 20 minutes and then she was fine. Afterward, she did notice she felt tired all day on 20Dec2020 and napped a lot. Also it was reported that her joints felt a bit achy throughout the day. She has never had a reaction to a vaccine before. Other events experienced were neck pain, swollen lymph node and glands, neck and shoulder pain, headache on 21Dec2020, and achy joints on 20Dec2020. All the events have gotten worse since starting. The fever, neck pain, swollen lymph node and glands, neck and shoulder pain, and headache were noticed about 2am. She woke up miserable and is still miserable now. The patient received Tylenol, Benadryl, Advil, cough medication and an inhaler as treatment for events. No any event required a visit to emergency room or physician office. Seriousness criterial for events fever, dry cough, neck pain, swollen lymph node and glands, Aching joints, Headache, felt tired all day, hot flash and was sweaty, off balance and shaky was medically significant. Events outcome of fever, dry cough, neck pain, swollen lymph node and glands, aching joints, headache, felt tired all day was not recovered (reported as worsened), events outcome for hot flash and was sweaty, off balance and shaky was recovered on 20dec2020, while for other events was unknown. Relatedness of drug to reactions for fever, dry cough, neck pain, swollen lymph node and glands, aching joints, headache, felt tired all day was related per primary source reporter.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911354-1	"Dizzy; I felt really weak; Shortness of breath in getting up the stairs; The shortness of breath freaks me out, I think that's where the anxiety comes in; I think the midsternal chest pain was my anxiety but like a little bit; started feeling very like flu; Headache; Weakness; Fatigue; Muscle ache; I also have like really swollen lymph nodes, my lymph nodes feels like draining right now; The shortness of breath must have pain and issue for me; This is a spontaneous report from a contactable nurse (patient). A 32-years-old female patient received bnt162b2 (BNT162B2), via an unspecified route of administration on 19-DEC-2020 07:30 at single dose for covid-19 immunisation. The patient medical history was not reported. Concomitant medication included buspirone hydrochloride (BUSPAR), omeprazole (OMEPRAZOLE), lithium (LITHIUM), doxycycline (DOXYCYCLINE) for infection right now in her toe. The lithium cause 'sinus' reflux asthma. Nurse reported an adverse effect, was kind of confuse if it is related or not. She felt good for first 15 minutes and when she was about to leave. she was not afraid of shot. she felt dizzy and then she had to go upstairs and she felt really weak and Shortness of breath getting up the stairs, to get to her car. The shortness of breath freaks her out, she think that's where the anxiety comes in, she started driving home and she had had shortness of breath, she think the midsternal chest pain was her anxiety but like a little bit. she am not sure. In '12' hours later she went to work she started feeling very like flu, she started flu like with headache, weakness, fatigue, muscle ache. she was working in ER and it is hard to work and then 20Dec2020 she was still feeling bad but little bit better than first day and shortness of breath that was still there like all day the day before. she also had like really swollen lymph nodes, her lymph nodes feels like draining right now. Nurse stated she was taking Omeprazole. That was wired because she have 'sinus' (Further not clarified, hence not captured in tab) reflux asthma, so the shortness of breath must have pain and issue for her but Omeprazole have stopped it, so before taking the vaccine she thought she was completely fine but then after taking the vaccine, it was like she have the issue again like it was controlled before the vaccine. Result of lab test: TSH was 8. So it was elevated but that was because of lithium and then she reduced the dose so it should be better now. So every result was normal."" Results of tests and procedures for investigation of the patient: Test: CBC, CMP, Lithium level, TSH: Thyroid panel unknown result."	No current illness for this event.	BUSPAR; ;

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911361-1	I have good and bad side effects, first of all I have trouble, pain in my knees and today I relieved from much pain in knees; Pain in the arm; Headache; Diarrhea; started with a feel and now it was more, it was a pain, it was like a crack in her abdominal; This is a spontaneous report from a contactable consumer (patient). A 52-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 17Dec2020 08:15 at single dose for COVID-19 immunization. The relevant medical history included thyroid disease and arthritis (have problem with her knees and they said it arthritis). Concomitant medications included vitamin c, vitamin d3 and vitamin e, all from an unspecified date for thyroid disease. The patient stated that first moment it was okay, not feeling much just the pain in the arm on 17Dec2020 and in the next day she had good and bad side effects, first of all she had trouble, pain in her knees on 18Dec2020 and at the time of the report she relieved much from pain in knees, they came back but that was okay. She had a little headache, not much on 17Dec2020. But at the time of the report like an hour prior to the report she started with diarrhea in Dec2020. Diarrhea was getting worse, it started with a feel and now it was more, it was a pain, it was like a crack in her abdominal, she had gone to the bathroom few minutes prior to the report and almost she felt like she had to go again. The patient did not ask the dose and stated that they were supposed to give her a one dose, it was her first dose, her second dose coming on 07Jan. The outcome of the event pain in the arm was unknown, for event arthralgia was recovering, while the other events were not recovered. Information about Lot/Batch number has been requested.	No current illness for this event.	VITAMIN C [ASCORBIC ACID]; VITAMIN D3; VITAMIN E [VITAMIN E NOS]

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911362-1	<p>"Lost weight; Achiness; Tired; Headache; her daughter was tested positive for COVID/ she was around her daughter; Blurriness; I could hardly see; A little bit of vision changes; eyes, both days, yesterday they were swollen, 'puffy' and draining a little bit; eyes, both days, yesterday they were swollen, 'puffy' and draining a little bit; eyes, both days, yesterday they were swollen, 'puffy' and draining a little bit; Nauseous; This is a spontaneous report from a contactable Nurse (patient). A 54-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 17Dec2020 at single dose for COVID-19 immunization. The relevant medical history included blood cholesterol and sinus problem. Concomitant medications included pravastatin for cholesterol. The patient stated that she received the immunization on Thursday at the hospital that she worked at and Saturday and then at the time of the report her eyes, both days, yesterday they were swollen, 'puffy' and draining a little bit on 19Dec2020. Today they were too this morning. So, that got better than yesterday because she cold compresses on them. For the next shot, the patient stated that she was not so sure, it was within 21 days. An appointment was set-up, she just had to look. It was during work, so she was working. She went downstairs, she got the show. She sat there while they watch her for several hour, observation time and she got on her phone and scanned in something. Maybe appointment but she got to work. She didn't write it down. The patient stated that her daughter was tested positive for COVID on Monday. And they said her to get test it because she was around her daughter. And then they weren't so sure whether or not to give her the vaccine. But they said it was okay so they did. She was negative at that time. The patient stated Friday at work, she didn't feel anything because she was working around, almost 3:30 or 4 O' clock on Thursday. She was nauseous all day at work on 18Dec2020. And just the minor ones that they had. That was to be expected, the achiness, felt a little swollen, tired, headache. But she was okay to work. But then at the time of the report after her eyes been swollen yesterday. She got up to get ready for work but her eyes were like. At that time in the morning on 19Dec2020 she could hardly see out of them. But they were much better at the time of the report. The patient had this mask that was a gel pack. So, it was bit of like a cold compress. And put Vaseline and they told her to get another COVID test. The patient had some vision. Some blurriness and just a little bit of vision changes on 19Dec2020. That she had not noticed at the time of the report. So that was resolved she thought. The patient underwent lab test included COVID test on an unspecified date which showed negative; weight on an unspecified date which showed about 186 pounds (she lost weight, so she might be a little more, she just hadn't checked). Therapeutic measures were taken as a result of the events "" eyes, both days, yesterday they were swollen, 'puffy' and draining a little bit"". The outcome of the events ""eyes, both days, yesterday they were swollen, 'puffy' and draining a little bit"" was recovering, for the event ""Blurriness; I could hardly see; A little bit of vision changes"" was recovered on an unspecified date, the other events were unknown. Information on Lot /Batch Number has been requested."</p>	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911363-1	<p>"I was not feeling well and I actually was like feeling really sick; I was feeling really like weak; I was not feeling well and I actually was like feeling really sick; I was feeling really like weak; I was not feeling well and I actually was like feeling really sick; I was feeling really like weak; I had to throw up; I ended up falling on floor; Arm started hurting; I was getting like crampy; I had to throw up; I ended up falling on floor; This is a spontaneous report from a Contactable consumer. This consumer (patient) reported that the 59-year-old female patient received (BNT162B2), via an unspecified route of administration on 18Dec2020 (yesterday morning about 6:30) at single dose for covid-19 immunization. Medical history included Allergy and consumer stated, ""No, I take Zyrtec D for my allergies. But I have not taken any because I was feeling better from it. So, my doctor said you don't need to take it all the time, just take as you needed."" Concomitant medications included cetirizine hydrochloride/pseudoephedrine hydrochloride (ZYRTEC-D) for Allergy. The patient experienced ""I was not feeling well and I actually was like feeling really sick, I had to throw up, I was getting like crampy. And usually when I throw away I lie down but I didn't and I ended up falling on floor, I was feeling really like weak, Arm started hurting, I was getting like crampy"". No Investigation Assessment. Consumer stated, ""Actually I was just calling to report because I have taken the COVID shot, yesterday morning about 6:30 and I got some side effects from it. So, I was just calling, I guess it is just pamphlet and stuff."" Consumer stated, ""Yes I called off my work because I rescheduled my job today but I couldn't go because I was not feeling well and I actually was like feeling really sick. And I had to throw up. And then I was getting like crampy. And usually when I throw away I lie down but I didn't and I ended up falling on floor. So, I am okay but I didn't go to work because I was feeling really like weak."" Consumer stated, ""Actually they had it done it with the hospital. So, I didn't go to the doctor. They just had a, had to just go on the computer and go to that setup. And then I had an appointment yesterday at 6:30, that's when I got the shot taken at 6:30 in the morning. Consumer stated, ""What is that for? They gave me an envelope, I don't know they gave me a card too. Is that on that card? They schedule me my other appointment, I mean to get my other shot. When I have to get the other one I guess. I don't know why I can't find it. We found the card. It says dose COVID-19, it's Pfizer and then it's looks like E and then it's a J or a T, looks like a J or a T the way wrote it, we'll just go ET1685, I guess. Due date for next shot is 08Jan2021 at 9:15 am."" Consumer stated, ""That's the vaccine because I work around, I work in Intensive Care Unit. And it is pretty much second floor and in COVID unit. So, that's why I wanted to get it for my safety. Consumer stated, I did get them like 2 O' Clock this morning. My arm started hurting towards later in this evening and then I woke up and it didn't help me."" Consumer stated, ""No I feel better when I got up because I didn't go to work because I was a little not, you know weak and kind of. So, I called off my job because I don't want to be going over there and. Yeah I feel better, my stay close to bed because I fell."" No treatment was received. The outcome of the events was unknown. Information on the Batch/Lot number has been requested."</p>	No current illness for this event.	ZYRTEC-D

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911364-1	Hives around the injection site; This is a spontaneous report from a contactable consumer (patient). A 38-year-old male patient received the 1st dose of bnt162b2, Pfizer vaccine, lot number: EK5730, expiry date: Mar2021, via an unspecified route of administration in the right arm (deltoid) on 20Dec2020 11:10 at a single dose for COVID-19 immunization. Medical history included hypertension and diabetes mellitus. Concomitant medications included metformin since diabetic, aspirin [acetylsalicylic acid] on 20Dec2020, and ongoing zinc. The patient experienced hives around the injection site on 21Dec2020 05:30. The event was described as follows: after getting the vaccine, he woke up with hives around the injection site. It is itchy, crater-ish like. If you touch it is tough and it feels like one was bit by ants. This on the arm and head. It is bigger on the head. It is like huge bumps. He has been calling his HCP all morning, but has not heard anything back from the doctor. He is calling to see if there were any recommendations, ointments, or anything he can take. He mentioned he took Benadryl this morning for it. He went on to further explain when he woke up 5:30 am this morning he had a bunch of bumps that were itchy, like ants or mosquitoes biting. They were pretty big. He has one on his collar bone. It is stiff and hard. The bumps are spreading towards the back of his back. He also has it on his left shoulder as well. He provided the hives as the same to worse. He added on his arm near the injection site is a lot worse compared to his forearm. Near the injection site it is also warm to touch. He stated this was typical symptom from what he read. He received the vaccine at 11:10 am. The patient is scheduled to get the second dose on 10Jan2021. The event did not require patient to visit the Emergency Room and the Physician Office. The reporter stated he has been trying to contact his physician to determine if his events are severe enough to go to the ER. He was informed that his doctor has been booked all day. He may have to go to the night clinic if does not get better. Outcome of the event was not recovered.	No current illness for this event.	; ASPIRIN [ACETYLSALICYLIC ACID];
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911365-1	urticaria to bilateral upper extremity (BUE); This is a spontaneous report from a contactable nurse (patient). A 33-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE lot/batch number not provided), via an unspecified route of administration on 19Dec2020 21:00 at SINGLE DOSE for COVID-19 immunization at the hospital. Medical history included diabetes mellitus (DM), hypertension (HTN), depression, obesity, hyperlipidaemia (HLD), migraines, and degenerative disk disease (IDD). The patient also had allergies with sulfa, oysters, and adhesives. Concomitant medication included insulin aspart (NOVOLOG), bupropion hydrochloride (WELLBUTRIN), metformin (METFORMIN), sumatriptan (SUMATRIPTAN), and losartan potassium (LOSAR) for unknown dates and indications. Prior to vaccination, the patient was not diagnosed with COVID-19 and had not been tested for COVID-19 since vaccination. On 19Dec2020 17:00, the patient experienced urticaria to bilateral upper extremity (BUE). The patient did not received any treatment for the event. The patient was recovering from the event. Information on the Lot/batch number has been requested.	No current illness for this event.	NOVOLOG; WELLBUTRIN;; LOSAR [LOSARTAN POTASSIUM]
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911366-1	Soreness in left upper arm; This is a spontaneous report from a non-contactable consumer. A 28-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number and expiration date were not reported), via an unspecified route of administration on the left arm on 20Dec2020 at a single dose for covid-19 immunization. There were no medical history and concomitant medications. The patient had no known allergies to medications, food, or other products. The patient was not pregnant. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not diagnosed with COVID-19 prior to vaccination and had not been tested for COVID-19 since the vaccination. The patient experienced soreness in left upper arm starting several hours after administration on 20Dec2020. Soreness was worst the next morning. No treatment was received for the adverse event. However, the outcome of the event was recovering. The event was considered non-serious. No follow-up attempts are possible; information about lot/batch number cannot be obtained.	No current illness for this event.	No other medications for this event.

Medical history prior history of allergies requiring allergy shots, GERD , GERD and Sulfa and environmental/food allergies , food allergy .Concomitant medication included ibuprofen and cetirizine hydrochloride (ZYRTEC). No Covid prior vaccination and no covid test vaccination provided . On17Dec2020 at 01:15 PM , the patient experienced Flushing and tongue numbness within 2-3 minutes of vaccine administration and lightheadedness for 2 hours after vaccine.All events were reported as non-serious. Patient received treatment with Benadryl 25 mg PO (per oral).The outcome of the events was recovered in Dec2020. Information on the lot/batch number has been requested.	No current illness for this event.	; ZYRTEC [CETIRIZINE HYDROCHLORIDE]
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911368-1	a few blisters near the injection site; Arm soreness; This is a spontaneous report from a contactable consumer. A 29-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 19Dec2020 at single dose for immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient experienced a few blisters near the injection site in addition to arm soreness on 20Dec2020. Outcome of events was unknown. Information about lot/batch number has been requested.	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911369-1	Dizziness; Fatigue; got the injection his left arm was a little sore/Severe left arm pain, soreness, throbbing; intermittent kind of dyslexia; This is a spontaneous report from a contactable consumer (respiratory therapist - patient himself). A 52-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE lot/batch number EK5730) via an unspecified route of administration on the left arm on 17Dec2020 at SINGLE DOSE for COVID-19 immunization (also reported as vaccination). Ongoing medical history included type 2 diabetes mellitus since Dec2003, renal disorder (reported as kidney prevention) and blood cholesterol abnormal (cholesterol was not high, but because of Type II Diabetes his doctor wanted to keep it at bay). Ongoing concomitant medications included metformin (METFORMIN) since Jan2004 for type II Diabetes, lisinopril (LISINOPRIL) since May2020 for kidney prevention and atorvastatin (ATORVASTATIN) since May2020 for cholesterol. On 17Dec2020, the patient had first dose administered of BNT162B2. When he got the injection, his left arm was a little sore (like if he leaned against his left arm or rubbed it he would notice the soreness). About mid-morning on 20Dec2020, his left arm just started throbbing like he had just blocked a lacrosse ball shot, severe left arm pain, and soreness. He also had onset of dizziness and fatigue as well on 20Dec2020. He went on, did a heating pad and ibuprofen and all that stuff and all that went on. He found it odd because these events did not start until around like 3 days after the injection was administered though the paperwork showed that these kind of events are expected in the first couple of days after product administered. On 21Dec2020 when he woke up around 11:30am, the throbbing went away, he was not as dizzy as before but still super fatigued and tired (then further stated that maybe a little bit better because he does not have that constant pain constantly draining him). The patient also mentioned that he wondered if there was an intermittent kind of dyslexia that he has because he will transpose words and just last week learned how to spell received without having to tell himself 'i before e except after c'. He also mentioned that he was tested like 4 times for COVID-19 and was negative every time in 2020. The outcome of the event of dyslexia was unknown while recovering for the remaining events.	Blood cholesterol abnormal (his doctor wanted to keep it at bay); Kidney disorder; Type II diabetes mellitus	;;
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911370-1	Tiredness throughout the day; slight lightheadedness; slight headache; This is a spontaneous report from a contactable pharmacist (reporting for himself). A 38-year-old male patient received the first dose of bnt162b2 (BNT162B2, lot number and expiry date were unknown), intramuscular on 21Dec2020 09:30 on the left arm at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. On 21Dec2020, the patient experienced tiredness throughout the day, slight lightheadedness and slight headache. There was no treatment that was received for the events. The events were considered non-serious. The most recent COVID-19 vaccine was administered in the hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The outcome of the events was recovering. Information about Batch/Lot number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911371-1	Soreness in the arm more than any other vaccine in the past. This is a spontaneous report from a contactable Other Health Professional (patient). A 31-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: EJ1685, via an unspecified route of administration in the left arm, first dose on 19Dec2020 14:15 at a single dose for immunisation. The patient's medical history and concomitant medications were not reported. The patient is not pregnant. She had not had other vaccines within four weeks prior to vaccine and she had no other medications in 2 weeks. Adverse event reported was soreness in the arm more than any other vaccine in the past. The onset was on 20Dec2020 with outcome of recovered in Dec2020. She took an over the counter ADVIL. She did not have covid prior vaccination nor had she tested post vaccination. The event was reported as non-serious.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911372-1	"Chills; I felt like I am getting a fever; like flu like symptoms; nausea and that is why my voice is like this; nausea and that is why my voice is like this; felt like fatigued and tired; Numbness; This is a spontaneous report received from a contactable consumer (patient). A 41-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via an unspecified route of administration, on 18Dec2020, at single dose, for COVID-19 immunization. Medical history included hypertension (also reported as borderline hypertension, which was before, and the patient got better). The patient reported exercising, he was heavier, but he is losing weight now. There were no concomitant medications. The patient reported, "I got my COVID vaccine last Friday, that would be on the 18Dec2020. So I feel like I see the side effect of having it, (voice incomprehensible). The day that I got it, when I got back, on 18Dec2020, I felt like fatigued and tired. And then on Saturday (19Dec2020), which I was off, I felt a little better. But then, you know, I had a little numbness (Dec2020) but it disappeared. And then on Sunday, I went to work and last night (20Dec2020), I just woke up and I had chills and I felt like I am getting a fever, like flu like symptoms like nausea and that is why my voice is like this. Is it normal to feel after 3 days this side effect? I mean actually I was reading the paper that I got it because I need to, because I have work today, I need to inform my manager that I cannot go to work because I am feeling this side effect and I don't want him to think that you know." The patient did not have lab work done and did not receive treatment for the events. The outcome of fatigue was recovering, numbness was recovered on an unspecified date in Dec2020, and the outcome of the remaining events was unknown."	No current illness for this event.	No other medications for this event.

Medical history and concomitant medications were not reported. It was reported that the patient was a 23 years old nurse and received the Covid 29 vaccine on Saturday morning. Sunday she developed a headache fever of 100 and fatigue. Monday she developed a non productive cough as well as mild fever 99.5, fatigue, and the headache was reduced. It was also reported that the patient was tested Covid 19 positive on 22Dec2020. The outcome of the events were unknown. Information on the lot/batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911376-1	Diarrhea; she could feel her stomach again; This is a spontaneous report from a contactable consumer. A 64-year-old female patient received the first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA Vaccine BNT162B2; lot number: EH9899), via an unspecified route of administration on 17Dec2020 at a single dose by injection once so she doesn't get COVID. The patient's medical history was not reported. There were no concomitant medications. The patient experienced diarrhea on 19Dec2020. The patient just thought about it, she had diarrhea, she had said everything is good, but she didn't think about it when answering the questions, when she eats the food, she notices, she got the COVID vaccine. She doesn't know how to change responses to the questions. She answered no to them, but this could be tied together. Every time she eats, she gets diarrhea. Patient got the COVID test. She wanted to change answers, but it wouldn't let her. Patient could feel her stomach again in Dec2019, but she hasn't eaten. This was the first time she received the vaccine. The outcome of the events was unknown.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911377-1	mild rash around the injection site; This is a spontaneous report from a non-contactable consumer. A 50-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE lot/batch number not provided), via an unspecified route of administration in 2020 at SINGLE DOSE for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. In 2020 (five days after vaccination), the patient experienced mild rash around the injection site. Outcome of the event as unknown. Information about lot/batch number cannot be obtained. No further information is expected.	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911378-1	Rash/rash did have a pretty discreet or distinct area around the injection site; She says it was pretty red and you could tell the area was swollen at first, and it has faded; She says it was pretty red and you could tell the area was swollen at first, and it has faded; She says that the rash this morning has spread to her left chest wall and breast area, and she was looking at her body in other places and saw the reaction was on the rest of her body too/rash had maybe a little mild itch; injection site may bleed longer which was the only thing notable; This is a spontaneous report from a contactable physician (patient). A 28-year-old female patient received single dose of BNT162B2 (lot number: EK5730, exp date not reported), via an unspecified route of administration (one injection to left deltoid) on 18Dec2020 07:00 for primary prevention. Medical history included rare bleeding disorder from 2016, and seasonal allergies. She says she had no effects from it but knows of it from genetic testing. Patient did not receive any other vaccines at the same time as this one, or any other medications. Patient was a resident doctor at the hospital and was calling as consumer. She received her first dose of the Pfizer BioNTech COVID-19 vaccine on 18Dec2020 (Friday morning at 07:00AM). She had gotten sort of a whole body generalized rash which the morning of reporting was worse nearer the site and left chest wall area. She says she would like to see if this has happened to and been reported by others. The vaccine was offered by her employer to any staff who wanted to get it, and she was in phase one. She says that there wasn't a specific provider who prescribed it. She has the card that they gave her following the injection and says that it doesn't have an expiration date on it, just the date given and the name of the clinic site. She says it just says Pfizer on this part, on the card. She says on the other form it says Pfizer BioNTech COVID-19 vaccine. She says that there was no dose information provided for the injection. Patient further reported that the rash did have a pretty discreet or distinct area around the injection site up through probably the day before reporting (onset date: Dec2020). It was pretty red, and you could tell the area was swollen at first, and it has faded. She says that the rash the morning of reporting had spread to her left chest wall and breast area, and she was looking at her body in other places and saw the reaction was on the rest of her body too. She says that the rash had maybe a little mild itch, she hadn't noticed if there was anything, just a mild itch, not significant. She didn't do any treatment for the rash specifically, she did take loratadine (CLARTIN) the morning of reporting, but not for that reason, as it was for seasonal allergies, not because of the rash. She provides potential LOT 9HE36498, and says there was no UPC, she got the loratadine and it could have been in original package as one of two, there was no bar code on the label. She provides a second potential LOT 6128ZZYF3, and EXP May2021. She says she was told the injection site may bleed longer, due to rare bleeding disorder, which was the only thing notable. No investigation assessment performed. The patient recovered from site swollen on Dec2020. The outcome of other events was unknown.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911379-1	Fever of 102.4; chills; full body muscle aches; fatigue; nausea; injection site pain; swollen lymph nodes; This is a spontaneous report from a contactable healthcare professional. A 21-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), Batch/lot number: ek5730, intramuscular in the left arm on 21Dec2020 08:45 at single dose for COVID-19 immunization. Medical history included COVID-19 diagnosed prior vaccination. The patient has no known allergies. The patient was not pregnant at the time of vaccination. The patient's concomitant medications were not reported. The patient experienced fever of 102.4, chills, full body muscle aches, fatigue, nausea, injection site pain, and swollen lymph nodes on 21Dec2020 at 19:00. No treatment was given for the events. The vaccine was administered at the hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine and no other medications was received within 2 weeks of vaccination. Since the vaccination, the patient has not been tested for COVID-19. The outcome of the events was not recovered.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911381-1	Severe ear and eye pain; Severe ear and eye pain; This is a spontaneous report received from a contactable nurse. A 51-year-old female patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date not reported), intramuscular in left arm, on 21Dec2020 15:15, at single dose, for COVID-19 immunization. Medical history included hypertension, depression, and known allergies to eggs, latex, nuts and codeine. The patient is not pregnant. Concomitant medication included aspirin (ASPIRIN), ascorbic acid (VITAMIN-C), hydrochlorothiazide, lisinopril (ZESTORETIC), venlafaxine and zinc. The patient previously took codeine and experienced allergy. The patient experienced severe ear and eye pain on 21Dec2020 at 18:30. It was also reported that the patient did not receive any vaccines within 4 weeks prior to BNT162B2. The patient was not diagnosed with COVID-19 prior to vaccination. The patient has not been tested for COVID-19 since vaccination. Treatment included ibuprofen and rest. The outcome of the events was recovering. Information on the Batch/Lot number has been requested.	No current illness for this event.	ASPIRIN [ACETYLSALICYLIC ACID]; VITAMIN-C; ZESTORETIC ;

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911382-1	<p>was up and down all night; Nausea; so out of breath/was having some shortness of breath; feeling bad; low grade fever, with the highest temperature being 99.8 degrees; Abdominal cramping; pooped in her pants/did another poo right after/a little more diarrhea; This is a spontaneous report from two contactable nurses (patient and daughter). A 65-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EH9899, expiry date unknown) intramuscular at right deltoid on 17Dec2020 (10:30) at single dose for COVID-19 immunization. The patient did not have any other vaccines on the same day as receiving the COVID vaccine. Medical history was none. The patient's concomitant medications were not reported. The patient on this past Thursday (17Dec2020), around 10:30 AM, the caller had her COVID vaccine. The patient informed that she lives 20 minutes (address), and on the way home after getting the vaccine that morning, the patient started having abdominal cramping (17Dec2020 17:15) like she needed to go to the bathroom. Due to construction and traffic, she was unable to stop to use the bathroom anywhere and by the time she got home, she had pooped in her pants and when she got inside the house and looked, it looked like a cow patty. The patient got the bathroom and did another poo right after that. The patient that night, she had a little more diarrhea, but then she was okay on Friday and went to work. The patient informed that on Saturday (19Dec2020), after lunch, she started feeling bad and was having diarrhea again, but it was sporadic. The patient informed that yesterday (21Dec2020) afternoon, she got diarrhea again. The patient informed that last night (20Dec2020) she was up and down all night, and also had associated nausea and a low grade fever, with the highest temperature being 99.8 degrees. The patient's daughter informed that the low grade fever started Saturday (19Dec2020) and was on Saturday and Sunday evenings, but daughter informed that the patient has not had fever this morning so far. The patient did not go to work today (21Dec2020). The patient informed that over the weekend (20Dec2020), she had gotten a ham into her daughter's (nurse too) refrigerator, and the daughter asked the patient why she was so out of breath. The patient informed that she was having some shortness of breath as well. The patient would say it was not ongoing but she also was still in bed at this time so she was unsure. The reporter informed that the patient was not specifically prescribed the vaccine, but was given the product as part of a hospital policy. The patient did provide her Primary Care's name and phone number but did not have address or email address to provide at this time. The outcome of the events abdominal cramping was recovering, pooped in her pants/did another poo right after/a little more diarrhea and Nausea was not recovered, feeling bad, was up and down all night, so out of breath/was having some shortness of breath was unknown, low grade fever, with the highest temperature being 99.8 degrees was recovered on Dec2020.</p>	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911383-1	<p>sore throat before she got the shot, but it made it worse; sore throat before she got the shot, but it made it worse; Body aches; She couldn't swallow; This is a spontaneous report from a non-contactable consumer (patient's coworker). A female patient of an unspecified age received bnt162b2 (BNT162B2, lot no. and expiry date were not reported), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient medical history included sore throat. The patient's concomitant medications were not reported. The patient got the shot on Tuesday and on Thursday (unspecified date) she got sore throat and body aches. She gargled with salt water and drank tea and felt better the next day. It was clarified that the patient had the sore throat before she got the shot, but it made it worse. She said she couldn't swallow. The outcome of the events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.</p>	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911384-1	<p>she felt a little more local soreness than she did with the regular seasonal influenza shot; This is a spontaneous report from a non-contactable consumer (patient's husband). A female patient in her mid 30s received her first BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine), via an unspecified route of administration on 20Dec2020 at a single dose for COVID-19 immunization. The patient's medical history was not reported. The patient's concomitant medications were not reported. The patient noted that she felt a little more local soreness than she did with the regular seasonal influenza shot on an unknown date in Dec2020. The outcome of the event was unknown. No follow-up attempts are possible, information about lot/batch cannot be obtained. No further information is expected.</p>	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911385-1	<p>"hot flash; itchy throat; This is a spontaneous report from a non-contactable pharmacist. A female patient of an unspecified age received first dose of BNT162B2 (COVID-19 mRNA Vaccine BNT162B2), via an unspecified route of administration on an unspecified date at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced a ""hot flash"" 5 minutes after COVID-19 vaccination and then ""itchy throat"" 30 minutes after vaccination on an unspecified date. They would liked to know if patient should receive the second dose. She is otherwise fine with all symptoms resolved and never had respiratory distress of any kind. The outcome of the events was recovered on an unknown date. No follow-up attempts are possible; information about lot/batch number cannot be obtained."</p>	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911386-1	<p>she felt dizzy; This is a spontaneous report from a contactable Nurse (patient). A 50-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), on unknown date via unknown route of administration at unknown dose for unknown indication. Medical history and concomitant medications were not reported. Patient received the COVID vaccine. Later in the day she felt dizzy. The outcome of the event was unknown. Information on the lot/batch number has been requested.</p>	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911387-1	"Pain in upper two shoulders and neck/upper body joint pain, both sides; Generalized weakness; Pain in upper two shoulders and neck; This is a spontaneous report from a contactable physician reporting for herself. This 63-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot/batch number not provided) on the morning of 20Dec2020, intramuscularly in the left arm at a single dose, for COVID-19 immunization. The patient's medical history included arthritis, esophagitis and esophageal ulcer, from unspecified date and unspecified if ongoing. The patient's concomitant medications were not reported. On 20Dec2020, the patient (physician) called to report two side effects: pain in upper two shoulders and neck, generalized weakness. She developed an upper body joint pain, both sides. She got the injection on the left but both her shoulders had joint pain and weakness. She did not receive treatment for the events. She had the COVID test on 19Dec2020 or 18Dec2020 (reported as ""yesterday"" and ""2 days ago"" but the results were not back as of 20Dec2020. The outcome of the events was unknown. The reporter assessed the events as related to the vaccine. Information on the lot/batch number has been requested."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911388-1	Facial swelling; Low grade fever around a 100; Got my eye supposedly my eye lids like little swelling and they looks like they are bruised and they itch like crazy; Got my eye supposedly my eye lids like little swelling and they looks like they are bruised and they itch like crazy; I have swelling in both of my eyes; It is getting pretty bad actually, it has got worse; This is a spontaneous report from a contactable nurse (reporting for herself). A 41-year-old female patient received bnt162b2 (BNT162B2 also reported as Covid vaccine by Pfizer, lot EJI685), via an unspecified route of administration on 17Dec2020 at single dose for immunisation. Medical history included depression and anxiety. The patient's concomitant medications were not reported. The patient got the COVID vaccine on Thursday of last week (17Dec2020) and had low grade fever around a 100. On Friday (18Dec2020) she started getting little bit of facial swelling not a whole bunch. After the weekend, her eye lids had little swelling and they look like they were bruised and they itch like crazy. She does not have any drainage like conjunctivitis or anything like that but it looks like she have swelling in both of my eyes and that doesn't happens to her. She does not have any but was probably going in today because it was getting pretty bad actually, it has got worse. The outcome of events was not recovered.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911389-1	Headache- lasted 12 hours; 24hrs after injection Tachycardia at rest (hr 106); chest pain; flushing/feeling very warm; flushing/feeling very warm; elevated BP 136/96; This is a spontaneous report from a contactable Nurse reporting for himself. A 52-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: E49899), intramuscular on 17Dec2020 10:45 AM at single dose for covid-19 immunization. Vaccine location was Right arm and it was the first dose. The COVID-19 vaccine was administered at Hospital. Medical history included mild coronary artery disease (CAD), Migraine, Psoriasis, and allergy to Sulfa Medications. Concomitant medication included atorvastatin (LIPITOR), finasteride, cetirizine hydrochloride (ZYRTEC), aspirin, melatonin, biotin, zinc, ergocalciferol (VIT D), ascorbic acid (VIT C), ubidecarenone (COQ10), fremezumab (AJOVY), and adalimumab (HUMIRA). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced headache- lasted 12 hours, 24hrs after injection tachycardia at rest (heart rate (HR) 106), chest pain, flushing/feeling very warm, elevated blood pressure (BP) 136/96 on 18Dec2020 10:30. Symptoms lasted for about 2 hours. No treatment received for the events. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient was not been tested for COVID-19. The outcome of the event headache was recovered on 18Dec2020 22:30 (lasted 12 hours), the outcome of the other events tachycardia at rest (heart rate (HR) 106), chest pain, flushing/feeling very warm, elevated blood pressure (BP) 136/96 was recovered on 18Dec2020 (lasted about 2 hours).	No current illness for this event.	LIPITOR [ATORVASTATIN]; ZYRTEC [CETIRIZINE HYDROCHLORIDE]; ASPIRIN [ACETYLSALICYLIC ACID]; ; VIT D; VIT C; COQ10 [UBIDECARENONE]; AJOVY [FREMANEZUMAB]; HUMIRA
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911390-1	Severe rigors and fevers; Severe rigors and fevers; other vaccine same date product; other vaccine same date product; This is a spontaneous report from a contactable physician (patient). An adult male patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in arm left on 21Dec2020 08:00 at single dose for COVID-19 immunisation. Facility where the most recent COVID-19 vaccine was administered was hospital. Medical history included covid (if Covid prior vaccination: Yes/Prior to vaccination, was the patient diagnosed with COVID-19?: Yes). No allergies to medications, food, or other products. Concomitant medications the patient received within 2 weeks of vaccination included gabapentin (NEURONTIN), ibuprofen (MOTRIN), other vaccine same date product=Pfizer, other vaccine same date vaccine location was left arm. The patient experienced severe rigors and fevers on 22Dec2020 02:00. The patient not received any other vaccines within 4 weeks prior to the COVID vaccine. Since the vaccination, the patient has not been tested for COVID-19. Therapeutic measures were taken as a result of severe rigors and fevers (Tylenol). This case was non-serious. The outcome of events severe rigors and fevers was not recovered. The outcome of other events was unknown. Information on the lot/batch number has been requested.	No current illness for this event.	NEURONTIN; MOTRIN [IBUPROFEN]

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911391-1	I had severe body rigors/Chills; I threw up; I had a 101.8 fever; I was pretty much out all day yesterday, like I was out sleeping with a fever; pretty much out; This is a spontaneous report from a contactable Nurse. A 59-year-old female patient started to receive first dose of BNT162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number: EJ1685, Expiry Date: 31Mar2021) intramuscular on 19Dec2020 at 0.3 mL, single for covid-19 immunization from her work. Patient history was reported as no. The patient didn't have really anything. Concomitant medication included paracetamol (TYLENOL), the patient had been taking some Tylenol. The patient had a vaccination Saturday morning on 19Dec2020 and had a very bad reaction during the night. The patient had severe body rigors and chills. She threw up. She had a 101.8 fever. She was pretty much out all day yesterday, like was out sleeping with a fever. Investigation assessment was no. The patient just would like to know if she can get the second injection. Outcome of the events was unknown. The events were considered as related by the reporter via global introspection (Method of assessment).	No current illness for this event.	TYLENOL
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911392-1	anaphylactic reaction; This is a spontaneous report from a contactable physician via a sales representative. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number and expiration date not provided), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced an anaphylactic reaction 8 hours after receiving the Covid-19 vaccine. The outcome of the event was unknown. Information about Batch/Lot number has been requested.; Sender's Comments: Based on the compatible temporal association and the drug's known safety profile, the Company considers the anaphylactic reaction is possibly related to BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) vaccination. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911393-1	"Runny nose; Headache; Joint pain I guess kind of, small moderate pain; Really had sore throat; This is a spontaneous report from a contactable consumer (patient). A 31-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EKS730), intramuscular on 17Dec2020 at single dose for COVID-19 immunization at hospital. The patient's medical history included seasonal allergy (Seasonal allergies he guess, that's it). Concomitant medications were not reported. The patient previously took cetirizine hydrochloride (ZYRTEC) from an unspecified date to Sep2020, not currently, he had not been taken it since summer but he had not currently taken it, he have stopped taking it, three months before the vaccine. The patient was a paramedic (further not clarified) and received the vaccination at a hospital, not a pharmacy. Patient guessed that they vaccinated there whole front line staff. The patient got the vaccine on Thursday (17Dec2020). Pfizer vaccine. Covid 19 vaccine and he was just having side effects mostly sore throat, he was having a really bad sore throat and he was expecting. He knew they said fever, chills, headache, joint pain was normal and things like that they are normal. But he just wasn't sure of this sore throat part of it and was also wondering if he was able to take like, anything to help with the symptoms. He also had other symptoms, on 20Dec2020 (started yesterday by the time of reporting), he experienced runny nose, headache, ""joint pain he guessed kind of, small moderate pain"" and really had sore throat. As a treatment to the events, he took DayQuil on 20Dec2020 and was not sure what that dosage was. The events were quite persisting, which started yesterday. The patient had general lab work of Cholesterol on date that he didn't remember and did not know the result of it. The outcome of the events was not recovered."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911394-1	Pain at injection site; Tachycardia like 120 heart rate; Dizziness; Fatigue; Fever; Stressing; Threw up; This is a spontaneous report from a contactable Other healthcare professional (Nurse Practitioner, also the patient). A 32-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection, lot number: EK5730), intramuscularly on 20Dec2020 at single dose on right deltoid for COVID-19 immunization. Medical history reported as none. There were no concomitant medications. The patient experienced tachycardia, dizziness, fatigue, fever, stressing, threw up on an unspecified date in Dec2020, and pain at injection site on 20Dec2020. The patient received Covid vaccine yesterday on 20Dec2020 and he woke up and he threw up twice and he have fever 102 and tachycardia like 120 heart rate and some dizziness and he took some Tylenol (taken as treatment) and just drinking water. Feeling a little better right now. Tylenol was taken this morning as a treatment for fever of 102. For Causality, consumer stated, he believed so, because like he hasn't been around, he obviously worked around people who were sick, but he was fully gown and fully PPE. He was fine until this morning. Last night the only symptom he was having was pain at injection site which was expected. Of course, he can expect a low grade fever or maybe just some fatigue, he thought he was just stressing, he had fever went to 102 and he developed tachycardia and dizziness which was getting better after medicine and drinking fluid. Therapeutic measures were taken as a result of tachycardia, dizziness, fever. The outcome of the events tachycardia, dizziness, fever was recovering, the outcome of the other events was unknown.	No current illness for this event.	No other medications for this event.

I stayed for one hour, it began to feel like a cold sensation. I was able to walk and did not f; anxiety; This is a spontaneous report from a contactable nurse (patient). A 32-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number EK5730), intramuscularly on 15Dec2020 07:45 at single dose for covid-19 immunization. Vaccine location was left arm and it was the first dose. None medical history. No known allergies. Patient was not diagnosed with COVID-19 prior to vaccination nor tested for COVID-19 since the vaccination. There were no concomitant medications. The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine nor received any other medications within 2 weeks of vaccination. At 22Dec2020 07:45 am, the patient experienced slight heaviness and then a tingling parasthesia in the feet that traveled up to her knees. She stayed for one hour, it began to feel like a cold sensation. She was able to walk and did not feel dizzy and left work. The patient reported them to the MD who said it could be a coincidence and anxiety. Patient didn't receive any treatment for the adverse events. The action taken in response to the events for BNT162B2 was not applicable. The outcome of events was unknown. The events were non-serious.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911411-1	had a sudden lightheadedness/a bit lightheaded; slurred speech; extreme sleepiness; feeling like was under anesthesia and unable to move the legs; unable to move the legs; Blood pressure dropped to 80/60mmHg and pulse was at 50; Blood pressure dropped to 80/60mmHg and pulse was at 50; This is a spontaneous report from a contactable pharmacist. A patient of unspecified age and gender received a dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization in their facility. The patient's medical history and concomitant medications were not reported. It was reported that patient (doctor) in their facility received the vaccine and had a sudden lightheadedness, slurred speech and extreme sleepiness. Feeling like was under anesthesia and unable to move the legs. Blood pressure dropped to 80/60 mmHg and pulse was at 50. The episode lasted 2h and then became alert but a bit lightheaded and was normal next day. The outcome of the events was recovered. Information on the lot/batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911413-1	migraine; Vomiting; low grade fever and headache; headache; chills; light sensitivity; This is a spontaneous report from a contactable Nurse (patient). A 54-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via an unspecified route of administration on 18Dec2020 around 07:45 at single dose for COVID-19 immunization. Anatomical location of administration provided as left upper arm; deltoid. Medical history included migraines (Hasn't had one in a while). There were no concomitant medications. There were no prior vaccinations within 4 weeks. The patient previously took FLU VACCINE and had a low grade fever. The patient experienced low grade fever and chills on 19Dec2020, Headache with Light sensitivity: Woke up in the night with the headache after going to bed on Saturday, 19Dec2020. The patient has been vomiting off and on since Sunday, 20Dec2020. Caller stated she got the vaccine on Friday the 18Dec2020 and now has a low grade fever and headache and asked if she can take Tylenol or Ibuprofen for her symptoms. She also asked if she is allowed to take these before her next dose. Caller asked since she was experiencing symptoms with first dose is it likely she will experience them for second dose or it would be worse. Specifically, it was reported that late Saturday, the patient started running a fever and chills between 4PM and 5PM on 19Dec2020. She knew it was a potential side effect and minor. Got a headache since then and with light sensitivity. She wasn't sure what she could do to break it. Turned into a migraine on an unspecified date and has had vomiting. Vomiting occurs with her migraines, but hasn't had a migraine in a long time. The patient wasn't sure if she could take Ibuprofen or Tylenol with the vaccine. The light fever and chills is listed on the potential side effects she received. She can't focus with the headache she has. Called in to work. The patient knew COVID Vaccine could cause headaches. Think the headache started and ballooned into a migraine. Has been vomiting off and on since Sunday, 20Dec2020. Thinks the vomiting is from the headache and not the vaccine. Not due for next dose of COVID Vaccine until 08Jan2021. Wants to know if she is likely to experience the same symptoms with the second dose. Or if the symptoms will worsen. The outcome of the events was unknown. The seriousness provided as between not serious and medically significant. The causality assessment for events fever and chills, headache with light sensitivity with suspect vaccine provided as Related by Primary Source Reporter via Method of assessment Global Introspection.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911414-1	Joint pain and swelling 3 days after the first dose. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911421-1	"congestion; throat hurts, she has a sore throat; a sore arm where it was administered. It is not swollen or red but hurts to the touch; diarrhea and has gotten a little worse since starting/having to get up and go to the bathroom often; uncomfortable; This is a spontaneous report from a contactable consumer (patient). A 25-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number unknown because the patient was sent a picture of the paper provided for vaccine administration but it did not include any product details), via an unspecified route of administration at arm on 21Dec2020 at single dose for COVID-19 immunization at hospital. The patient's medical history included seasonal allergy, she had no allergies other than season allergies. She had no reactions to any vaccines previously. Prior Vaccinations within 4 weeks was reported as none, and no events following prior vaccinations. Concomitant medications included unspecified medication for birth control daily and has been on this for a couple months. No additional vaccines administered on same date of the Pfizer suspect. The patient is a medical assistant, an employee at a hospital. She received the vaccine at work yesterday (21Dec2020) around 10 or 10:30 and she was having side effects. She had contacted her employer but wanted to know if it is ok to go to work or should she stay home and treat the symptoms. Afterward she experienced diarrhea which started last night and has gotten a little worse since starting. She also has congestion and her throat hurts, she has a sore throat, that started this morning, on 22Dec2020. There had been no treatment for above symptoms. After getting the shot she had a sore arm where it was administered. It is not swollen or red but hurts to the touch. This started 30 minutes after administration and she had to take pain medication. It was worse on 22Dec2020 (today). She did not require a visit to the doctor at the point when reporting, it was just uncomfortable having to get up and go to the bathroom often. No emergency room or physician visit due to the event. No relevant tests. The outcome of the event ""uncomfortable"" was unknown, and for the rest of events was not recovered. Information on the lot/batch number has been requested."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911422-1	Increased heart rate; Increased heart rate and blood pressure; Feeling hot; Cold fingers; This is a spontaneous report from a contactable nurse (patient). A 48-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE lot/batch number EH9899), intramuscular on the left arm on 22Dec2020 08:00 at SINGLE DOSE as COVID-19 immunization at the workplace clinic. The patient had no medical history and no allergies to medications, food, or other products. The patient previously had COVID-19 test on 24Aug2020 and showed negative. Concomitant medication included levothyroxine (LEVOTHYROXINE). On 22Dec2020 08:00, the patient experienced increased heart rate and blood pressure, feeling hot and cold. Since the vaccination, the patient had been tested for COVID-19 in Dec2020 with unknown results. The patient did not receive any treatments for the events. The patient was recovering from the events.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911423-1	tingling in hands and feet; This is a spontaneous report from a non-contactable other healthcare professional. A 48-year-old female patient receives first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: HE9899). Intramuscularly on 18Dec2020 12:45 at single dose for immunization, vaccine location provided as Right arm. Medical history included fibromyalgia, rheumatoid arthritis. The patient's concomitant medications were not reported. No history of vaccine or medication reaction previously. During her 15-minute waiting period after the injection, the patient began to experience tingling in hands and feet on 18Dec2020. She denied rash, hives, difficulty breathing, difficulty swallowing, wheezing, throat tightness, hoarseness, lightheadedness, dizziness and tongue swelling This provider was notified of patient reaction and she was then assessed in the emergency bay area. Review of Systems included: Constitutional: Negative for chills and fatigue. HENT: Negative for congestion, facial swelling, rhinorrhea, sinus pain, sneezing, sore throat and trouble swallowing. Respiratory: Negative for cough and shortness of breath. Musculoskeletal: Negative for back pain, myalgias and neck stiffness. Skin: Negative for rash. Neurological: Tingling in hands and feet bilaterally. The outcome of the event was unknown. All events reported as non-serious. No follow-up attempts are possible. No further information is expected.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911424-1	"Feeling under the weather; Nausea; Headache; Muscle ache; This is a spontaneous report from a contactable other healthcare professional (HCP), who is also the patient. This 63-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number EL0140) via an unspecified route of administration on 19Dec2020 at single dose for COVID-19 immunisation. Relevant medical history included hypertension (hypertensive for years and takes medication for that), muscle aches (she got muscle aches once in a while) and headaches (she got some headaches from wearing a mask). Concomitant medications included unspecified drugs for hypertension. On 21Dec2020, the patient experienced nausea; in Dec2020 she experienced headache and muscle ache and on 22Dec2020 she experienced feeling under the weather. The patient specified that she has had light symptoms of nausea, headache, and muscle ache. Nausea was the most prevalent symptom. She said she got some headaches from wearing a mask, and the headaches she has experienced since receiving the COVID-19 Vaccine could be related to her mask wearing, and not the vaccine. She said she was at the age where muscle aches are not uncommon, and she got muscle aches once in a while, so she was unsure if her muscle aches were from receiving the COVID-19 Vaccine. She further specified that the she had a little nausea, saying the nausea was not very noticeable. The nausea was a little heavier at the time of the report, and she had some toast and some things to help settle her stomach. She said she was feeling ""blah."" She clarified she was feeling under the weather, like she just wanted to get in bed and sleep. The patient reported that the symptoms she was experiencing could be stress, and she just wanted to get the rapid COVID test to make sure she doesn't have the virus. She would take the rapid test as a requirement for travel. Treatment: the patient took 2 Extra Strength Tylenol 500mg (Lot Number: SHA086, and Expiration Date: Jun2024). The patient had not recovered from nausea and feeling unwell; the outcome of the headache and muscle ache was unknown."	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911485-1	"basically thought she had COVID all over again; basically thought she had COVID all over again; Pain at the injection site; Joint pain; Feeling unwell; This is a spontaneous report from a contactable physician (patient). A 45-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EKS730), via an unspecified route of administration on an unspecified date in Dec2020 at single dose for COVID-19 immunization. Medical history included COVID a month ago in 2020. There were no concomitant medications. The patient experienced pain at the injection site, headache, myalgia, joint pain, chills, nausea, feeling unwell, fatigue in Dec2020. The patient basically thought she had COVID all over again. The patient stated, "I was calling because I just had the COVID vaccine which has caused so many adverse reactions which is the side effects? I am experiencing all the side effects but it is calming down because today is day three. Pain at the injection site, headache, myalgia, joint pain, fatigue, chills, nausea, feeling unwell. Basically I had COVID a month ago and I had vaccine three days ago (Dec2020) and I basically thought I have COVID all over again. I took the vaccine on Friday started with the symptoms pretty much on Saturday." The patient received ibuprofen (ADVL) as treatment. The outcome of events was unknown. The physician assessed events pain at the injection site, headache, myalgia, chills, nausea, feeling unwell, fatigue was related with vaccine; Sender's Comments: Based on the information currently available, a lack of efficacy with BNT162B2 in this patient cannot be completely excluded."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911526-1	Swelling reported around mouth and eyes; Swelling reported around mouth and eyes; rash; This is a spontaneous report from a contactable consumer (patient). A female patient of an unspecified age received bnt162b2 (Pfizer-BIONTECH COVID-19 vaccine), via an unspecified route of administration on 22Dec2020 16:30 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient previously took doxycycline in 2019 and experienced swelling reported around mouth and eyes and rash. On an unspecified date in Dec2020, the patient experienced swelling reported around mouth and eyes and rash. The outcome of the events was unknown. Information on the lot/Batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911542-1	Fatigue x 3 days, SOB x 4 days (history of asthma; used inhaler multiple time daily). Headache- motrin/Tylenol x 7 days. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911551-1	Dizziness, itching of entire arm for days, migraine and nausea, sore muscles and fatigue for days, sinus pressure and pain, small rash at site	None	None
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911552-1	Started with lower back pain in the morning when I woke up. Then my back and hamstring muscles tighten up. All that went away as the day went on. Just a lingering discomfort remained. That night I was awoken by 10/10 dull pain in both my hips. I don't have arthritis, but I imagine that is what the pain must feel like. That eventually subsided over the course of the night and then the following morning I woke up with a stronger lower back pain and major stiffness in my hamstrings, but the hip pain was gone. Throughout the day the pain would come and go and move up and down my back and along my spine. It was the strongest on the night of the 22 and has since gotten weaker and the tightens in my back and hamstrings has since left. Now I just get random aches throughout my back that come and go during the day. Yesterday, the 27th, I was hiking down a hill and the impact from that caused instant discomfort in my spine, it felt like it was compressing like an accordion. Never had this happen before. After that my back was sore for hours. Today, the 28th, I tried jogging and the spinal discomfort was instantly there. Went about thirty yards before I stopped and my back has been aching down my spine for hours. Also been experiencing a couple mild headaches through the day since the 22nd. This also has fired up the endothelial dysfunction in my heart which causes some strong chest pain throughout the day. I've gone back in my heart medication, so hopefully that will fix that issue. I will be contacting my cardiologist in regards to this and seeing if the vaccine can affect that.	No	None

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	911919-1	heart rate of 40; dizzy; really tired; This is a spontaneous report from a non-contactable consumer (patient's friend). A male patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date were not reported), via an unspecified route of administration on 16Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient was having some symptoms that wanted to check out. On Dec2020, he was really dizzy, he was really tired, and he had a heart rate of 40. No questions, they just want to make sure that he was not going to die. Outcome of the events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	912057-1	Her BP went down to 80/60 with a pulse of 50; sudden light headedness/light headedness; pulse of 50; Slurred speech; extreme sleepiness/sleepiness that there was no other focal deficit; felt like she was under anesthesia, was unable to move her legs/felt like she was under general anesthesia trying to wake up but unable to open her eyes or move her arms or legs; This is a spontaneous report from a contactable pharmacist. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number and expiration date were not reported, via an unspecified route of administration on unspecified date at a single dose for immunization. Medical history was none. The patient's concomitant medications were not reported. It was reported that the patient (a doctor) received the vaccine and had a sudden light headedness, slurred speech, and extreme sleepiness with outcome of recovered. She felt like she was under anesthesia, and was unable to move her legs. Her BP went down to 80/60 with a pulse of 50. All of these episode lasted about 2 hours. The patient became alert, but she still felt a bit light headed. She felt normal the next day. The patient said that at the sudden onset of the side effects: light headedness, slurred speech, and sleepiness that there was no other focal deficit. She felt like she was under general anesthesia trying to wake up but unable to open her eyes or move her arms or legs. The outcome of the events Her BP went down to 80/60 with a pulse of 50, sudden light headedness/light headedness, Slurred speech, extreme sleepiness/sleepiness that there was no other focal deficit and felt like she was under anesthesia, was unable to move her legs/felt like she was under general anesthesia trying to wake up but unable to open her eyes or move her arms or legs was recovered on an unknown date. Information about lot/batch number has been requested.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of low blood pressure/ low pulse with dizziness cannot be excluded, considering the plausible temporal relationship. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	912058-1	Midbottom of foot to toes is completely numb; tingling in toes of both feet; paresthesias (numbness, tingling) right arm; paresthesias (numbness, tingling) right arm; This is a spontaneous report from a contactable nurse practitioner, the patient, A 56-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EK5730), intramuscular in the left arm on 18Dec2020 (at the age of 56-years-old) as a single dose for COVID-19 immunization. The patient did not have any relevant medical history. Ongoing concomitant medications included levodroxyline sodium (SYNTHROID) and unspecified vitamins. On 18Dec2020, the patient experienced paresthesia (numbness, tingling) in right arm. On 19Dec2020, the patient had tingling in the toes of both feet. On 21Dec2020, the mid bottom of foot to toes was completely numb. The clinical course was as follows: The patient received the vaccine in the left arm on 18Dec2020 and 9 hours later, she had paresthesias (tingling/numbness) in right arm. It was stemming from her shoulder down her arm. Around mid-morning on 19Dec2020, she had started having tingling in the toes of both feet. On 21Dec2020, the mid bottom of foot to toes was completely numb. The patient reported that the paresthesias (tingling/numbness) in right arm was getting better and was more intermittent and the tingling in the toes was only in the left foot as of 22Dec2020. The clinical outcome of the paresthesia (numbness/tingling) in the right arm was recovering; while that of the numbness in mid foot to toes and tingling in the toes were not recovered. The reporter assessed the events as serious for being medically significant and assessed the events as related to the suspect vaccine.; Sender's Comments: The Company cannot completely exclude the possible causality between the reported paresthesia (numbness, tingling) in right arm, tingling in the toes of both feet, the mid bottom of foot to toes was completely numb, and the administration of the BNT162B2 for COVID-19 immunization, based on the plausible temporal association. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified, as appropriate.	No current illness for this event.	SYNTHROID

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	912061-1	chills all night and syncope; chills all night and syncope; This is a spontaneous report from a contactable other health professional (patient). A 39-year-old male patient received the first dose of the bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number and Expiration Date: Unknown), intramuscularly in the left arm (also reported as the right arm) on 22Dec2020 at 15:00 at 39-years-old at a single dose for COVID-19 immunization. The facility where the most recent COVID-19 vaccine was administered was reported as: other. Medical history included Penicillin allergy from an unknown date and unknown if ongoing. Concomitant medications included estrogens conjugated (PREMARIN), progesterone (MANUFACTURER UNKNOWN), estradiol (MANUFACTURER UNKNOWN), montelukast (MANUFACTURER UNKNOWN); all taken for an unspecified indication from an unspecified date to an unspecified date (all of which were received within two weeks of vaccination). The patient did not receive any other vaccines within four weeks prior to the COVID vaccine. On 23Dec2020 at 00:00, the patient experienced: chills all night and syncope. The event syncope was considered medically significant; and the event chills was non-serious. There was no treatment received due to the adverse events. It was reported that prior to vaccination, the patient was not diagnosed with COVID-19; and since the vaccination, the patient had not been tested for COVID-19. The clinical outcome of the events, chills all night and syncope, was recovering. The batch/lot numbers for the vaccine, bnt162b2, were not provided and will be requested during follow up.; Sender's Comments: Based on temporal association, a possible contributory role of suspect BNT162B2 vaccine cannot be excluded for reported event syncope. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	PREMARIN; ; ;

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	912062-1	<p>"vomiting; nausea/felt like she was going to vomit; headache/bad headache was reported as worsened; arm and joint pain in injection arm/Joint pain; arm and joint pain in injection arm; arm and joint pain, mostly in the left arm where she received the COVID vaccine/left arm pain at injection site; had a history of a pain conditions in her back/ but got worse after the shot"; This is a spontaneous report from a contactable nurse (reported for herself). A 26-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 22Dec2020 11:30 at single dose at arm for COVID-19 immunization. Medical history included complex regional pain syndrome from Dec2019 and ongoing, back pain ongoing. Concomitant medications included naproxen sodium (ALEVE) ongoing, duloxetine hydrochloride (CYMBALTA) from 20Dec2020 and ongoing. Caller wanted to know if she should receive the second dose of the Covid vaccine. She received the vaccine yesterday (22Dec2020) at 11:30 (11:30 a.m.) by 21:30 (9:30 p.m.) she was experiencing side effects of vomiting, nausea, headache, arm and joint pain in injection arm, and continued to feel as if she was going to throw up. HCP was called to get Zofran prescribed. Caller further reported that she got the COVID Vaccine yesterday, 22Dec2020, at 11:30 (11:30am). At 21:30 (9:30 pm) last night (22Dec2020), she started vomiting and has had nausea since that time. Caller also stated that she had a really bad headache. Caller stated that she also had arm and joint pain, mostly in the left arm where she received the COVID vaccine. She went to sleep at 8:30 last night and woke up vomiting at 9:30pm and then had had nausea and a headache since then. If she tried to get up, she felt like she was going to vomit. She had a history of a pain conditions in her back and ""let"" (as reported, pending clarification). Stated that she cannot say that this was entirely due to the shot, but got worse after the shot (Dec2020). Caller reported that last night, she took Zofran which help the vomiting. The vomiting stopped around 3 o'clock this morning (23Dec2020 03:00), but she was still having nausea that made her feel like she was going to throw up. She could not stop vomiting for a few hours during the night. Caller asked how she know if she should be taking the 2nd dose of the COVID vaccine. Events Vomiting, Nausea, bad headache, left arm pain at injection site, Joint pain all reported as started from 22Dec2020 (21:30). Patient recovered from vomiting with lasting effects of nausea which made her feel like she was going to vomit, started on 23Dec2020. Reporter seriousness for Vomiting, Nausea, bad headache was Medically significant and bad headache was reported as worsened. Reporter seriousness for left arm pain at injection site and Joint pain was not serious. No Investigation Assessment. The reporter considered events Vomiting, Nausea, bad headache, left arm pain at injection site, Joint pain were related to the suspect product. The outcome of the event vomiting was recovered on 23Dec2020 03:00. The outcome of ""had a history of a pain conditions in her back/ but got worse after the shot"" was unknown. The outcome of the other events was not recovered.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the vomiting, nausea, headache and other reported events due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."</p>	Back pain; Complex regional pain syndrome	ALEVE; CYMBALTA
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	912064-1	<p>had a patient receive COVID vaccine and 3 days later developed bilateral pulmonary embolisms; This is a spontaneous report from a contactable physician. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at single dose on an unspecified date for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. The physician had a patient receive COVID vaccine and 3 days later developed bilateral pulmonary embolisms on an unspecified date with outcome of unknown. Have there been any similar reports of such events within short time frame of receiving the vaccine? Information about lot/batch number has been requested.; Sender's Comments: The information provided is limited and doesnot allow a full medically meaningful assessment. This case will be reassessed should additional information, especially patient age, relevant medical history, concomitant drugs and clinical course, become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	912066-1	Exaggerated immune response and rigors; Exaggerated immune response and rigors; Fever and night sweats; Fever and night sweats; Sustained tachycardia between 100-105; This is a spontaneous report from a Pfizer sponsored program. A contactable 31-year-old male physician reported that he received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number EH9899) via an unspecified route of administration in the right deltoid on 19Dec2020 at 10:30 at single dose for COVID-19 immunisation. Vaccination facility type: hospital. Relevant medical history included COVID-19 (recently had COVID prior to receiving the COVID-19 Vaccine). There were no concomitant medications. Five minutes after the COVID-19 Vaccine, on 19Dec2020, the patient experienced sustained tachycardia between 100-105 that lasted about 40 minutes and then dissipated by itself; the patient recovered from tachycardia on 19Dec2020. Early morning on 20Dec2020 at 03:30, he had an exaggerated immune response and rigors, which lasted about 30minutes to 40minutes, followed by fever and night sweats, which continued for 30 minutes and then it was all over. Reactions were spontaneously over. The patient recovered from the events exaggerated immune response and rigors, fever and night sweats on 20Dec2020. The physician believed that it was a hyper immune response. Recently, he had COVID prior to receiving the COVID-19 Vaccine and he wanted to know whether he should have waited after experiencing COVID to have received the first dosage of the COVID-19 Vaccine. The physician considered the reported events related to the COVID-19 Vaccine.; Sender's Comments: Based on available information, a possible contributory role of the subject product cannot be excluded for the tachycardia and other reported events due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including EKG at baseline and during subject drug therapy, echocardiogram, electrolytes, chemistry panel, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	912067-1	patient's anaphylactic reaction persisted longer than expected; This is a spontaneous report from a contactable pharmacist. A 45-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration in Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient's anaphylactic reaction persisted longer than expected in Dec2020. The outcome of the event was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up.; Sender's Comments: The causal relationship between BNT162B2 and the event anaphylactic reaction cannot be excluded as the information available in this report is limited and does not allow a medically meaningful assessment. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	912069-1	tunnel vision; Shortness of breath; headache; couldn't move arms/legs; This is a spontaneous report from a contactable other health professional via a Pfizer sales representative. A patient of unspecified age and gender received bnt162b2 (BNT162B2), via an unspecified route of administration, on an unspecified date, at single dose, for Covid-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient experienced tunnel vision, shortness of breath, headache and couldn't move arms/legs all on an unspecified date with outcome of unknown. The information on the lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of tunnel vision, shortness of breath, headache and couldn't move arms/legs due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including eye examination at baseline and during subject drug therapy, Head CT/MRI, chemistry panel and chest x-ray . counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	912203-1	Was exposed to someone positive and then 2 days later tested positive; Was exposed to someone positive and then 2 days later tested positive; This is a spontaneous report from a contactable pharmacist. A male patient of an unspecified age received the first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine), via an unspecified route of administration in Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received the first COVID-19 vaccine last week in Dec2020, then was exposed to someone positive and then 2 days later, tested positive. Reporter inquired whether they can vaccinate patient on schedule 3 weeks after the first dose or if they have to wait 90 days. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	912215-1	diagnosed with COVID-19; diagnosed with COVID-19; This is a spontaneous report from a contactable physician, the patient. A male patient of an unspecified age received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), via an unspecified route of administration on 21Dec2020 as single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On 22Dec2020, the patient was diagnosed with COVID-19. The clinical outcome of diagnosed with COVID-19 was unknown. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.; Sender's Comments: The patient was diagnosed with COVID-19 one day after he received vaccination with BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE). There was not a reasonable possibility that the event was related to vaccination considering the temporal gap between the vaccination and the event onset.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	912230-1	now COVID positive with symptoms; now COVID positive with symptoms; This is a spontaneous report from a contactable consumer(patient). A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 16Dec2020 at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient received the vaccine on 16Dec2020 and now COVID positive with symptoms as of 19Dec2020. The patient asked that should he (she) still get the second vaccine. The outcome of event was unknown. Information on lot/batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	912242-1	"positive COVID-19 test with symptoms; positive COVID-19 test with symptoms; This is a spontaneous report from a contactable physician (patient). A male patient of an unspecified age received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced tested positive for COVID in Dec2020. The patient got the first dose of the vaccine on the day before the date of this report, started coughing on the day before the date of this report and tested positive for COVID on the date of this report. Caller requested guidance regarding whether he should receive the second vaccine dose, specifically will it be effective. Caller stated that he was "an ER doc" and understand that he did not get COVID from the vaccine. The patient underwent lab tests and procedures which included tested positive for COVID in Dec2020. The outcome of events was unknown. Information about lot/batch number has been requested.; Sender's Comments: Considering the temporal gap between the vaccination and the event onset, there was not a reasonable possibility that the COVID-19 infection was related to vaccination with BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE)."	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	912338-1	Headache; soreness to the injection site; This is a spontaneous report from a contactable nurse. A 55-year-old female non-pregnant patient received her first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via intramuscular on 21Dec2020 07:30 at single dose on her left arm for covid-19 immunization. Medical history included hypertension. No allergies to medications, food, or other products. Concomitant medication was received within 2 weeks of vaccination included lisinopril. The patient experienced headache and soreness to the injection site on 21Dec2020 10:00. Treatment included Tylenol 500mg. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19, since the vaccination, the patient had not been tested for COVID-19. The outcome of the events was recovered in Dec2020. No follow-up attempts are possible. No further information is expected.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	912387-1	muscle aches; chills; Fatigue: This is a spontaneous report from a contactable nurse (patient). A 51-year-old female patient received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, expiration date: 31Mar2021), via an unspecified route of administration on 19Dec2020 19:30 at single dose to prevent Covid. Medical history included COVID-19 from 30Oct2020 to 24Nov2020. There were no concomitant medications. Eight hours after getting the vaccine (20Dec2020 03:30), she had muscle aches and chills, she also had fatigue on 20Dec2020. She was worried. She was concerned that she had done something crazy. She was through Covid for sure. She wasn't able to do much. She was off work that day and didn't have to do anything. She would not have been able to work. The muscle aches were rivaling the worst days of Covid. She had Covid for 3 weeks. Then she had to wait another 10 days to get over the symptoms. She never had to go to the hospital. These muscle aches that she experienced after the injection were as intense as when she had Covid. The Lot on the patient card was difficult read. The information was hand written and squished in. She was unsure if it was EK5B30 or EK5030 or EK5730. The patient underwent lab tests and procedures which included COVID test: positive on 30Oct2020, negative on 24Nov2020. The outcome of muscle aches and chills was recovered on 21Dec2020, fatigue was recovering. The event muscle ache reported as serious, with serious criteria medically significant. Information about lot/batch number has been requested.; Sender's Comments: The Company considers there is a reasonable possibility that the reported muscle ache is related to the administration of BNT162B2, based on the plausible temporal association and the known safety profile of the suspect. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RA, IEC, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	912426-1	He was diagnosed with COVID 19; He was diagnosed with COVID 19; This is a spontaneous report from a contactable consumer (front line hospital worker) reporting for himself, received via a Pfizer sales representative. This male patient of unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on an unspecified date in Dec2020, at single dose, for COVID-19 immunization. Medical history and concomitant medications were not reported. On an unspecified date in Dec2020, after vaccination, the patient was diagnosed with COVID 19 with unknown outcome. Information on the lot/batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	912432-1	"positive rapid COVID testing positive/COVID-19 PCR test positive; positive rapid COVID testing positive/COVID-19 PCR test positive; This is a spontaneous report from a contactable nurse (patient herself). A 42-year-old female patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899, Expiration date: Mar2021), intramuscularly at site of right deltoid at 08:00 on 16Dec2020 at single dose for COVID-19 immunization. Medical history included ongoing high blood pressure. The patient received a flu shot in Oct2020. The patient's concomitant medications were not reported. The patient was tested positive for rapid COVID-19 testing on 21Dec2020 and was also positive for COVID-19 PCR test on 22Dec2020. No treatments after positive testing and patient was not hospitalized. The outcome of events was not recovered.; Sender's Comments: The reported ""tested positive for rapid COVID-19 testing"" after 4 days of immunization with BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) is considered related to BNT162B2 administration."	Blood pressure high	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	912437-1	<p>Lymphadenopathy; Injection site pain/pain and tenderness under her arm; Lethargy; tired/did not feel like getting out of bed; Headache; arm was swollen/her sleeve was tighter, 1.5-2 inches bigger than her other arm; This is a spontaneous report from a contactable nurse reporting on behalf of herself. This 50 years old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot E31685) on 19Dec2020 at 11:15, at single dose, in right deltoid, for COVID-19 immunization. No other vaccine was given on the same date or within 4 weeks before. Medical history included ongoing epilepsy, ongoing depression and anxiety, COVID in late Oct2020 early Nov2020 (so her manager advised her to get the vaccine), allergies as a child, ongoing allergy to penicillin that showed up on an allergy test, ongoing allergy to house dust and trees, things like that. She previously received influenza vaccine in Oct2020, for immunization. AE(s) following prior vaccinations: none. Family medical history relevant to AE(s): none. Concomitant medications included topiramate (TOPAMAX) and brivaracetam (BRIVIACT), both for years, for epilepsy and duloxetine HCl (CYMBALTA) from Aug2020, for depression and anxiety. The reporter related Cymbalta use to COVID. The patient experienced lymphadenopathy on 21Dec2020, headache on 20Dec2020, injection site pain on 20Dec2020 at 03:00, lethargy on 20Dec2020, tired on 20Dec2020, arm was swollen on an unspecified date in Dec2020. Lymphadenopathy was reported as medically significant. The other events were reported as non-serious. The reporter stated it was painful but everyone told her it would be so she expected that. At about 3 A.M. on 20Sun2020 she woke up to her arm hurting when she tried to turn on her right side. She had taken 2 of the arthritis strength paracetamol (TYLENOL) the night before because she was told it was going to hurt, that might have been the reason she did not notice it before then. This was just injection site pain. At this point, she still had some injections site pain and it was tender if bumped but it was better than before. On 20Dec2020 she did not go to church because she felt tired and did not feel like getting out of bed, she also had a headache but these things were expected by her. She stayed in bed till noon. She went to work on 21Dec2020 and in that morning when she went to apply deodorant she noticed pain and tenderness under her arm. Her arm was swollen and she noticed that her sleeve was tighter so she had her husband measured her arm and it was 1.5-2 inches bigger than her other arm. It was tight and tender, actually at this point it was more than tender when she put her deodorant on. She was also giving the vaccine. No other treatments were given and she had not called her doctor about this. No emergency room or physician office visit were not required. Relevant tests: none. Headache and lethargy resolved on 20Dec2020. Injection site pain was resolving. Lymphadenopathy had not yet resolved and was reported as aggravated. The outcome of the other events was unknown. The reporter considered there was a reasonable possibility that headache, injection site pain, lymphadenopathy, lethargy were related to BNT162B2 vaccine.; Sender's Comments: Based on available information, a possible contributory role of the subject drug cannot be excluded for the lymphadenopathy and the other reported events due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p>	Allergy to plants (She is also allergic to house dust and trees, things like that.); Anxiety depression; Dust allergy (She is also allergic to house dust and trees, things like that.); Epilepsy; Penicillin allergy (Currently she is allergic to penicillin that showed up on an allergy test.) COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	912441-1	<p>test positive for COVID-19; test positive for COVID-19; This is a spontaneous report from a contactable consumer (patient). A 26-year-old female patient received the first dose BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 20Dec2020 at single dose in left arm for covid-19 immunization. There was none medical history or concomitant medications. The reporter reported that she got the vaccine on the 20Dec2020 and found out Monday (21Dec2020) that she was exposed to someone who was positive so they used a rapid test post exposure on the 22Dec2020 that the result was positive for COVID-19. She reported she knew that the vaccine would not have given her COVID, and it was likely she had it before she got the vaccine and didn't know she had it because she didn't have symptoms. The outcome was unknown. Information about lot/batch number has been requested.</p>	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	912471-1	<p>Dizziness; Headache; chest pain; This is a spontaneous report from a non-contactable physician (patient). A 40-year-old female non-pregnant patient received BNT162B2 (Pfizer-BIONTECH Covid-19 Vaccine), intramuscularly on 22Dec2020 12:00 at a single dose in arm for COVID-19 immunization. Medical history included known allergies: roasted chestnuts. Concomitant medication included ascorbic acid, betacarotene, biotin, calcium carbonate, calcium phosphate, chlorine, colecalciferol, cupric oxide, ferrous fumarate, folic acid, iodine, magnesium oxide, manganese sulfate, molybdenum, nickel sulfate, nicotinamide, pantothenic acid, phosphorus, potassium chloride, pyridoxine hydrochloride, retinol acetate, riboflavin, selenium, silicon, thiamine, tin, tocopherol, vanadium, vitamin b12 nos, zinc oxide (MULTIVITAMINS & MINERALS PLUS LUTEIN) within two weeks of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced dizziness, headache, chest pain, all on 23Dec2020 21:30. No treatment received for the event. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The outcome of events was recovering. This is a non-serious report. No follow-up attempts are possible; information about lot/batch number cannot be obtained.</p>	No current illness for this event.	MULTIVITAMINS & MINERALS PLUS LUTEIN

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	912509-1	Injection site soreness 10 hours post administration; Still sore injection site this morning; Mild headache, muscle achiness and chills also 10 hours post administration of vaccine; Mild headache, muscle achiness and chills also 10 hours post administration of vaccine; This is a spontaneous report from a contactable other HCP. This 47-year-old female other HCP (patient) reported for self that she received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number=EK9231) intramuscularly at the right arm at single dose for COVID-19 immunization on 23Dec2020; 09:45 AM. Relevant medical history included Asthma, Ulcerative Colitis and allergies to Penicillin, Fiorinal with Codeine. The patient received Ibuprofen, Mesalamine, Pantoprazole within 2 weeks of vaccination. The patient experienced injection site soreness 10 hours post administration on 23Dec2020, mild headache, muscle achiness and chills also 10 hours post administration of vaccine. The patient felt better in the next morning on 24Dec2020, while she still had sore injection site this morning. No treatment was received. The final outcome of events was resolved. All events were considered as non-serious. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19.	No current illness for this event.	; MESALAMINE;
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	913170-1	"vertigo; left facial tingling; lip tingling/tingling in the left corner of the mouth; he feels hazy/haziness; facial numbness; heaviness and tingling in the left corner of the mouth; This is a spontaneous report from a contactable physician (patient). A 32-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number EL0140), via an unspecified route of administration on 18Dec2020 08:15 am at single dose for covid-19 immunization. Vaccine location was left deltoid and it was the first dose. The facility type vaccine was hospital. Medical history included raynaud from an unknown date. The patient clarified that Raynaud's is not officially diagnosed. When he was in medical school and would take Methylphenidate to study his fingers would get pale and in cold weather he gets it in his hands. No known allergies. Patient didn't do relevant test. There were no concomitant medications. The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine. Physician stated that received COVID-19 Vaccine on Friday. A couple of hours later he had left facial tingling and lip tingling that lasted about an hour. The left facial tingling and the lip tingling started between 9AM and 10AM. It felt like facial numbness and heaviness and tingling in the left corner of the mouth. It was less tingling and more of a heaviness. Vertigo started on the second night (19Dec2020). Whenever he sit back in a chair quickly he has vertigo as well as when he laid back in the bed at night. He took no medications. Throughout the day he felt hazy. Haziness that is consistent. The best way to described it is if you drank a lot of alcohol and were well hydrated. The next morning you feel fine, but there is something there and feels off, but you can't put a finger on it. There was no adverse event require a visit to emergency room or physician office. The action taken in response to the events for BNT162B2 was not applicable. The outcome of events ""left facial tingling"" and ""lip tingling"" was recovered on 18Dec2020 and were reported as non-serious. The outcome of event Vertigo was not recovered, it was reported as serious-Medically significant. The outcome of other events was unknown. The drug result of events ""Vertigo"", ""left facial tingling"" and ""lip tingling"" was Related;. Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of event Vertigo cannot be totally excluded. The case will be reassessed if additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	913935-1	"diagnosed with COVID-19; diagnosed with COVID-19; This is a spontaneous report from a contactable pharmacist. A female patient of an unspecified age (reported as 62 without unit) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number and expiration date not provided), via an unspecified route of administration on 16Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. Reporter requested information on the administration of the second dose of the COVID-19 vaccine to a patient. The patient received vaccine first dose 16Dec2020; she was diagnosed with COVID-19 on 18Dec2020; started taking the medication ""Bamlanivimab"" on 21Dec2020. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: There is not a reasonable possibility that reported ""diagnosis with COVID-19"" is related to BNT162B2 vaccine. Event developed 2 days after vaccination. The event is most likely intercurrent medical condition."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	913952-1	positive COVID-19 test with no symptoms; positive COVID-19 test with no symptoms; This is a spontaneous report from a contactable other HCP. A 93-year-old male patient received first dose of BNT162B2(PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose by injection at arm for COVID-19 immunization. Medical history and concomitant medications reported as none. The patient was not been treated with immunomodulating or immunosuppressing medications or received any other vaccines around the time of COVID-19 vaccination. The patient, nursing home had turned positive after the getting the vaccine. The patient was tested negative for COVID 19 before getting the vaccine on 18Dec2020, then took his first dose of COVID vaccine. The patient had no reaction to the vaccine. The patient got on the plane on 19Dec2020 and tested positive on 22Dec2020. PCR test for COVID 19 was done on 22Dec2020 and received the results on 23Dec2020 and it was detected(PCR test was positive). Event reported as non-serious. The patient still had had no symptoms before the test and none after the test came back detected. He was pretty healthy. It was unknown if patient would receive the second dose but he was scheduled to receive it. Patient was not admitted to an Intensive Care Unit. Patient did not display clinical signs at rest indicative of severe systemic illness. Patient did not require supplemental oxygen (including high flow or ECMO) or receive mechanical ventilation. Patient had no any new or worsened symptoms/signs during the COVID-19 illness experienced (including date of onset/worsening). The patient did not receive any additional therapies for COVID-19. The event did not require the initiation of new medication or other treatment or procedure. Patient's outcome with COVID-19 reported as not currently ill. The outcome of the event was unknown. Information on the Batch/Lot number has been requested.; Sender's Comments: The patient received BNT162B2 on 18Dec2020 and took plane on 19Dec2020. The patient was tested positive for COVID-19 on 22Dec2020. The event occurred only 4 days after first vaccination and therefore the patient was not under full protection by vaccine.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	913959-1	"patient tested positive for COVID 19 the same day; patient tested positive for COVID 19 the same day; This is a spontaneous report from a non-contactable Nurse. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The relevant medical history and concomitant medications were not reported. The COVID 19 vaccine was administered to the patient and the patient tested positive for COVID 19 the same day. Patient did not have a fever and reported feeling tired. The nurse wanted to know if the immune response would be affected by having COVID 19 at the time of vaccination and will the symptoms be exacerbated because of receiving the vaccine. The outcome of the events was unknown. No follow up attempts are possible. Information on Lot/Batch could not be requested. No further information is expected.; Sender's Comments: The patient tested positive for COVID-19 on the same day when receiving BNT162B2 vaccine. And therefore there is not a reasonable possibility that reported ""tested positive for COVID 19"" is related to vaccine."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	914034-1	tested positive for COVID; positive for COVID; positive for COVID/asymptomatic; This is a spontaneous report from a contactable nurse reporting for herself. A female patient of an unspecified age received the 1st dose of bnt162b2 (BNT162B2) at single dose on 18Dec2020 for Covid-19 immunisation. The patient medical history and concomitant medications were not reported. She was tested positive for COVID, through the rapid COVID test on 27Dec2020. She stated being asymptomatic and being scheduled for her 2nd dose on 08Jan2021. She asked can she still receive the 2nd dose of the vaccine or should she repeat the vaccination series. The outcome of event was unknown. Information on the Lot/batch number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with suspected vaccine in this patient cannot be completely excluded. Further information like confirmative COVID 19 Nucleic acid/ PCR test are needed for full medical assessment.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	915163-1	"asking on how to differentiate between side effects from COVID vs vaccine side effects/also wondered if he needs to quarantine; asking on how to differentiate between side effects from COVID vs vaccine side effects/also wondered if he needs to quarantine; swelling of glands in throat/lymphadenopathy in throat; headache; Feeling a little fluish; This is a spontaneous report from a contactable healthcare professional (patient). A 61-year-old male patient received BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine, batch/lot number and expiry date were unknown), via an unspecified route of administration on 21Dec2020 18:06 at a single dose for COVID-19 vaccination. Medical history included diet controlled Type 2 Diabetic diagnosed 5 years ago in 2015. There were no concomitant medications. The patient previously got Shingles vaccine and it was a two dose vaccine. He felt a little bit like he did now after receiving the second vaccine. He felt fluish for 8-12 hours the day after receiving the vaccine. He has gotten lots of vaccines like Flu and has no responses. The patient does not have prior vaccinations within 4 weeks. The patient received the vaccine yesterday (21Dec2020), and maybe an hour ago on 22Dec2020, he started feeling swelling of the glands in throat or lymphadenopathy in throat and a little bit of headache. He has a question that he cannot find the answer to anywhere. The patient is asking on how to differentiate between side effects from COVID vs vaccine side effects? His temperature was 98.1 on unspecified date. He did not have an exact time frame for when it began. He stated, "'you get swelling in glands and then you notice it.'" He noticed about 2 hours ago and it is getting worse. Now he is feeling like he is sick. He has been volunteering and giving the vaccines over the past two days himself. He is feeling now a little fluish. He doesn't know how to say it other than tired and just doesn't feel good. He would go to work like this and does not feel it is medically significant. He does feel like he is deteriorating but that is only a guess. He felt a little worse than an hour ago. He also wondered if he needs to quarantine because he is signed up to give the vaccines and would not want to do that if he should not. No ER or physician's office required. The outcome of the events was not recovered. Information on batch/lot number has been requested.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of reported events cannot be totally excluded. The case will be reassessed if additional information becomes available."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	915173-1	tested positive for Covid; tested positive for Covid; This is a spontaneous report from a contactable consumer (patient) from a Pfizer-sponsored Program Pfizer First Connect. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Lot number Unknown, via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. The patient was upset. She was part of the COVID Trial in and this past week (in Dec2020) she started to get sick and tested positive for COVID. They gave her a diary which she had to fill out weekly, so she filled it out and put that she had COVID. She never heard from anyone. She stated the testing site people and snarky attitudes and when they went no one was wearing masks. She was told by the testing site, they couldn't make people wear them. Relayed that she could do an escalation and have someone reach out to her in regards to this. The patient underwent lab tests and procedures which included Covid test: positive on unspecified date in Dec2020. The event outcome was unknown. Information on the Batch/Lot number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	915214-1	Currently have shortness of breath, chest pain, fatigue, nausea, body aches, joint pain, and injection site pain.	None	Claritin and singular
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	915604-1	Sent home from work after receiving vaccine. I immediately developed sore throat. First 3 days I was miserable and then this whole week everything has bad. Outside of ears were burning. Stomach turned immediately. I thought I was going to vomit. Top of my head started spinning. I am still foggy. Breathing was never altered.	No	Lyrica, gabapentin, flexeril, pantoprazole, meloxicam, Tylenol for pain.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	916303-1	I had shortness of breath	No	Levorhoxatin
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918739-1	"Tingling in lower legs- neuropathy like; Fever 102.9; Tingling in lower legs- neuropathy like; Severe cramping in hands and feet; Severe bone pain; This is a spontaneous report from a contactable other healthcare professional (patient). A 39-year-old female patient received the first dose of bnt162b2 (COVID-19 vaccine) lot no: EL0140, via an unspecified route of administration in left arm on 18Dec2020 15:15 at a single dose for COVID-19 immunization. Medical history included acid reflux and known allergies to PCN, both from an unknown date and unknown if ongoing. The patient was not pregnant at the time of report. Concomitant medication included omeprazole (PROTONIX), ibuprofen (MOTRIN). No other vaccines were administered in four weeks. On 19Dec2020 at 14:30, the patient experienced fever 102.9 "'normal for vaccines i know'", tingling in lower legs neuropathy like, severe cramping in hands and feet, and severe bone pain. The patient recovered from the events in Dec2020. The patient did not receive treatment for the events. The events were reported as non-serious. The patient didn't have COVID prior to vaccination and was not tested post vaccination.; Sender's Comments: A possible causal association between administration of bnt162b2 and the onset of neuropathy like cannot be excluded, considering the plausible temporal relationship. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."	No current illness for this event.	PROTONIX [OMEPRAZOLE]; MOTRIN [IBUPROFEN]

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918743-1	<p>shaking uncontrollably/she was full of shakes to the point the bed was shaking; chills; Woke up in the middle of the night; body aches; as painful as a strep infection; sore throat that was as painful as a strep infection/throat feels sore to the point of Strep/Throat soreness: Felt like sharp razor blades; Feels like she is having an extreme immune response; Feels congestion; severe serum sickness/weird serum sickness; high fever/Had a fever over 101; This is a spontaneous report from a contactable nurse(patient). A 32-year-old female patient received BNT162B2(for number EH9899) via an unspecified route of administration at Arm Left on 21Dec2020 (from 16:30 to 17:00) at the age of 32 years old at single dose for doesn't want to bring COVID home to her family. The medical history included Migraine headaches. The concomitant medications were not reported. The patient had so many immunizations for international travel, had Yellow Fever vaccine, all of the Gardasil vaccines, had MMR vaccine four times because she never developed immunity to it until the fourth round, got a flu shot yearly, got Tdap vaccine every five years because she was an HCP, did Emgality shots(not done it this month. Emgality had a protein inhibitor, was supposed to get Emgality shot on 21Dec2020). On 22Dec2020 the patient experienced severe serum sickness, high fever, body aches to the point that she was shaking uncontrollably, sore throat that was as painful as a strep infection; Caller mentioned she was taking tyleni and benadryl for her symptoms. The patient was a Nurse Midwife. She got the vaccine on Monday evening at 4:30PM. Feeling like she was having a weird serum sickness. Woke up in the middle of the night and she was full of shakes to the point the bed was shaking. She had a fever over 101. Felt like she was having an extreme immune response. She was taking Tylenol and Benadryl around the clock. Woke up this morning and her throat feels sore to the point of Strep. Wondering if she need to distance and get some kind of test. Has been wearing a mask all of the time and doesn't know of anyone people who have COVID that she has been in contact with. Feels congestion and sore throat. Shakes and chills: Began at 02:30. Hard core chills and shakes. High fever over 101: same time as chills and shakes. Woke up from a dead sleep. Didn't have a working thermometer but knows her temperature must have been over 101 by the way she felt. She didn't feel that crappy unless her fever is over 101. She can gauge her own temperature. She experienced throat soreness: Felt like sharp razor blades. The patient was taking numbing throat lozenges. Seriousness: Would say serious. Didn't require hospitalization. She self-treated. Had she not had to work, she would probably have stayed in bed. Has been taking round the clock medicine. The outcome of the events was unknown. The information on the batch number has been requested.; Sender's Comments: The Company cannot completely exclude the possible causality between the reported serious events including severe serum sickness, high fever, body aches, shaking uncontrollably, sore throat that was as painful as a strep infection, feels like having an extreme immune response, congestion, chills, woke up from a dead sleep and the administration of the COVID 19 immunization with BNT162B2, based on the reasonable temporal association. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to those, as appropriate.</p>	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918744-1	<p>Have a fever with a high of 99.6 Fahrenheit; felt winded like she has exerted herself more than expected/shortness of air; Coughing/cough got worse; She is covid positive/Tested positive for COVID 19; She is covid positive/Tested positive for COVID 19; Shortness of breath/Shortness of breath was reported as worsened/feels winded; Tachycardia; Has been sick ever since; Felt like she was in a fog, on a cloud, heavy and out of it; She felt hot and weird but had no fever; Headache; Burning sensations in her legs; Extreme fatigue, want to go to bed; headache went away and she felt like the congestion was clearing up some; Arm was sore; This is a spontaneous report from a contactable ICU nurse (patient [Registered nurse ADN]) via Pfizer-sponsored program. A 38-year-old female patient received single dose of BNT162B2 (lot number: EK5730), via an unspecified route of administration (right arm) on 16Dec2020 20:30 for immunization (for front line health care worker). Medical history included allergies; acid reflux; patent foramen ovale (PFO); supraventricular tachycardia (SVT) without treatment, vitamin D low and ongoing smoker. The patient had no other history/family history. Concomitant medication included loratadine (CLARITIN) taken for at least 5 years for allergy, famotidine from Dec2020 for acid reflex, and vitamin D taken for 5 or more years for vitamin D low; all given orally and were ongoing. The patient had no other prior vaccines within 4 weeks of Covid vaccination. Patient had been taking Covid tests on and off due to her immunocompromised daughter. On 15Dec2020 she took the PTR that took three to four days for results; she tested negative for Covid and was completely asymptomatic. She then received the COVID 19 vaccine 16Dec2020. Her test was positive for COVID 19 on 18Dec2020 and she had been sick ever since. She received the vaccine at the hospital where she works. The vaccine was not administered at facility. She further reported she was fine after getting the COVID 19 vaccine. Her right arm was sore/ started to hurt about four or five hours later on 16Dec2020 but then was fully after 24 to 48 hours. She started to feel sick on 18Dec2020 (Friday evening). States she went to bed Friday morning after the night shift. She felt fine, better than normal. That same day (18Dec2020) she woke up at 1700 and felt like she was in a fog, on a cloud, heavy and out of it. She walked around for a while and that sensation didn't go away. She felt hot and weird but had no fever. Then at 1830 she got the alert on her phone that told her she was positive for COVID 19. She started to feel other symptoms on 18Dec2020 including headache, shortness of breath, tachycardia, burning sensations in her legs; extreme fatigue, wanting to go to bed that persisted from Friday to Sunday. Then on 20Dec2020, Sunday afternoon, her headache went away and she felt like the congestion was clearing up some. Mentions she did have a fever (onset date unspecified) with a high of 99.6 Fahrenheit; but it went back down to 99.0 Fahrenheit (date/s unspecified). On 20Dec2020 the patient experienced coughing. On 21Dec2020 (Monday) she started coughing more but states her O2 was fine and her breathing was okay. However, when walking around she felt winded like she has exerted herself more than expected. She then clarified that on 21Dec2020, she experienced shortness of air and the cough got worse but it has now plateaued. She did call her HCP and they were holding off on treatment at the time. No investigation assessment was performed. The patient was not admitted to an Intensive Care Unit. The patient did not display clinical signs at rest indicative of severe systemic illness nor did she require supplemental oxygen or receive mechanical ventilation. No preexisting diseases worsened during the SARS-CoV2 infection. The patient considered shortness of breath, and tachycardia as serious: medically significant while the events headache, burning sensations in her legs, fatigue, Coughing, and feels winded were considered as not serious. The events headache, shortness of breath, tachycardia, burning sensations in her legs, fatigue, Coughing, and feels winded were ongoing at the time of reporting. Shortness of breath worsened. The patient recovered from arm was sore on an unspecified date in Dec2020; and was recovering from tachycardia, sick, headache and congestion. The outcome of felt like she was in a fog, on a cloud, heavy and out of it; felt hot, and fever was unknown while not recovered for the other events.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events due to temporal relationship. However, the reported events may possibly represent intercurrent medical conditions in this patient. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including chest x-ray, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p>	Smoker (Is the patient a smoker/former smoker? Yes, current.)	CLARITIN [LORATADINE]; ; VIT D
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918748-1	<p>just kind of having blackout; Severe fatigue/fatigue; Severe myalgia; Some congestion; Severe headache; Hazziness; This is a spontaneous report from a contactable other healthcare professional (HCP), who is also the patient. This patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration in Dec2020 at single dose for COVID-19 immunisation. Relevant medical history and concomitant medications were not reported. In Dec2020, the patient experienced just kind of having blackout, severe fatigue, severe myalgia, some congestion, severe headache and hazziness. On day six, symptoms improved and suddenly he/she was having symptoms again, severe myalgia, some congestion severe headaches and fatigue. The outcome of the events was unknown. The information about batch/lot number has been requested.; Sender's Comments: This report fails to include the basic information that is required for an independent medical evaluation. Assessment is postponed after receipt of a more complete case report. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.</p>	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918749-1	Flu like symptoms like myalgia, achy head, mental cloudiness; Flu like symptoms like myalgia, achy head, mental cloudiness; Flu like symptoms like myalgia, achy head, mental cloudiness; Flu like symptoms like myalgia, achy head, mental cloudiness; Deep cough; This is a spontaneous report from a non-contactable physician. A female patient of unspecified age received the first single dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on an unspecified date in Dec2020, in left upper arm like deltoid, for COVID-19 immunization. Medical history and concomitant medications were not reported. On an unspecified date in Dec2020, immediately after receiving the vaccine, the patient experienced a deep cough which came on all of a sudden, followed 31 hours post vaccine by flu like symptoms like myalgias, achy head and mental cloudiness. She was feeling a bit better on 22Dec2020 morning and she was back at work. So, it was like a short couple of hours, maybe 24 hours turnaround. The events were resolving at the time of report. No follow-up attempts are possible; information about lot/batch number cannot be obtained.; Sender's Comments: The Company cannot completely exclude the possible causality between the reported flu like symptoms like myalgias, achy head and mental cloudiness and the administration of the COVID 19 vaccine BNT162B2 based on the plausible temporal association. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918750-1	Urination bleeding; This is a spontaneous report from a contactable consumer (patient). A patient of unspecified age and gender received BNT162b2 (Solution for injection, lot number and expiration date not provided), via an unspecified route of administration at single dose on 22Dec2020 for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient experienced urination bleeding in Dec2020 and wanted to know if it was going to be a side effect. The outcome of the event was unknown. Information on the lot/batch number has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918751-1	"severe fever; chills; severe night sweats; hives throughout my body; a rash on my face; This is a spontaneous report from a contactable nurse. This nurse reported for half that the 37-year-old female patient received first dose of bnt162b2 (BNT162B2, product: COVID 19, brand: Pfizer), via an unspecified route of administration on Left Arm on 19Dec2020 10:30AM at single dose for covid-19 immunisation. No Pregnant at the time of vaccination. Medical history included Known Allergies to medications, food, or other products:Cocoa butter. Concomitant medications were unknown. Facility where the most recent COVID-19 vaccine was administered was Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient reported that ""Starting seven hours after the vaccine, I experienced severe fever and chills. The next morning, despite multiple anti-pyretics, the fevers/chills were worse. Also I experienced severe night sweats, likely related to the fevers. Three days after the vaccine, I began to have hives throughout my body and a rash on my face. Responds to Benadryl, but eventually reappears."" The event started from 19Dec2020 05:30 PM. Treatment was received for the adverse event included Anti-pyretics, anti-inflammatories, anti-histamine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. Facility type vaccine was hospital. No other vaccine in four weeks. The patient recovered with lasting effects. No Covid prior vaccination. No Covid tested post vaccination. The outcome of the event was recovered/resolved with sequel in Dec2020. No follow-up attempts are possible; information about lot/batch number cannot be obtained.; Sender's Comments: The reported events severe fever and chills, severe night sweats, and hives and a rash on face were likely related to the use of first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), due to temporal relationship and clinical course. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918759-1	"burst blood vessel in left eye/blood in her eye; This is a spontaneous report from a contactable physician (patient). A 35-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number EH9899, expiry date 01Mar2021), via an unspecified route of administration on 23Dec2020 at single dose for covid-19 immunization. Vaccine location was left deltoid. The facility type vaccine was hospital. Medical history included ongoing rheumatoid arthritis for about 8 years. No known allergies. Patient didn't do relevant test. Concomitant medication included duloxetine hydrochloride (CYMBALTA) for rheumatoid arthritis for 2 years, sulfasalazine for rheumatoid arthritis for 4 months, it's unknown if they were ongoing. The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient received the vaccine yesterday (23Dec2020), which she was very excited about, but today (24Dec2020) she woke up with a burst blood vessel in her left eye, she appears to have blood in her eye. This has never happened to her before. She knows this can occur with patients that have COVID but didn't know if it was a side effect to receiving the vaccine. Patient didn't receive treatment for the adverse event. The action taken in response to the event for BNT162B2 was not applicable. The outcome of event was not recovered. The relatedness between COVID vaccine and event "burst blood vessel in left eye" was related by reporter. Pfizer is a marketing authorization holder of [BNT162B2] in the country of incidence or the country where the product was purchased (if different). This may be a duplicate report if another marketing authorization holder of [BNT162B2] has submitted the same report to the regulatory authorities.; Sender's Comments: "Burst blood vessel in eye" is not uncommon in general population, and there are many causes of the event. Considering temporal relationship, a contribution role of the injection of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) to the reported Eye haemorrhage cannot be excluded. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."	Rheumatoid arthritis (for about 8 years)	CYMBALTA;
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918762-1	congestion in the throat and upper lungs; congestion in the throat and upper lungs; This is a spontaneous report from a contactable other healthcare professional (patient). A 61-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: EK5730), intramuscular on the left arm on 21Dec2020 09:30 at a single dose for COVID-19 immunization. The patient's medical history included herpes 2. The patient was not pregnant. The patient had no known allergies to medications, food, or other products. There were no concomitant medications. The patient was not diagnosed with COVID-19 prior to vaccination and had not been tested for COVID-19 since the vaccination. On 26Dec2020 09:00, the patient experienced congestion in the throat and upper lungs. Oxygen level was 98 and temperature was 97.7. She had a good diet, no dairy, and no Christmas junk food, so for the patient, it was inexplicable. She was also consistent at mask wearing and all the precautions. No treatment was received for the adverse events. Outcome of the events was not recovered. The events were reported as non-serious.; Sender's Comments: Considering the temporal gap between the vaccination and the event onset, the Company considers the event pulmonary congestion is unlikely related to vaccination with BNT162B2. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918764-1	I got my left arm pit, lump on it, I have bigger than 1 cm 2 lumps, hidradenitis/Pain under my arm; Patient received Pfizer Covid-19 Vaccine who is a nursing mom; Patient received Pfizer Covid-19 Vaccine who is a nursing mom; Mastitis; I got Myalgia all over the body, especially on my shoulders and back; I had chills but my temperature was normal; This is a spontaneous report from a contactable physician (patient herself). This physician reported information for herself (mother) and baby. This is the mother case. A 40-year-old female patient received her first dose of bnt162b2 (BNT162B2, also reported as Pfizer Covid-19 Vaccine, lot/batch number and expiry date were not reported), via an unspecified route of administration on 20Dec2020 18:30 at single dose for Covid-19 immunisation. The patient medical history and concomitant medications were not reported. The patient informed that she got in her left shoulder and left arm pit, lump on it. It was bigger than 1 cm 2 lumps, hidradenitis under her pits arm same size on 21Dec2020. She also reported that she was nursing mom to her self-kid which is 16 months old. She had Mastitis right now (20Dec2020) and informed that she hadn't it her life before. She got her vaccine on Sunday (20Dec2020) in night. She started to have pain under her arm on monday afternoon (21Dec2020) and then since yesterday (20Dec2020) she had mastitis. The mastitis in the right side, lump and the in the left side, which was the site of the vaccine. She never got a fever but got myalgia all over the body, especially on her shoulders and back and also she had chills but her temperature was normal. The outcome of events was unknown. Information on the Lot/Batch Number has been requested.; Sender's Comments: Based on the close temporal relationship, the association between the event mastitis with BNT162b2 can not be completely excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.; Linked Report(s) : US-PFIZER INC-2020520371 Fetal case	No current illness for this event. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918766-1	<p>dizzy/feet faint; perspiring; like blood not getting to my head; had to get on hands and knees, crawl; felt like my heart may be racing 10 min after vaccine/heart felt off beat and like blood not getting to my head/heart rate was 142; felt like my heart may be racing 10 min after vaccine/heart felt off beat and like blood not getting to my head/heart rate was 142; arm sore day #1 and #2- not unexpected; This is a spontaneous report from a contactable Physician(patient). A 48-year-old female patient received first dose (BNT162B2, lot number EK5730), intramuscular at Arm Right on 18Dec2020 14:15 at the 48-year-old at single dose for COVID-19 immunization. The medical history included elevated blood pressure , allergic to sulfa, hypertension and Covid. The concomitant products included alprazolam, diphenhydramine hydrochloride (BENADRYL), spironolactone, metoprolol for hypertension, colecalciferol (VITAMIN D 3). The patient previously took nubaine and experienced drug allergy. The patient also happened to be a physician in private practice and received the vaccine at her local hospital. The patient had hypertension which was under excellent control on metoprolol 25 mg. She took it as prescribed every day surrounding the vaccine. On day #1 at the vaccine she felt like her heart may be racing 10 min after vaccine was about 80 on 18Dec2020 14:25. nothing serious. The patient experienced arm sore day #1 and #2 and not unexpected. On about 7 pm the day after the vaccine 19Dec2020 she was tachy at rate of about 105. She took her metoprolol heart rate never came down. At about 9:30 pm on 19Dec2020 when her rate should have been about70- she got up from couch after falling asleep. Upon standing felt like she was very dizzy. Walked upstairs, started to feel faint, perspiring, heart felt off beat and like blood not getting to my head. She had to get on hands and knees, crawl and heart rate was 142 and sustained for almost a minute. It took over an hour for it to come back to 86 and stayed there all night. There was not treatment to all of the adverse events. The outcome of the events was Recovering.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the palpitations, tachycardia and other reported events due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including EKG, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p>	No current illness for this event.	; BENADRYL; ; VITAMIN D 3

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918768-1	Diarrhea persisted 24 hours with mucous and bloody mucous after all fecal material was exhausted.; Did have one episode of chills; This is a spontaneous report from a contactable physician. A 51-year-old female patient received the first dose of bnt162b2 (BNT162B2) lot no: EK9231, intramuscular on 23Dec2020 09:45 at a single dose for COVID-19 immunization in workplace clinic. Medical history included hypothyroid, allergies from bee sting, and covid-19 from Apr2020, all unknown if ongoing. Concomitant medication included levothyroxine sodium (SYNTHROID). The patient did not receive other vaccine in four weeks. On 25Dec2020, in the late evening at 11:45 PM-almost midnight, the patient experienced diarrhea, severe, without nausea or vomiting. Did have one episode of chills that resolved. Diarrhea persisted 24 hours with mucous and bloody mucous after all fecal material was exhausted. The patient had COVID-19 in Apr2020 and had positive antibodies in Jun2020 with high titers. She confirmed with their ID chief that she should proceed to receive the vaccine. Diarrhea resolved in 24 hours. Some lingering increased GI activity. No fever (temp 99.0F) (Dec2020). The patient recovered from events without treatment in Dec2020. The events were reported as non-serious. The patient was not tested for COVID-19 post vaccination.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of diarrhea, severe cannot be excluded, considering the plausible temporal relationship and the known adverse profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate	No current illness for this event.	SYNTHROID
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918773-1	"have COVID; have COVID; bone-crushing-pain; fever; This is a spontaneous report from a contactable consumer reporting for a patient (nurse). A 47-year-old female patient received first single dose of BNT162B2 (Solution for injection, batch/lot number and exp date not reported), via an unspecified route of administration on 20Dec2020 for immunization. The patient's medical history concomitant medications were not reported (unknown). Patient was an ER Nurse and took first dose of vaccine and then described mild/moderate symptoms on day one only. On 23Dec2020, patient posted they have COVID (positive COVID test). Contracted from spouse who got it from work. She further described it as "hit by a truck."" On Day 4 she describes her COVID symptoms: bone-crushing-pain when fever rises. Symptoms were COVID symptoms, not directly related to vaccine. The events/symptoms started on 20Dec2020. Patient had no Covid prior vaccination. The patient was COVID tested post vaccination. The patient considered the events as non-serious. The outcome of events was not recovered. Information on Lot/Batch number has been requested."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918775-1	Golf ball size lump in armpit of injection arm; This is a spontaneous report from a contactable nurse. A 49-year-old female patient received bnt162b2 (BNT162B2), via an unspecified route of administration on left arm on 19Dec2020 18:15 at SINGLE DOSE for COVID-19 immunization. There was no medical history reported. Concomitant medication included estradiol (ESTROGEN), and meloxicam. On 26Dec2020 08:00, the patient experienced golf ball size lump in armpit of injection arm. The patient did not receive treatment for the adverse event. The outcome of the event was not recovered. Information on the lot/batch number has been requested.	No current illness for this event.	ESTROGEN;
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918775-1	I had seizure like 3 times; Vasovagal reaction; Fever; Headache; Weakness; It's just little bit shaky and breathless; It's just little bit shaky and breathless; allergic reaction; This is a spontaneous report from a contactable consumer. A 40-year-old female patient received bnt162b2 (BNT162B2, lot number: EK5730), via an unspecified route of administration on 24Dec2020 at a single dose for covid-19 vaccination. There were no relevant medical history and concomitant medications. The patient reported that on an unspecified date, she had an allergic reaction. She had vasovagal reaction and seizures. Vasovagal was an allergic reaction that happened, and added that basically it's an allergic reaction. The patient experienced fever, headache, and weakness like right now. It was just little bit shaky, ever since yesterday and she had been way off like she take it as instruction yesterday, weakness, headache and breathless did not stopped from yesterday. The patient had been taking Tylenol for fever and headache. The patient reported that the events persisted. On 24Dec2020, lab work was done at the hospital, and she was told that the lab work was okay and they did CT scan of head because she developed seizure. She had seizure like 3 times so they scanned her brain. The outcome of the events was not recovered.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918778-1	developed a migraine; nausea; sensitivity to light and sound; sensitivity to light and sound; she developed significant loss of mental clarity (brain fog); On 18Dec in the AM, developed progressive severe soreness at injection site, worse than any other vaccine, hurt even just the touch. This lasted about a total of 36 hours and progressively improve; brain fog; retroorbital headache/intermittent mild tension type frontal headache; This is a spontaneous report from a contactable physician (patient). A 29-year-old female patient received first dose BNT162B2 (lot number EH9899), via an unspecified route of administration on 17Dec2020 12:00 at 29 years old at single dose at Left arm for COVID-19 immunization. Medical history included Mirena IUD, personal and family history of retinal migraines (without headache). The concomitant medications were magnesium citrate, melatonin, ademetionine (SAME) and fish oil. On 18Dec2020 in the AM, developed progressive severe soreness at injection site, worse than any other vaccine, hurt even just the touch. This lasted about a total of 36 hours and progressively improved. There was no swelling, redness, or other local symptoms. In the afternoon on 18Dec2020, she developed significant loss of mental clarity (brain fog) while at work. In the evening on 18Dec2020, developed mild retroorbital headache (this was actually the first headache of my life). All day 19Dec2020 and about half the day of 20Dec2020 developed a migraine (also the first of my life), experienced as retroorbital pounding headache, sensitivity to light and sound in 19Dec2020, nausea without vomiting in 19Dec2020, and loss of mental clarity. She had intermittent mild tension type frontal headache on 20Dec2020 PM with all other symptoms resolved, all symptoms resolved by 21Dec2020 AM. The patient used naproxen 440 mg and Tylenol 1000 mg on 19Dec2020. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The patient was not Allergic to medications, food, or other products. The outcome of the events was recovered on 21Dec2020. The information on the batch number has been requested.; Sender's Comments: Based on information available, the reported loss of mental clarity together with other events was likely related to the first dose BNT162B2 due to temporal relationship and clinical course. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	;; SAME [ADEMETIONINE];
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918779-1	"husband and daughter tested positive/after taking the shot, she was feeling sick and had a fever/wondering if the vaccine can give the reaction, or maybe she has the virus; husband and daughter tested positive/after taking the shot, she was feeling sick and had a fever/wondering if the vaccine can give the reaction, or maybe she has the virus; having a lot IO symptoms; fever; has been feeling "sick"; This is a spontaneous report from a contactable consumer. A 56-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on the left arm on 22Dec2020 at single dose for COVID-19 immunisation. The patient's husband and daughter tested positive (COVID-19). There were no concomitant medications. The patient stated, ""had the first vaccine shot, later clarified as Pfizer COVID vaccine, on 22Dec2020, and didn't have any symptoms before that, her husband and daughter tested positive, but she was staying away from that, had no symptoms, but after taking the shot, on 24Dec2020, she was feeling sick and had a fever, and has had a fever ever since, and she is taking Tylenol and Motrin every six hours, and even then she still gets the fever, it hasn't stopped, she is having a lot IO symptoms, and is wondering if the vaccine can give the reaction, or maybe she has the virus. On 24Dec2020 is when the fever started and she was feeling sick. States she filled out a report online, on (Website)". The outcome of the events was not recovered."	COVID-19 virus test positive (husband and daughter)	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918780-1	his gums became discolored and turned purple/gums (both sides up and down) remain purple/dicoloration to the gums in his mouth; his mouth started hurting; feeling hot; Body aches; Fever; Pain to the gums in his mouth; muscle aches; sore throat; neck pain; This is a spontaneous report from a contactable nurse (patient). A 25-year-old male patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number and expiration date were not reported), via an unspecified route of administration to right shoulder on 24Dec2020 11:30 at a single dose for COVID-19 immunization. There were no medical history and concomitant medications. The patient received vaccine on 24Dec2020. He experienced body aches, fever, and feeling hot with onset of about 3-4 hours after he was administered (24Dec2020). Next day (25Dec2020), his mouth started hurting, his gums became discolored and turned purple. Gums (both sides up and down) remained purple. He will be seeing a dentist. He also reported pain and discoloration to the gums in his mouth on 25Dec2020. He had been experiencing some of the regular side effects such as muscle aches, sore throat, neck pain on an unspecified date in Dec2020. Outcome of the event gum discoloration was not recovered, of the events feeling hot, generalized aching, and fever was recovered on 26Dec2020, of the event gum pain was recovering, and of the remaining events was unknown. He reported seriousness criteria as what he thinks to be medically significant at this point; that they could be medically significant. He is scheduled to receive the second dose of the product which at this point he does not plan to change. Dose change is unknown until he determines cause of these events and on what the doctor and dentist he is going to see recommend. He believes events could be caused by the vaccine. Information on the lot/batch number has been requested.; Sender's Comments: A causal association between BNT162 and the reported events cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918782-1	extreme muscle ache that she couldn't move; I couldn't take the pain/severe body ache severe like I couldn't walk; I couldn't take the pain/severe body ache severe like I couldn't walk; extreme muscle ache that she couldn't move; High fever; Lot of chills; Itchiness; Hives; she was crying; This is a spontaneous report from a contactable Nurse (patient). A 44-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date unknown), intramuscular on an unspecified date at single dose for covid-19 immunization. Patient history was no and investigation assessment was no. There were no concomitant medications. The patient had hives and itchiness and then that was the first day that was after 8 minutes and then the next day the patient had severe body ache severe like I couldn't walk, she cried. The patient took Tylenol and Ibuprofen as she couldn't take the pain (further clarification was unknown). The patient had high fever 102.4 and was having a lot of chills. Start date of event was 24th, the 23rd she had the hives and the 24th she had the extreme muscle ache that she couldn't move and she was crying and she had the chills and the fever on the 24th. So it on started 23rd with the hives so then it started with the body aches and the fever on the 24th. Outcome of the events was recovered. The causality between the events and drug was considered as related by the reporter via Global Introspection. Information on the batch/lot number has been requested.; Sender's Comments: The Company cannot completely exclude the possible causality between the reported body ache severe like I couldn't walk, extreme muscle ache that she couldn't move, and the administration of BNT162B2, based on the reasonable temporal association. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RA, IEC, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918784-1	Left sided hearing loss; This is a spontaneous report from a contactable physician who was also the patient. A 42-year-old non-pregnant female patient received bnt162b2, lot number and expiration date were unknown, via an unspecified route of administration on 16Dec2020, 8:30 at a single dose for covid-19 immunization. The patient's medical history included antiphospholipid antibody from an unknown date and unknown if ongoing. The patient's concomitant medications were not reported. On 22Dec2020, the patient experienced left sided hearing loss. It was unknown if patient received treatment for the event. The outcome of the event was not recovered. The patient was not diagnosed with COVID prior to vaccination and has not been tested for COVID-19 since vaccination. Patient has no allergies. Patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Information on the lot/batch number has been requested.; Sender's Comments: As an individual case report there is not enough evidence to establish a causal relationship with the suspect vaccine. Currently there is no clear biological plausibility between the vaccine use and the even onset. More information such as complete medical history and concomitant medications are needed for fully medical assessment. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate. The 49-year-old female patient received first dose BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EK5730, Expiry Date: 31Mar2021), via an unspecified route of administration at left arm on 21Dec2020 at single dose for COVID-19 immunization. There were no concomitant medications nor medical history. Patient got first dose of the COVID vaccine and experienced her lips tingled/ tingling of the lips and her throat got tight, both on 21Dec2020, led to medically significant, lasted about 20 minutes. They observed her and she did not need any further treatment. Outcome of events was recovered in 21Dec2020.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of her lips tingled/ tingling of the lips and her throat got tight cannot be excluded, considering the plausible temporal relationship and the known adverse event (anaphylactic adverse reaction) profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918799-1	"disoriented; hit her head and cut herself; hit her head and cut herself; Passed out at night; This is a spontaneous report from a contactable consumer (patient). A 67-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via an unspecified route of administration on 23Dec2020 at single dose at left arm for COVID-19 immunization. Medical history included Atrial fibrillation/heart problems diagnosed prior to the vaccine, got the COVID virus on 18Nov2020, disoriented in Nov2020. Concomitant medications included her heart medication every day and vitamins, nothing out of the normal. Caller stated she had heart problems. The heart problems were diagnosed prior to the vaccine. Caller also stated that she got the COVID virus this year before the vaccine as well and she was off, of work for like a month. On 23Dec2020 she got the vaccine. Then on Thursday 24Dec2020 and Friday 25Dec2020 she had a reaction. She had passed out in the night, hit her head and cut herself, she was then disoriented for 1 full day. Caller stated that the last time she was disoriented like this was when she had the COVID Virus, because she had heart problems. Caller stated that she was fine now. Caller stated that she had been off, of work so much. The heart problem she had was Atrial Fibrillation. Caller clarified that she had the COVID virus this year in Nov2020, it was before thanksgiving, on 18Nov2020 she had the virus, then on 19Nov2020 she got tested and it was positive. She got the vaccine on the 23Dec2020 Wednesday then on 24Dec2020 at night she passed out and on 25Dec2020 she was disoriented all day. Investigation Assessment: No. On 24Dec2020 she was going to bathroom, and found herself on the floor, then the following day 25Dec2020 was when she was disoriented. She knew this because when she had the actual COVID virus previous in Nov2020 this happened previously. When queried outcome of being disoriented she stated that she still felt a little weird but if getting better very, very slow. The Second dose was schedule for 13Jan2021. Caller confirmed that she did have a Positive Test for Covid Previously. Her treatment at the time was in the Emergency Room, they gave her an Antibody infusion, she had to schedule it because it was actually a clinical trial. Caller was asked if she knew the name of covid test, she stated that she does not know, she only recalled that she opened her mouth and they test her that way. The outcome of the event ""disoriented"" was recovering, of the other events was unknown."	No current illness for this event.	No other medications for this event.

COVID19 (COVID-19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918967-1	she got the COVID 19 vaccine on the 16Dec2020 and got tested positive on the following day; she got the COVID 19 vaccine on the 16Dec2020 and got tested positive on the following day; This is a spontaneous report from a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs). A contactable nurse (patient) reported that a female patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 16Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient reported that she got the COVID 19 vaccine on the 16Dec2020 and got tested positive on the following day (17Dec2020). She is scheduled to take her second dose on 20Jan2021. The patient wanted to know what Pfizer recommendations are. Outcome of the event was unknown. That information on the lot/batch number has been requested.; Sender's Comments: A causal role of BNT162B2 would seem unlikely based on the temporal gap between the vaccination and the event onset.	No current illness for this event.	No other medications for this event.
COVID19 (COVID-19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918974-1	being tested positive; being tested positive; felt very sick; congestion; This is a spontaneous report from a contactable other healthcare professional (patient herself). A female patient of an unspecified age received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date not reported), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient felt very sick and that's not her normal. The patient felt great after getting the vaccine she hadn't felt that in a while. Today (23Dec2020) the patient had this congestion and 4 -5 people came back positive post covid-19 vaccination on unknown date. All of them sent home after being tested positive. The patient just someone to keep track, she just wanted Pfizer to know. She didn't have any problems, she was working COVID patients. They had a lot new cases. She just didn't feel 100%. The patient wanted to know if it's safe for her to get the second dose after being tested COVID positive post vaccination. The outcome of events was unknown.; Sender's Comments: The information available in this report is limited and does not allow a medically meaningful assessment of the case. The company cannot completely exclude a causal relationship between the reported events and vaccination with BNT162B2. Additional information regarding therapy vaccination date, lot number and investigation results will aid in comprehensive assessment of the case.	No current illness for this event.	No other medications for this event.
COVID19 (COVID-19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918975-1	she reported on 18Dec2020 got vaccine later that day tested positive; she reported on 18Dec2020 got vaccine later that day tested positive; This is a spontaneous report from a contactable nurse. A female patient of an unspecified age received the 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at single dose on 18Dec2020 for Covid-19 immunisation. The patient medical history and concomitant medications were not reported. She reported on 18Dec2020 got vaccine later that day tested positive with outcome of unknown. She asked can she still receive the 2nd dose of the vaccine or should she repeat the vaccination series. The patient underwent lab tests and procedures which included Sars-Cov-2 test: positive on 18Dec2020. Information on the lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID-19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918976-1	received the (1st dose of) COVID-19 vaccine 5 days ago and tested positive; received the (1st dose of) COVID-19 vaccine 5 days ago and tested positive; This is a spontaneous report from a contactable pharmacist. A patient of unspecified age and gender received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Device Type: Vial), intramuscularly on 18Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received the (1st dose of) COVID-19 vaccine 5 days ago and tested positive on 23Dec2020. PharmD asked if it's possible to administer Bamlanivimab to a patient who received the (1st dose of) COVID-19 vaccine 5 days ago and tested positive. Pharmacist mentioned that as Bamlanivimab was an EUA drug, they cannot go outside of the recommendations, and given that no information was available about its use after a dose of the COVID-19 vaccine, it is possible that Bamlanivimab may not be administered. Explained Pfizer MI is unable to provide a direct recommendation, was referred to the patient's Doctor for guidance: Before receiving the next dose of the COVID-19 vaccine, and to clarify if Bamlanivimab should be administered. The outcome of events was unknown. Information on the Lot/Batch number has been requested.; Sender's Comments: The reported tested positive 5 days after COVID-19 vaccine is considered related to the administration of BNT162B2.	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	918980-1	<p>guillain barre syndrome; stroke; left thigh burning; Left b/l gluteal burning/bilateral gluteal burning; paresthesia; mid back burning; right side burning / right thigh burning; b/l hand numbness/bilateral hand numbness; left facial numbness; b/l foot numbness/bilateral foot numbness; This is a spontaneous report from a contactable physician (patient). A 39-year-old male patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EK5730), via an unspecified route of administration on 19Dec2020 at single dose for prevention. Medical history included none. There were no concomitant medications. Caller states, he received the covid vaccine 19Dec2020 and on 25Dec2020 he was experiencing left facial numbness, b/l foot numbness, b/l hand numbness on 26Dec2020, right side burning on 28Dec2020. Today (29Dec2020) he has had left thigh burning, and Left b/l gluteal burning and paresthesia. No motor issues and no tendon issues, all intact. Also had mid back burning on 28Dec2020 that comes and goes. He has heard that there is a described neuropathy with the virus and/or with the vaccine and wants more information on that. Curious if anyone has anything similar? and makes mention of possible Giliian Barre Syndrome. States that he has had a potential reaction. He had his dose on 19Dec2020. On 25Dec2020 he developed left facial numbness, then later that day he developed bilateral foot numbness. On 26Dec2020, he developed bilateral hand numbness, on 28Dec2020 he developed right thigh burning, and today (29Dec2020) he has developed left thigh burning, and bilateral gluteal burning and paresthesia. States that he has been kind of freaking out about it. He doesn't have any motor issues. States that he heard that there is a described neuropathy with the virus, but not with the vaccine, is that true? The left facial numbness resolved on either 26Dec2020 or 27Dec2020. States that the symptoms were concerning because it could have been a stroke. States his symptoms were moderate. States that due to the bilateral foot and hand numbness, he had a LP. brain and spine MRI, and blood work done on 26Dec2020. All came back completely normal. When asked about causality, caller states that it makes the most sense for his symptoms to be caused by the vaccine due to his age and the fact that all his testing was completely normal. Reporter seriousness for left facial numbness, bilateral foot numbness, bilateral hand numbness, right thigh burning, left thigh burning and bilateral gluteal burning and paresthesia: Medically significant. The outcome of the event left facial numbness was recovered in Dec2020. The outcome of the events guillain barre syndrome, stroke and mid back burning was unknown. The outcome of the other events was not recovered.; Sender's Comments: Based on the temporal relationship the association between the reported serious adverse events with BNT162b2 can not be fully excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.</p>	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	919904-1	<p>tested positive for COVID19 via antigen test; tested positive for COVID19 via antigen test; having no sense of taste and smell; having no sense of taste and smell; fever; scratchy throat; This is a spontaneous report from a contactable nurse. A 26-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ168), via an unspecified route of administration on 21Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. After getting vaccinated, patient developed a fever on 22Dec2020. On 23Dec2020, the patient has no taste and smell and tested (used the Sofia test) positive for COVID. The patient was told to quarantine and take off work for 10 days. The patient has felt like she has had a scratchy throat. Patient has not taken her allegria. The outcome of events was unknown.; Sender's Comments: A causal role of BNT162B2 would seem unlikely based on the temporal gap between the vaccination and the event onset.</p>	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	919905-1	<p>"patient received the PFIZER-BIONTECH COVID-19 MRNA VACCINE and then tested positive for COVID; patient received the PFIZER-BIONTECH COVID-19 MRNA VACCINE and then tested positive for COVID; This is a spontaneous report from a contactable pharmacist. A 40-year-old female patient received the bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number and Expiration Date: Unknown), via an unspecified route of administration on 18Dec2020 at a single dose for COVID-19 immunization. The patient's medical history included high body mass index (BMI) from an unknown date and unknown if ongoing. Concomitant medications were not reported. On 22Dec2020, the patient received the PFIZER-BIONTECH COVID-19 MRNA VACCINE and then tested positive for COVID; and showed symptoms. The events were assessed as medically significant. The clinical course was reported as follows: The 40-year-old female patient, with comorbidities ""like high BMI"", received the Pfizer BioNTech COVID vaccine on 18Dec2020 and she had tested positive for COVID on 22Dec2020 and she was showing symptoms; however, they were not severe. The pharmacist did not describe the symptoms. In response to further probing, the pharmacist stated, ""can I do this tomorrow because I need to call patient and ask her about if they have an opinion regarding the monoclonal antibodies treatment."" The pharmacist wanted to know if there was information on consumers receiving antibodies after receiving the vaccine. The pharmacist stated the patient was eligible for antibody treatment. The patient underwent lab tests and procedures which included SARS-CoV-2 test: positive on 22Dec2020. The clinical outcome of the events was unknown. The batch/lot numbers for the vaccine, BNT162B2, were not provided and will be requested during follow up.; Sender's Comments: The reported tested positive for COVID after immunization with BNT162B2 is considered related to the administration of the suspect, BNT162B2."</p>	No current illness for this event. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	919906-1	tested positive for covid; tested positive for covid; coughing; congestion; could not sleep that night; her temperature is still low/temperature was lower around 96 or 97; fever; This is a spontaneous report from a contactable consumer (patient). A female patient of an unspecified age received first dose of BNT162B2 (Pfizer-BIONTECH Covid-19 Vaccine, lot number: EH9899), via an unspecified route of administration on 15Dec2020 at a single dose, for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received the Covid-19 shot 8 days ago on 15Dec2020. She tested positive for COVID on 23Dec2020. She worked in the emergency room, clarified she was a certified Nurse Assistant (CNA). She was hesitant about taking the COVID-19 vaccine. She was curious since she has been around the virus 24/7 since the pandemic started since she works in the emergency room. When she took the COVID-19 shot, stated she felt great the next day and could not sleep at night in Dec2020 which is not normal for her. It's nothing like the flu shot. It was strange since she has been around the virus all this time, she felt like she had COVID in Feb2020, but she was not tested then. She does not ever get sick and she was down for two days with a fever in Dec2020. After those two days, she always had a low-grade fever of 98 or 99 which was constant. After she took the COVID vaccine her temperature was normal, her temperature was lower around 96 or 97 in Dec2020. She woke up on 23Dec2020 and she had congestion and her temperature was still low. She went to work, and she was told she looked like she had no sleep. She was coughing 23Dec2020 morning, but she did not have any symptoms as far as temperature. She realized that the COVID 19 shot is only 50% effective. She is asking if she should get the second dose. The outcome of events was unknown.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	919907-1	30 mins after vaccination caller was notified patient tested positive for covid; 30 mins after vaccination caller was notified patient tested positive for covid; This is a spontaneous report from a contactable pharmacist. A patient of unspecified age and gender received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for immunization. The patient's medical history and concomitant medications were not reported. 30 mins after vaccination caller was notified patient tested positive for covid on an unspecified date with outcome of unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on the information currently available (30 mins after vaccination Covid test found positive), no effect of the suspect vaccine could be reasonably achieved to protect from the targeted infection/disease due to the very short time lag. Instead, the positive COVID represents the pre-existing infection prior to vaccine use. Further information like confirmative COVID 19 Nucleic acid/ PCR test together with any associated symptoms are needed for full medical assessment.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	919908-1	tested positive COVID; tested positive COVID; nasal congestion; loss of smell; This is a spontaneous report from a contactable physician (patient). A 46-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EK5730, Expiration Date Mar2021), via an unspecified route of administration in her right deltoid on 19Dec2020 at single dose for COVID-19 immunization. Medical history included ongoing Crohn's disease from 2007/ diagnosed at 33 years old. There were no other concomitant drugs. The doctor who received the COVID vaccine stated that she must have been exposed to the virus prior to receiving the vaccine because she became symptomatic 48 hours after getting the vaccine. She noted that on Pfizer website recommended that a person not get the vaccine until 6 weeks after active infection but she of course did not know she had been exposed and when her second dose was due, she would not be 6 weeks after active infections. The vaccine was received on 19Dec2020 and she tested positive on 22Dec2020. The only symptoms she had experienced after testing positive are nasal congestion and loss of smell and they started on 21Dec2020 in the morning. She had had no worsening of her Crohn's disease. The only testing she had had done was the PCR testing for COVID. No treatments for the symptoms at this point. The outcome of the events tested positive COVID was not recovered, while for other events was unknown.; Sender's Comments: A causal role of BNT162B2 would seem unlikely based on the temporal gap between the vaccination therapy and the event onset.	Crohn's disease (Verbatim: Crohn's disease/ diagnosed at 33 years old)	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	919910-1	positive for Covid with symptoms; positive for Covid with symptoms; positive for strep; positive for influenza; This is a spontaneous report from a contactable physician and nurse. A 68-year-old female patient received bnt162b2, via an unspecified route of administration on 17Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced positive for COVID with symptoms, positive for strep and positive for influenza in Dec2020. Additional Context: caller stated that she had a patient that got Covid vaccine on 17Dec2020 who was complaining of muscle aches, no fever, sudden loss of taste and smell in the last 24 hours, sore throat and a cough. Stated that she cannot attribute the cough to the vaccine. Stated that she was screened for COVID, strep and influenza. Stated that she was positive for covid and strep. Stated that she does not think that and wanted to know if the vaccine would cause a positive from a rapid test. Outcome of the events was unknown. The Lot/ Batch and expiry date has been requested.; Sender's Comments: The reported positive for COVID with symptoms after immunization with BNT162B2 is considered related to the suspect, BNT162B2.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	919954-1	"tested positive for Covid; tested positive for Covid; No symptoms at present time; This is a spontaneous report from a contactable nurse (patient). A 50-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EV1685) via an unspecified route of administration on 22Dec2020 at single dose for COVID-19 immunization. The patient's medical history included Covid-19 12 weeks before 25Dec2020. The concomitant drug was reported as levothyroxine sodium (SYNTHROID), hydrochlorothiazide and vitamins. The patient got the vaccine (Covid 19 Vaccine) on 22Dec2020 (Tuesday) and then on 25Dec2020 (today) had to be tested at work and was tested positive for Covid. So, she was wondering if that might have something to do with the vaccine or it was not for sure. Patient had already had Covid once and this is the first time she got tested since for 12 weeks. It just happened to be three days after the vaccine. So, the lady she work with told her a study was done and people were shown to test positive like two days after they got the vaccine. So, that's what she wanted to find out. If that could be."" She states the test on 25Dec2020 was a routine follow up Covid-19 test. No symptoms at present time. The outcome of the events was unknown.; Sender's Comments: BNT162b2 provides protection against COVID-19 after 7 days from the second dose. This case does not match this condition."	No current illness for this event.	; SYNTHROID
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	919972-1	received the vaccine on Friday and tested positive; received the vaccine on Friday and tested positive; This is a spontaneous report from a Pfizer-sponsored program Pfizer First Connect from a contactable other healthcare professional. A 27-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date not reported), via an unspecified route of administration in Dec2020 (reported as on Friday) at single dose for COVID-19 immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient received the vaccine on Friday and tested positive today 26Dec2020. The outcome of event was unknown. Information about batch/lot number has been requested.; Sender's Comments: Based on the information available, a possible contributory role of the suspect BNT162B2 cannot be excluded for the reported event COVID-19 virus test positive based on the known safety profile.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	919984-1	tested positive for COVID with symptoms such as nasal congestion, sore throat, weakness, and flu-like symptoms; tested positive for COVID with symptoms such as nasal congestion, sore throat, weakness, and flu-like symptoms; This is a spontaneous report from a contactable physician (patient). A 46-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number EJ1685), via an unspecified route of administration on 20Dec2020 at single dose for covid-19 immunization. Vaccine location was left detoid. The facility type vaccine was hospital. Medical history included polycystic ovarian diseases from an unknown date. Concomitant medication included metformin, omeprazole, apremilast (OTEZLA). Patient stated she got the vaccine on the 18th. She took the vaccine on 20Dec2020. Yesterday (25Dec2020) she started to feeling sick and today (26Dec2020) patient got tested and she have Covid. She reported to have tested positive for COVID today (25Dec2020) with symptoms such as nasal congestion, sore throat, weakness, and flu-like symptoms yesterday at around 4:00pm. This was the first time she has taken the Covid test. The physician stated she didn't know the causality between the event and vaccine. The action taken in response to the events for BNT162B2 was not applicable. The outcome of events was unknown.; Sender's Comments: Based on the information available, a possible contributory role of the suspect BNT162B2 cannot be excluded for the reported event positive test for COVID based on the known safety profile. However the short duration of 5 days since the vaccine first dose is given it is unlikely patient would have fully developed immunity.	No current illness for this event.	; OTEZLA
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	919989-1	Got vaccinated and contracted COVID the following week; Got vaccinated and contracted COVID the following week; This is a spontaneous report from a contactable consumer (patient). A patient of unspecified age and gender received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number unknown as the reporter did not have any of that information at the moment of reporting), via an unspecified route of administration on 15Dec2020 at single dose for COVID-19 vaccination. The patient's medical history and concomitant medications were not reported. It was reported that the patient got vaccinated on December 15th and contracted COVID the following week (Dec2020). Treatment included regeneron infusion last night (24Dec2020). Patient was wondering if zinc supplements should be taken or how to handle own's immune system because the patient had the first immunization. The outcome of the event was unknown. COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	919995-1	had a testing, came up positive; had a testing, came up positive/sporadic coughing and a little short of breath. Maybe a little sore throat; This is a spontaneous report from a contactable consumer. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EJ1685), via an unspecified route of administration on 20Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received Pfizer COVID Vaccine (further clarified) on 20Dec2020. And maybe two days after that, the patient kind of developed a little like very sporadic coughing, it was very mild and a little short of breath. Maybe a little sore throat so that's why the patient was concerned. The patient had a testing in Dec2020, they did swab the patient's throat, it came up positive. The outcome of events was unknown.	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920000-1	<p>Very tired; Cold/head cold; upset stomach; she was not feeling well; it got her all congested and she got the head cold in Dec2020; little whooping cough; I had severe headaches and it was just too uncomfortable; my head was so congested; worst headache; it was just too uncomfortable; This is a spontaneous report from a contactable consumer(patient). A 59-year-old female patient received BNT162B2 via an unspecified route of administration on 22Dec2020 at the 59-year-old at single dose for Covid virus. The medical history included Congested, head cold and Covid virus. There was no concomitant medication. The patient work at a hospital and she went for a Covid shot (clarified as Covid 19 vaccine) on 22Dec2020 and she got a very bad reaction from it which bothered her, she had severe headaches in Dec2020 and it was just too uncomfortable and on 24th she was very tired, she didn't had too much of upset stomach in Dec2020 but it was not all that bad by 9 in the clock by morning she was at work and everything and she was told by if she was not feeling well she can walk by a day, but her question and her concern was back on November okay she had called in sick around, she had a funeral that she gone too and people that were at the funeral, unfortunately were smoking outside and smoke bothers me very much, she got congested and she get head cold from it you know and I was thinking it's nothing it's just a cold and somebody told her no (name) you better go get yourself to the employee health office and get checked out and she didn't bother doing that, she said no it's just the cold she will be fine but then it just got worse down the road and she said to herself may be she better just to say she did it, so she called in sick on 24th because she had the cold still and she called and she went to employee health office on 25th she still had the headache and she still had the cold, however when she went to the health office they said to her well stay out of work and we will get back in touch with her and she said okay and she will do that so when they got back in touch with her they said they do have the Covid and she said ohhh she said okay so she stayed out of work and she went to work on the 07Dec so she was wondering whole time, so her confusion was this she was told if you already had the virus in her which at that time, she did not know what it was she just thought it was from cigarette smoke because it got her all congested and she got the head cold in Dec2020 and the whole thing that went along with it and the health employee officer know you had the virus and it's just the virus and she go oh great and that's when they told her to stay out of work and she said okay fine then she just have to that, so in the meantime everybody in the work said hi calling me checking up on her and she said it's so nice of you people, she appreciate it but then she went back to work she was still feeling you know much better than she was but she had little whooping cough in Dec2020 but that was not really that bad, so they said you going to get the shot or not, and she said she don't know she kind of debatable, she don't know if she should get it, because she work in the hospital or she should not get, she said she don't know she was kind of up and some people like she get it sometime your health was not that good but on the other hand everybody that is working here in the hospital working with patients because was work right in the ICU, all over the floor you know spreading right there so she said oh alright so she kicked myself and said go get the shot, get it just over with and get it out of here so that is when she took her shot that was on 22nd and on 24th she was very tired all day no she was tired all day but she was kind of dragging most of the day but she had on the 20th no that was fine on the 20th okay for some reason she guess it was after work that week on 19th, she came home and her head was so congested and she had the worst headache and she felt like a wand had hit her over the head, it was horrible and all she could smell was cigarette smoke, like is her neighbor smoking here so she went down the hall because in live in building that used to be hotel but now they turned that into Condominium and she walk up and down the hall and she was like was somebody smoking or why this or why smell this so strong and the all the lights off in a hallway and she don't want to offend anybody but they had to go to work and somebody elsewhere and she am like she can't stand this smell and they gave this shot and she went for this shot, and they told us to come back she think it was a week or something like that to get the second shot, and she am saying if this going to cost her going to feel this way again, she don't want to get the second shot, she told them that and they told her to call this number and talk to them.The only reason she got it because they encouraged to get it. Even though she had the Covid virus, people said if you already have the virus you don't need to get a shot but people were encouraging because that's she thought well she guess she will get it. But she was mad that she got because it made her sick in Dec2020. And because we already got it they want us to go back and get the second shot and what she was m trying to say to you is, without take and hour 3 hour of conversation here she just want to say she don't want to get back and get the second shot and if it is okay by you guys somehow send her a letter or whatever it is, whoever she have to talk to because she don't want to go back and get the second shot just because of getting sick. She took Excedrin because that works for my headache. She didn't understand why you need all this information history with all this when all she want to say was she didn't want to get a second shot. The outcome of events Head cold and Headache was not recovered, the other events was unknown. Information on the lot/batch number has been requested.</p>	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920037-1	positive COVID-19 test with symptoms; positive COVID-19 test with symptoms; This is a spontaneous report from a contactable nurse, who is also the patient. This 31-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration in Dec2020 at single dose for COVID-19 immunisation. Relevant medical history and concomitant medications were not reported. The reporting nurse stated that she received her first dose of the COVID-19 vaccine on Saturday (e.g. Dec2020). She had taken a PCR test on Thursday and received a negative result on Saturday, the same day she received her vaccination. She reported developing a fever on Monday night and testing positive for COVID-19 on Tuesday. At the time of the report, the outcome of the events was unknown. The information about lot/batch number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with the suspect vaccine BNT162B2 in this patient cannot be completely excluded. More information such as laboratory findings on viral nucleic acid /PCR test needed for meaningful medical assessment.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920043-1	All of a sudden I did not have any taste or smell; All of a sudden I did not have any taste or smell; Tested positive; Tested positive; This is a spontaneous report from a contactable nurse reported for herself. A 29-year-old female patient received bnt162b2 ((PFIZER-BIONTECH COVID-19 VACCINE, batch/vet EH9899), via an unspecified route of administration on 22Dec2020 at single dose for covid-19 immunisation. Medical history included seasonal allergy. Concomitant medication included cetirizine hydrochloride (ZYRTEC [CETIRIZINE HYDROCHLORIDE]). The patient was taking a multivitamin a day. The patient experienced typical symptoms no taste, smell on 22Dec2020. Slight tingling, body aches, chills, all the other symptoms for Covid and now positive for Covid in Dec2020. Outcome of events was unknown.; Sender's Comments: Based on the information available, a possible contributory role of the suspect BNT162B2 cannot be excluded for the reported event positive for Covid based on the known safety profile.	No current illness for this event.	ZYRTEC [CETIRIZINE HYDROCHLORIDE]
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920059-1	"I am not feeling well; had a Covid PCR done swapped on yesterday and I am Covid positive; had a Covid PCR done swapped on yesterday and I am Covid positive; This is a spontaneous report from a contactable nurse. This nurse reported for herself that the 35-year-old female patient who received bnt162b2 (BNT162B2) via unknown route of administration on 23Dec2020 at single dose for covid-19 immunisation. Medical history was none. Concomitant medications were none. Nurse stated, ""I received the Pfizer Vaccine this Wednesday and right before getting the vaccine, I had a Covid test (captured as per verbatim) on before the vaccine on Tuesday (22Dec2020) was negative. I had a Covid PCR done swapped on yesterday (25Dec2020) and I am Covid positive. So I have the vaccine and I am Covid positive"" Nurse stated ""It's ""140"" ""130"" pounds (further bot clarified)."" The patient was not feeling well. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on the limited available information, the company considers that a causal relationship between the SARS-CoV-2 test positive and vaccination with BNT162B2 cannot be excluded."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920066-1	positive with Covid; having Covid symptoms; positive with Covid; having Covid symptoms; This is a spontaneous report from a contactable nurse. A 54-year-old female patient (mother) received BNT162B2 (Batch/lot number: EK5730), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunisation. Medical history included asthma. Concomitant medications were not reported. Patient got the vaccine administered on 18Dec2020 and after that she was diagnosed positive with Covid on 24Dec2020, so now she was having Covid symptoms obviously after the vaccine but like not due to the vaccine. Reporter was just concerned what her next dose supposed to be scheduled for 08Jan2021, was she still supposed to get the second dose or what. No treatment received. Patient was just taking vitamins. Reporter also reported that typically it was not supposed to be but was trying to get the information on enhanced immune response. Outcome of the event was unknown.; Sender's Comments: The reported positive with Covid after COVID-19 immunization is considered ineffective of BNT162B2, and the Company cannot completely exclude the possible causality between the reported event and BNT162B2 administration.	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920090-1	<p>sinus issues; positive COVID-19 test with symptoms; positive COVID-19 test with symptoms; right arm sore; This is a spontaneous report from a Pfizer Sponsored Program. A contactable consumer (patient) reported that a 58-year-old male patient received the first dose of BNT162B2 (lot number: EH9899; Expire Date: 31Mar2021), via an unspecified route of administration, in arm, right upper, on 16Dec2020 11:10 AM at single dose for COVID-19 immunization. The vaccination facility type was hospital. The vaccine was not administered at military facility. Patient's medical history (including any illness at time of vaccination) was none. The patient got ill from all pain medications- from prescription strength pain killers to OTC products such as tylenol, ibuprofen and aspirin. All of them make him sick- experienced hot flashes and nausea. No additional vaccines administered on same date of the Pfizer suspect vaccine. Prior vaccinations (within 4 weeks) was none. The concomitant medication included 2 different blood pressure pills, mentioning Lisinopril, but stated he did not think his blood pressure pills were relevant to what he was experiencing with the COVID-19 Vaccine. A MRI tech (clarified by caller as MRI technologist) at a hospital who received the COVID-19 Vaccine on 16Dec2020 (caller clarified he received the vaccine at 11:10 AM on 16Dec2020). Caller stated on 17Dec2020 he had signs of aches and pains all over, a sore arm (clarified as his right arm), no fever. He also experienced sinus issues and a loss of sense of smell. Clarified his right arm was sore for only a day, his sinus issues started on 20Dec2020, and his loss of the sense of smell gradually started on 22Dec2020. He stated on 23Dec2020 he had a COVID-19 test performed and the test result was positive for the COVID-19 virus. Caller asked since he had the first COVID-19 Vaccine dose, and has now tested positive for the COVID-19 virus, should he get the second COVID-19 Vaccine dose scheduled for 06Jan2021. Patient's Height: 5' 8" as provided by caller, who stated he has shrunk 1". No further details provided. Patient's Weight: 169 lbs. as provided by caller, who stated his weight was as of today. Reported he worked an overnight shift, clarifying he was injected with the COVID-19 Vaccine after his overnight shift was finished on the morning of 16Dec2020. He stated he came back to work later in the day on 16Dec2020 to work another overnight shift from 9:00 PM to 7:30AM. He said after he finished is overnight shift on the morning of 17Dec2020, he went home to bed, and woke up around 12:00 PM on 17Dec2020. He said when he woke up, he started to feel aches and pains all over, and after that noticed he was getting chills periodically. Clarified he experienced the aches and pains all over for a couple of days, and then the aches and pains went away. He said he then started to get the feeling a sinus infection was coming on, but he never got a sinus infection. He said the aches, pains, and chills came back. Reported his co-worker received the COVID-19 Vaccine on Saturday, 19Dec2020, clarifying his co-worker did well with the COVID-19 Vaccine. He clarified his employer was concerned that he may have exposed his co-worker to COVID-19 when the two worked together on the overnight shift of 22Dec2020. He said both he and his coworker kept their PPE on the whole time they worked except when the two ate dinner. He said the two of them sat at a round table about 6 feet apart, and took off their masks to eat. He said his partner agreed that the two of them were right at 6 feet apart when the sat at the table to eat dinner, so their employer deemed his coworker as low risk. Reported on 22Dec2020 he had to go back to work, so he was asked for his temperature at the time, which was 98.8 degrees. He did have a flu shot previously. He was instructed as long as he doesn't have a fever over 100 degrees, he can work. The caller said he went to work on 22Dec2020, and read an email from his employer's wellness office. He said the wellness office email spoke about the COVID-19 Vaccine side effects, and instructed employees to contact the wellness office with any COVID-19 Vaccine side effects experienced. He said he left a voicemail with his employer's wellness office explaining exactly what his COVID-19 Vaccine side effects were. He said he instructed his employer's wellness office call him in the afternoon because he was going to go home, go to bed, and wake up at noon on 23Dec2020. He stated he spoke with his employer's wellness office at around 11:30 AM on 23Dec2020, and the wellness office asked for him to go to the hospital, and have a COVID19 test. Caller stated his employer performed a COVID-19 nasal swab test, and on 24Dec2020, he was told he was COVID-19 positive. He said his employer backed up his quarantine start date to 17Dec2020 (the first day he experienced symptoms), and had him follow a 10-day quarantine until 27Dec2020. He stated today, 28Dec2020, was the first day he has been off quarantine. Reported he was not saying he got COVID-19 from receiving the COVID-19 Vaccine, but should he have the second COVID-19 Vaccine injection. Clarified his symptoms were intermittent, and started coming back around 20Dec2020. Reported he was not experiencing any scratchiness in his throat, and his eyes were not watering. He said he has had no cough, no sneezing, and no trouble breathing. He said in general, it felt like something was coming on, saying it was building up, but not getting out. Clarified he had gone back to work on 23Dec2020 to have his COVID-19 nasal swab test performed, and was told by his employer on 24Dec2020 that the COVID-19 nasal swab test was positive. No AE required a visit to emergency room or physician office. The outcome of the event right arm sore was recovered on 18Dec2020 and the other events was unknown.</p>	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920105-1	<p>patient had COVID two days after vaccination; This is a spontaneous report from a non-contactable consumer. Medical history and concomitant medications were not reported. The patient had COVID two days after vaccination (28Dec2020). The outcome of the event was unknown. No follow-up attempts are possible, information about lot/batch number cannot be obtained.</p>	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920108-1	four days after getting her first COVID vaccine injection, she had a COVID positive test result (antigen rapid response test); four days after getting her first COVID vaccine injection, she had a COVID positive test result (antigen rapid response test); This is a spontaneous report from a contactable consumer. A 29-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EK5730/expiration date unknown), dose number 1 via an unspecified route of administration on 23Dec2020 09:00 at a single dose on the left arm for COVID-19 immunization. Medical history included vaccination of unspecified flu vaccine in Oct2020. No vaccines or new medications were received on the day of the vaccination. The patient stated that on 27Dec2020, four days after getting her first COVID vaccine injection, she had a COVID positive test result (antigen rapid response test). The patient stated that she had been mostly asymptomatic for COVID. The outcome of the events was unknown.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920121-1	angioedema; swelling of the lips; This is a spontaneous report from a non-contactable nurse (patient). A 45-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on an unspecified date at a single dose as COVID-19 vaccine. Medical history included angioedema 23 years ago. Concomitant medications were not reported. The caller wanted to report AE for the COVID-19 vaccine. AE reported that she took the COVID-19 vaccine and after 23 hours, she developed angioedema on unspecified date. Additionally, she said that she woke up with swelling of the lips on an unspecified date. Given the AE from the first request, it was inquired if it was recommended to get a second dose. The outcome of the events was unknown. No follow-up attempts are possible. Information about lot/batch number cannot be obtained.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of angioedema with lip swelling cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920122-1	she had a rapid test performed which indicated a positive test result; she had a rapid test performed which indicated a positive test result; This is a spontaneous report from a contactable nurse (patient). A female patient of unspecified age received the first dose of BNT162B2, via an unspecified route of administration on 18Dec2020 at a single dose for immunization. The patient's medical history and concomitant medications were not reported. The patient indicated she received the first dose of the vaccine on the 18th and due to a family member testing positive, she had a SARS-CoV-2 rapid test performed in Dec2020 which indicated a positive test result. Her employment was questioning as to whether this is due to her receipt of vaccine. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: The reported information is limited. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920123-1	resident (patient) tested positive for COVID, 10 days after the first dose of COVID vaccine; resident (patient) tested positive for COVID, 10 days after the first dose of COVID vaccine; This is a spontaneous report from a contactable physician via a Pfizer sponsored program Pfizer First Connect. A 29-year-old female patient received their first dose of BNT162B2 (lot number and expiry date not reported), via an unspecified route of administration on 17Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The reporter wanted to know how long they have to wait for the second dose of the COVID vaccine as her resident (patient) tested positive for COVID on 27Dec2020, 10 days after the first dose of COVID vaccine given to her on the 17Dec2020. The patient underwent lab tests and procedures which included SARS-CoV-2 test: positive on 27Dec2020. The outcome of the events was unknown. Information on the lot/ batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of subject vaccine cannot be excluded for the reported events of LOE and SARS-CoV-2 test positive, based on temporal relationship. There is very limited information provided in this report. This case will be reassessed upon receipt of follow-up information.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920126-1	tested positive for COVID-19; was given the first COVID-19 dose. After some time, the employee got symptomatic and was tested positive for COVID-19; This is a spontaneous report from a contactable pharmacist. A patient of unspecified age and gender received the first dose of bnt162b2, via an unspecified route of administration on an unspecified date at a single dose for Covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient who is employed in a hospital tested negative for COVID-19 then was given the first COVID-19 dose. After some time, the patient got symptomatic and was tested positive for COVID-19. The outcome of the events was unknown. Information on the lot/ batch number has been requested.; Sender's Comments: The reported information is limited. The case will be reassessed upon receipt of follow up information. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920127-1	Angioedema of lips, throat, eyes, hands. Flushing of hands; Angioedema of lips, throat, eyes, hands. Flushing of hands; Dizziness; Fatigue; Legs became heavy; Joint stiffness of hands; This is a spontaneous report from a contactable healthcare professional (patient). A 36-year-old female patient received the first dose of BNT162B2 (Pfizer-BIONTECH Covid-19 Vaccine; Lot number: EJ 1685), intramuscular on the left arm on 23Dec2020 at 06:30 AM in a hospital at a single dose for COVID-19 immunization. Medical history included known allergies of seasonal allergies, cats, and metals; migraines, chronic idiopathic urticaria, and angioedema. The patient was not pregnant and did not have any other vaccine in four weeks. The patient did not have COVID prior to the vaccination and did not test positive to COVID post vaccination (also reported as not been tested for COVID-19 after the vaccination). Concomitant medication included propranolol, cetirizine hydrochloride (ZYRTEC), and sertraline (reported as other medications in two weeks). On 23Dec2020 at 06:45 AM, the patient experienced immediate symptoms of angioedema of lips, throat, eyes, hands; flushing of hands, dizziness, fatigue, legs became heavy, and joint stiffness of hands. She was monitored by colleagues for an hour, prescription for Epi pen refilled, and available angioedema and fatigue persisted for three days. It was reported that the patient was not treated for the adverse events but it was also reported that the AE treatment also included X-ray and antibiotic. Outcome of the events was recovered in Dec2020.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of immediate symptoms of angioedema of lips, throat, eyes, hands; flushing of hands, dizziness, fatigue, legs became heavy, and joint stiffness of hands cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate	No current illness for this event.	; ZYRTEC [CETIRIZINE HYDROCHLORIDE];
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920142-1	tested positive for the COVID virus/she was having a symptom, she lost her sense of smell; tested positive for the COVID virus/she was having a symptom, she lost her sense of smell; sinus infection; tested positive for the COVID virus/she was having a symptom, she lost her sense of smell; Her nose being stuffed; tension headache on the back of head; her deltoid was hurting for 24 hours; active infection after getting the first dose; This is a spontaneous report from a contactable pharmacist (patient). A 37-year-old female patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on the right deltoid on 18Dec2020 at single dose for COVID-19 immunization. Medical history reported as none. There were no concomitant medications. The patient had active infection after getting the first dose, consult if it was still recommended to get the second dose next week or she should be delaying getting the second dose. The patient got the COVID vaccine on the 18Dec2020. Then on the 24Dec2020 she tested positive for the COVID virus. She was due to get the second vaccine on 08Jan2021. She was asking should she still get the 2nd dose of the vaccine since came up positive. The patient was having a symptom, she lost her sense of smell on 22Dec2020. She lost her sense of smell on the evening on 22Dec2020, it still had not come back at all. She did have sense of taste on the tongue. She thought it was sinus infection, because her head didn't hurt and she was not stuffed anymore. She stated that after the vaccine, she had a tension headache on the back of head, and her deltoid was hurting for 24 hours. Her headache started the same day in the evening, went on till lunch time next day. Her nose being stuffed which she thought was a sinus infection started on Tuesday 22Dec2020, it was more located in the front middle of her forehead. Her nose being stuffed which she thought was a sinus infection started on Tuesday 22Dec2020, it was more located in the front middle of her forehead. She did not have her Card to provide Lot and Expiry, it was at work at the hospital. She was administered the vaccine on the right deltoid, since she didn't want to sleep on it. Prior to vaccine she has had no positive test for Covid. Caller stated that this was super unfortunately coincidental. She had had no antibody test. She had no reactions to vaccines in the past. Test: Respiratory Panel, Result: Negative on unknown date. The outcome of events drug ineffective, COVID-19 and sinus infection was not recovered. The outcome of event tension headache and muscle pain was recovered in Dec2020. The outcome of rest events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of subject vaccine cannot be excluded for the reported events of LOE, COVID 19 and other events, based on temporal relationship. There is very limited information provided in this report. This case will be reassessed upon receipt of follow-up information.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920146-1	tested positive; tested positive; Symptoms experiencing include having no taste, smell and slight bodyache; Symptoms experiencing include having no taste, smell and slight bodyache; Symptoms experiencing include having no taste, smell and slight bodyache; This is a spontaneous report from a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs). A contactable other-healthcare professional (patient) reported that a female patient of an unspecified age received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 17Dec2020 at single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient was tested positive on 24Dec2020, and symptoms experiencing include having no taste, smell and slight body ache in Dec2020. The patient asked if she could get the second dose. The outcome of the events was unknown. Information about the Lot/batch number has been requested.; Sender's Comments: Based on the limited available information, the company considers that a causal relationship between the COVID-19, with symptoms of having no taste, smell and slight body ache, and vaccination with BNT162B2 cannot be excluded.	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920149-1	Positive rapid test and PCR test after 1st vaccination; Positive rapid test and PCR test after 1st vaccination; This is a spontaneous report from a contactable nurse reporting for her/himself. A patient of unspecified age and gender received the 1st dose of bnt162b2 (BNT162B2), via an unspecified route of administration, on 15Dec2020, at single dose, for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient tested positive on 27Dec2020 on a rapid test and on 28Dec2020 on a respiratory panel by PCR. Next dose was scheduled on 05Jan2021. The information on the lot/batch number has been requested.; Sender's Comments: Based on the information available, a possible contributory role of the suspect BNT162B2 cannot be excluded for the reported event. Positive rapid test and PCR test based on the known safety profile. However the short duration of 12 days since the vaccine first dose is given it is unlikely patient would have fully developed immunity.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920151-1	tested positive for coronavirus; tested positive for coronavirus; This is a spontaneous report from a contactable physician (patient). A female patient of an unspecified age received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 22Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced tested positive for coronavirus on 24Dec2020. The patient worked in a hospital. She got the first dose of Pfizer coronavirus vaccine on Tuesday, 22Dec2020. She tested positive for coronavirus on Thursday 24Dec2020 after exposure to patients and staff. She had mild symptoms. Her 2nd dose was scheduled for 12Jan2021. The patient was inquiry whether she should receive it, or should she take an antibody test first, but it would be less than 3 weeks from the onset of illness. The outcome of event was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on the information available, a possible contributory role of the suspect BNT162B2 cannot be excluded for the reported event tested positive for coronavirus based on the known safety profile. However the short duration of 2 days since the vaccine first dose is given it is unlikely patient would have fully developed immunity.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920156-1	"tested positive for covid; tested positive for covid; This is a spontaneous report from a Pfizer-sponsored program Pfizer First Connect. A contactable Pharmacist reported similar events for 2 patients. This is the first of two reports. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 14Dec2020 at single dose for covid-19 immunization. The patient medical history and concomitant medications were not reported. Caller is a pharmacist asked if there is a contraindication for administering antibody therapy to a person after they have received the first dose of the covid vaccine. He reported that there are 2 patients that received the covid vaccine the week of 14Dec and subsequently tested positive for covid on the 23rd and 24th of December. He was trying to determine the safety of administering antibody therapy for those patients even though they already got the first vaccine dose. He reported this question has some urgency and needed the information within 48 hours. Attempted to warm transfer but caller reported that he does not have any patient specific information or identifiers at this time. Escalating Urgently for additional research. Outcome of event was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on the limited available information, the company considers that a causal relationship between the event ""tested positive for COVID"" and vaccination with BNT162B2 cannot be excluded..Linked Report(s) : US-PFIZER INC-2020516661 same reporter/ drug/ AE, different patient"	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920162-1	High fevers (103/104 degree F) with chills for five days followed by low fevers (upto 101) for another six days and still ongoing; High fevers (103/104 degree F) with chills for five days followed by low fevers (upto 101) for another six days and still ongoing; headaches; fatigue; This is a spontaneous report from a contactable physician, the patient. A 49-year-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: UNKNOWN), via an unspecified route of administration in the left arm on 18Dec2020 at 15:15 (at 49-years-old) as a single dose for COVID-19 immunization. Medical history included severe iron deficiency, hypothyroidism, osteoporosis, and low baseline IgM antibodies levels (unknown cause). The patient did not have any allergies to medications, food, or other products. Concomitant medications included gabapentin (MANUFACTURER UNKNOWN), iron (MANUFACTURER UNKNOWN), calcium (MANUFACTURER UNKNOWN), and biotin (MANUFACTURER UNKNOWN). The patient did not receive any other vaccines within four weeks prior to the vaccination. On 19Dec2020 at 18:00, the patient experienced high fevers (103/104 degrees Fahrenheit) with chills for five days followed by low fevers (up to 101 degrees Fahrenheit) for another six days, headaches, and fatigue; all reported as non-serious. On 24Dec2020, the patient had a post vaccination nasal swab rapid antigen test and SARS-CoV-2 PCR test with negative results. The patient took paracetamol (TYLENOL) and ibuprofen (ADVIL) for treatment for the events. The clinical outcomes of the fever, chills, headaches, and fatigue were recovering. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.; Sender's Comments: Based on the compatible temporal association and the drug's known safety profile, the vaccination with BNT162B2 might play a contributory role in triggering the onset of high fevers with chills. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	;;;

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920959-1	Had a rapid test for COVID, and it was positive; Had a rapid test for COVID, and it was positive; This is a spontaneous report from a contactable pharmacist. A male patient of an unspecified age started to receive BNT162B2 (lot number unknown), via an unspecified route of administration from an unspecified date to an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The pharmacist stated that they have vaccinated all their caregivers, and a physician (patient) who got the vaccine, called and reported to her that he had a rapid test for COVID, and it was positive. She is wondering if there was any data from the clinical trials where people tested positive after having the vaccine. The patient is now freaking out because he does not know if he needs to go to the hospital and get treatment for COVID. He works night shift and may have been exposed to COVID, but now she does not know how to guide him. The outcome of the events was unknown. The following information on the batch number has been requested.; Sender's Comments: The reported positive rapid test for COVID after COVID-19 immunization is considered related to the administration of BNT162B2.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920960-1	"Systemic pruritis (itching) all over body; COVID test type: Nasal Swab and Rapid Antigen and were both positive; COVID test type: Nasal Swab and Rapid Antigen and were both positive; This is a spontaneous report from a contactable nurse (patient). A 25-year-old female patient started to receive BNT162B2 (lot number: EJ1685), intramuscular on 17Dec2020 16:30 at single dose in the left arm for COVID-19 immunization. Medical history included hypothyroidism from an unknown date. The patient was not pregnant at the time of vaccination. Concomitant medication included levothyroxine sodium (SYNTHROID) and spirinolactone. The patient previously took cefprozil (CEFZIL) and tapazole and both experienced allergies. The patient experienced systemic pruritis (itching) all over body on 22Dec2020 10:00. The patient was not diagnosed with COVID-19 prior to vaccination and since the vaccination, the patient has been tested for COVID-19. On 22Dec2020, the patient took COVID test type: Nasal Swab and Rapid Antigen and were both positive. No treatment received for the event ""Systemic pruritis (itching) all over body"". The outcome of the event ""Systemic pruritis (itching) all over body"" was not recovered. The outcome of the other events was unknown.; Sender's Comments: BNT162b2 provides protection against COVID-19 after 7 days from the second dose. This case does not match this codition"	No current illness for this event.	SYNTHROID; SPIROLACTONE
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920964-1	tested positive for covid19/diagnosed with Covid; tested positive for covid19/diagnosed with Covid; she had SOB the day of her first vaccination; I am very sick; I feel bad; This is a spontaneous report from a contactable consumer (patient). A female patient of an unspecified age received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 21Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient got the first dose of COVID-19 vaccine on Monday, 21Dec2020 and then was diagnosed with COVID-19 on 23Dec2020. Added that she was very sick and wondering if he'll get her second dose or not. The patient feel bad and is due for her second dose on 11Jan2021. The patient also reported that she had shortness of breath (SOB) the day of her first vaccination on 21Dec2020 and then tested positive for COVID-19 later. She posits she may have received the vaccine when she had an active COVID-19 infection. She is wondering if she can still get her second vaccination. Outcome of the events was unknown.	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920968-1	<p>It looks like one of the ingredients may have an animal cell lipid; Syncope; Dizziness; feeling faint; like going to pass out now and then; overall achiness, severe headaches, fever; overall achiness, severe headaches, fever; overall achiness, severe headaches, fever; This is a spontaneous report from a contactable nurse reporting for herself. This A 30-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Lot # EH9899), intramuscular at single dose in the left arm on 22Dec2020 09:00 for covid-19 immunisation. Medical history included reaction to pork, porcine and/or if she ever was exposed to exposed to heparin. There were no concomitant medications. On 23Dec2020, the patient experienced syncope (medically significant), dizziness (medically significant), feeling faint; like going to pass out now and then (medically significant), overall achiness, severe headaches, fever. The outcome of the events syncope, dizziness, feeling faint; like going to pass out now was recovering and outcome of overall achiness, severe headaches, fever was recovered on 24Dec2020. The patient ask: are there any animal products, pork gelatin or a lipid form of that contain in the vaccine? The events were described as follows: She experienced a significant amount of syncope and dizziness, for greater than 4 or 5 days post-receiving the vaccination. Also feeling faint like she is going to pass out every now and then. Has a more important question, wondering along with the doctors if one of the ingredients may have an animal product, like pork gelatin or a lipid form of that. It looks like one of the ingredients may have an animal cell lipid and was wondering if she was having a reaction to that. Declines to provide primary care provider details. States she received this first dose at occupational health in her workplace. Received the vaccine on the 22Dec2020 at 9am. 24 hours post vaccination, 1 day after, the syncope, dizziness, feeling faint started. Also the other symptoms, overall achiness, severe headaches, and fever were also experienced, but they stopped after that 24 hours. Those were expected since it was listed as side effects that popped up, so she expected those and they stopped after 24 hours. The syncope, dizziness, and faint feeling are not any worse and are very slowly improving, but she still has it and had to call out of work today because of it. That's consistent. Mentions it takes her a while to get down the stairs when getting product details for the COVID-19 vaccine. Unable to provide the vaccine NDC or expiry, or dose. Did not have any other vaccines at time of this one and none 4 weeks prior. Had to call a (company withheld) doctor and has to go to occupational health tomorrow to be seen. Declines having COVID virus. No further details provided.; Sender's Comments: Based on the compatible time association, the events syncope and dizziness are possibly related to suspect BNT162B2 administration. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p>	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920970-1	<p>positive COVID-19 antigen test with symptoms (ache, cough, fever); positive COVID-19 antigen test with symptoms (ache, cough, fever); This is a spontaneous report from a contactable physician (patient). A 51-year-old male patient received the first dose bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EH9899), via an unspecified route of administration on 17Dec2020 at 10:30 at single dose in left arm for covid-19 immunization. Medical history included borderline diabetes, ongoing hypertension, ongoing hyperlipidemia, ongoing rhinitis allergic, and currently ill. Concomitant medication included ongoing fexofenadine hydrochloride (ALLEGRA, strength: 180 mg) at 180mg once daily by mouth for Rhinitis allergic taking for years, ongoing lisinopril (strength: 40 mg) at 40 mg once daily by mouth for hypertension taking for two or three years, ongoing atorvastatin (strength: 40 mg) at 40 mg once daily by mouth for hyperlipidemia taking for a year. The patient experienced positive covid-19 antigen test with symptoms (ache, cough, fever) from 19Dec2020. Event details: The patient received the COVID 19 Vaccine on 17Dec2020 10:30AM in the left arm. Tested for COVID 19 with the antigen test, on 20Dec2020 and his result was positive, he experienced ache and cough on 19Dec2020. Clarified he started having symptoms in the evening (19Dec2020) and then tested in the morning (20Dec2020). He experienced the low grade fever on 20Dec2020. His maximum temperature was 100.4 fahrenheit. He had only been treated with over the counter products. No further information provided for the over the counter products. He was not hospitalized. He will take the second dose of the COVID 19 vaccine on 07Jan2021. The patient didn't have SARS-CoV2 antibodies at diagnosis. The patient was not admitted to an Intensive Care Unit. The patient didn't display clinical signs at rest indicative of severe systemic illness. The patient didn't require supplemental oxygen (including high flow or ECMO) or receive mechanical ventilation. The patient didn't have any pre-existing diseases worsened during the SARS-CoV2 infection. The patient was not treated with immunomodulating or immunosuppressing medications or received any other vaccines around the time of COVID-19 vaccination. The outcome of all his symptoms was resolving.; Sender's Comments: The reported events drug ineffective and COVID-19 are likely intercurrent and are unrelated to suspect drug BNT162B2 based on short temporal relation between vaccination and onset of events.</p>	Hyperlipidemia; Hypertension; Rhinitis allergic	ALLEGRA; ;

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920972-1	positive COVID-19 rapid test with symptoms; positive COVID-19 rapid test with symptoms; headache; nasal congestion; This is a spontaneous report from a contactable physician. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration, on an unspecified date at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced positive COVID-19 rapid test with symptoms, headache and nasal congestion on an unspecified date. The patient developed headache and nasal congestion by the third day after the vaccination. The patient underwent lab tests and procedures which included COVID-19 rapid test: positive on an unspecified date. The clinical outcome of positive COVID-19 rapid test with symptoms, headache and nasal congestion was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and has been requested during follow up.; Sender's Comments: The reported positive COVID-19 rapid test with symptoms after COVID-19 immunization is considered ineffective of BNT162B2, and the Company cannot completely exclude the possible causality between the reported event and BNT162B2 administration.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920973-1	positive COVID-19 test with symptoms; positive COVID-19 test with symptoms; This is a spontaneous report from a contactable nurse (patient). A 37-year-old female patient received their first dose of BNT162B2 (lot number: EL0140; expiry date unknown), intramuscular on 21Dec2020 at single dose for COVID-19 immunization. Medical history included congestion and dry cough (before vaccination), and not tasting anything from an unknown date. Concomitant medication included vitamins. The patient reported that they just have the concern about the vaccination last Monday that was 21Dec2020, on 25Dec2020, Christmas day they were diagnosed with Covid. They were thinking because the day before their vaccination they already had like some kind of congestion and also some kind of dry cough but they didn't really think that it was Covid but they were still able to get the vaccination on Monday. When they started to feel like they were not tasting anything, that's when they decided to get tested and it turns out to be positive. They were confirmed positive on the 25th but in their mind they were probably having Covid since the day before they got their vaccination. So their worry is, is there any effect where they got the vaccine where they already have the Covid in their body. So that is really their worry right now. The patient underwent lab tests and procedures which included SARS-CoV-2 test: positive on 25Dec2020. The outcome of the events was unknown.; Sender's Comments: The association between the event drug ineffective (COVID-19) with BNT162b2 can not be completely excluded.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920974-1	developed rashes on the chest area, not spreading; This is a spontaneous report from a contactable nurse (patient). A 43-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot number EK5730), via an unspecified route of administration into the left deltoid on 18Dec2020 as the first single dose for covid-19 immunization. Medical history was reported as none. Concomitant medication included rosuvastatin calcium (CRESTOR). The patient developed rashes on the chest area, not spreading on 22Dec2020. The event as reported between not serious and medically significant by the reporter. Details were as follows: and patient was a nurse that had her vaccine through her workplace on 18Dec2020, so she was 10 days out, and noticed a rash on her chest on day 4, which was still present. It did not seem to be spreading, and she could not think of any reason for the reaction. She was scheduled to receive the second dose in three weeks. The outcome of developed rashes on the chest area, not spreading was not recovered. The relatedness of the event to the suspect drug was reported as unknown from the reporter.; Sender's Comments: Based on the information currently provided, the vaccination with BNT162B2 might play a contributory role in triggering the onset of rash. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	CRESTOR
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920975-1	blurred vision; little spots on the inside of her eyelids; This is a spontaneous report from a contactable nurse (patient). A 53-year-old female patient received first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine; batch/lot number and expiry date were unknown), via an unspecified route of administration on 18Dec2020 at a single dose for COVID-19 immunization. Medical history included eyeglasses wearer (reported as with her glasses). The patient's concomitant medications were not reported. The patient is experiencing symptoms from the COVID-19 vaccine received on 18Dec2020. She began to have blurred vision that night, and it worsened over the following weekend. She saw the eye doctor on 22Dec2020, and they stated her vision had changed even with her glasses. Now she has little spots on the inside of her eyelids that were also noticed on the eye examination in Dec2020. She has already reported these symptoms to the V-safe program. She mentioned that she is not the only nurse in the workplace that has experienced blurry vision. She asked if she should receive the second dose on 08Jan2021. It was still blurry, but it was better than it was a week ago. It still affected her reading and seeing at a distance. It scared her to get the second one because she doesn't want to go blind. She went to the eye doctor for visit on Tuesday. The outcome of the event blurred vision was recovering, while for the other event was unknown. The reporter considered blurred vision as serious due to being medically significant. Information about lot/batch number has been requested.; Sender's Comments: There is not a reasonable possibility that the reported event vision blurred and eyelid disorder related to the suspect product event most likely due to patient underlying contributory factors	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920979-1	having symptoms/She tested positive to COVID-19; having symptoms/She tested positive to COVID-19; This is a spontaneous report from a contactable nurse (patient). A 30-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 16Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient started having symptoms on Thursday. On Friday, her supervisor had her get tested for COVID. She tested positive to COVID-19 in Dec2020. Outcome of the events was unknown. The patient wanted to know if she is symptom free, should/can she still get the 2nd dose as planned. Information on the lot/batch number has been requested.; Sender's Comments: Based on the information available, a possible contributory role of the suspect products cannot be excluded for the reported event of positive for corona virus infection for the lack of efficacy of the vaccine. However, based on the mechanism of action of the vaccine, it is unlikely the patient would have fully developed immunity for the vaccine to be effective, due to the single dose and short duration	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920981-1	ended up testing positive for COVID virus after receiving the first dose of Pfizer-BioNTech COVID-19 Vaccine/ She had symptoms; ended up testing positive for COVID virus after receiving the first dose of Pfizer-BioNTech COVID-19 Vaccine/ She had symptoms; This is a spontaneous report from a contactable nurse. This nurse reported similar events for two patients. This is 1st of two reports. A female patient of an unspecified age received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899; expiry date unknown), via an unspecified route of administration, on an unspecified date, at 0.3 mL, single for COVID-19 vaccination. The patient's medical history and concomitant medications were not reported. The nurse reported on an unspecified date that the patient tested positive after the first dose. The reporter works in employee health at their hospital. The employee ended up testing positive for COVID virus after receiving the first dose of Pfizer-BioNTech COVID-19 Vaccine. She had symptoms the first 2-3 days after getting the vaccine and assumed it was a normal immune response, but after that she continued to have the symptoms. They went to see the provider and tested positive for COVID virus. They were asking how to handle their second doses. Outcome of the events was unknown.; Sender's Comments: Based on the information available, a possible contributory role of the suspect products cannot be excluded for the reported event of corona virus infection for the lack of efficacy of the vaccine. However, based on the mechanism of action of the vaccine, it is unlikely the patient would have fully developed immunity for the vaccine to be effective, due to the short duration of less than 5 days since the vaccine first dose is given.,Linked Report(s) : US-PFIZER INC-2020516628 same reporter, same drug, same event, different patient.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920985-1	a patient received Pfizer COVID-19 vaccine, couple of days later the patient tested positive for COVID-19; a patient received Pfizer COVID-19 vaccine, couple of days later the patient tested positive for COVID-19; This is a spontaneous report from a contactable pharmacist. A patient of unspecified age and gender received the first dose of BNT162B2 (Pfizer-Biontech Covid-19 Vaccine) via an unspecified route of administration on an unspecified date at a single dose as Pfizer COVID-19 vaccine. Medical history and concomitant medications were not reported. It was reported that on an unspecified date, a patient received Pfizer COVID-19 vaccine, couple of days later the patient tested positive for COVID-19, patient subsequently received monoclonal antibody treatment: a combination of Casirivimab and Imdevimab. It was inquired if the patient could receive the second dose of COVID-19 vaccine. The outcome of the events was unknown. Information about Lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of BNT162B2 vaccine cannot be excluded for the reported events of LOE and COVID 19. There is very limited information provided in this report. This case will be reassessed upon receipt of follow-up information. Based on the information provided in the case, this individual report would not seem to modify the risk-benefit profile of the subject product.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920986-1	I took the vaccine and two days after I tested positive/had lost my sense of smell and taste; I took the vaccine and two days after I tested positive/had lost my sense of smell and taste; Lost my sense of smell and taste; Lost my sense of smell and taste; This is a spontaneous report from a non-contactable consumer (patient). A patient of unspecified age and gender received BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine; lot/batch number and expiry date were unknown), via an unspecified route of administration on 23Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The consumer stated that he/she just got the vaccine on Wednesday (23Dec2020), and he/she started experiencing some symptoms on 24Dec2020 where he/she had lost his/her sense of smell and taste. On 25Dec2020, he/she went 'back' to get tested, and he/she tested positive. The consumer is asking whether this has been reported that one of the side effects of getting the vaccine. The consumer said he/she hasn't read anything about loss of taste and smell after taking the vaccine. He/she was wondering if this has been reported or this is one of those small side effects that the vaccine has. The consumer further stated that he/she took the vaccine and two days after, he/she tested positive. Now, his/her whole family is also positive but only his/herself had the vaccine, because he/she is the only one that works in healthcare (further clarification was unknown, hence reporter was captured as consumer). The outcome of the events was unknown. No follow-up attempts are possible; Information about lot/batch number could not be obtained. No further information is expected.; Sender's Comments: The association between the event lack of effect (COVID19, lost of taste and smell) with BNT162b2 can not completely excluded.	No current illness for this event.	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920987-1	ended up testing positive for COVID virus after receiving the first dose of Pfizer-BioNTech COVID-19 Vaccine/had symptoms; ended up testing positive for COVID virus after receiving the first dose of Pfizer-BioNTech COVID-19 Vaccine/had symptoms; This is a spontaneous report from a contactable nurse. This nurse reported similar events for two patients. This is the 2nd of two reports. A patient of an unspecified age and gender received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, strength: 0.3 mL, lot number: EH9899; expiry date was unknown), via an unspecified route of administration on an unspecified date at 0.3 mL, single for COVID-19 vaccination. The patient's medical history and concomitant medications were not reported. The patient ended up testing positive for COVID virus after receiving the first dose of Pfizer-BioNTech COVID-19 Vaccine. The patient had symptoms the first 2-3 days after getting the vaccine and assumed it was a normal immune response, but after that the patient continued to have the symptoms. The patient went to see the provider and tested positive for COVID virus. The patient was asking how to handle his/her second dose. The outcome of the event was unknown.; Sender's Comments: Based on the information currently provided, the company considers that a causal relationship between the COVID-19 and vaccination with BNT162B2 cannot be excluded.,Linked Report(s) : US-PFIZER INC-2020516297 same reporter, same event, different patient.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920989-1	tested positive after receiving Covid-19 vaccine; tested positive after receiving Covid-19 vaccine; This is a spontaneous report from a contactable nurse. A 38-years-old female patient started received her first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date not reported), via an unspecified route of administration on 18Dec2020 at a single dose for prevention of Covid 19. The patient medical history and concomitant medications were not reported. The nurse reported that a staff member received the first dose of Covid-19 vaccine on 18Dec2020. Approximately 9 days later, on 27Dec2020, the patient developed/experienced tested positive after receiving Covid-19 vaccine. The seriousness criteria for this event was none. The nurse asked if the patient will be able to receive the second dose and what is the advice for the patient. The outcome of the event was unknown. The reporter considered the relationship of the event to treatment with BNT162B2 as not applicable. Information about lot/batch number was requested.; Sender's Comments: Based on the information available, a possible contributory role of the suspect BNT162B2 cannot be excluded for the reported event tested positive Covid-19 based on the known safety profile. However the short duration of 9 days since the vaccine first dose is given it is unlikely patient would have fully developed immunity.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	920996-1	Droopy left cheek.; This is a spontaneous report from a contactable nurse. A 52-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number: EJ1685), intramuscularly in the left arm, on 17Dec2020 at 14:30 (at the age of 52-years-old) at a single dose for COVID-19 immunization. The patient had no medical history or concomitant medications. The patient had no other medications within two weeks of vaccination. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient previously took sulfamethoxazole, trimethoprim (SEPTRA) and experienced allergy. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient experienced droopy left cheek on 21Dec2020. No therapeutic measures were taken as a result of the event. The clinical outcome of droopy left cheek was recovered in Dec2020. It was also reported that since the vaccination, the patient had not been tested for COVID-19.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of droopy left cheek might not be excluded considering the plausible temporal relationship. The patient had previous allergy reaction to antibiotic (sulfamethoxazole, trimethoprim) use. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	921000-1	patient tested positive for COVID; patient tested positive for COVID; This is a spontaneous report from a contactable physician from a Pfizer-sponsored program Pfizer First Connect. A 29-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number: UNKNOWN), via an unspecified route of administration on 17Dec2020 as a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On 27Dec2020, the patient tested positive for COVID. The clinical outcome of patient tested positive for COVID was unknown. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.; Sender's Comments: The efficacy of a drug varies from one patient to another and can be affected by different factors; however, a contributory role of the suspect drug BNT162B2 to the reported events Drug ineffective and COVID 19 cannot be ruled out.	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	921003-1	"she was administered the first dose of Pfizer COVID-19 Vaccine and later got COVID-19; she was administered the first dose of Pfizer COVID-19 Vaccine and later got COVID-19; This is a spontaneous report from a Pfizer-sponsored program Pfizer First Connect. A contactable female physician (patient) of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date not reported), via an unspecified route of administration from an unspecified date in 2020 at a single dose for Covid-19 immunization. The patient medical history and concomitant medications were not reported. On an unspecified date in 2020, the patient got the first shot of COVID vaccine and got COVID, she was wondering if she should still get the dose scheduled for 04Jan2021. The patient clarified that she is both a medical doctor/physician as well as the patient. She clarified that she was administered the first dose of Pfizer COVID-19 Vaccine and later got COVID-19. She called to ask if she should still get the second dose of COVID-19 Vaccine which is scheduled for 04Jan2021. She clarified that she does not think anything went wrong with the COVID-19 Vaccine. She does not think her receiving the COVID-19 Vaccine and developing COVID-19 are related; there was no way she would have had time to develop any protection from the COVID-19 Vaccine at the time she was exposed to COVID-19 2 days later. She does not think she can provide any relevant medical information that would be helpful for this report and declined to continue report. The outcome of the event was unknown. Information on the lot/batch number has been requested.; Sender's Comments: The reported "developing COVID-19" after COVID-19 immunization is considered ineffective of BNT162B2, and the Company cannot completely exclude the possible causality between the reported event and BNT162B2 administration."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	921005-1	"She tested positive for COVID-19; She tested positive for COVID-19; This is a spontaneous report from a contactable healthcare professional (patient) via Pfizer sales representative. A 55-years-old female patient received her first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date not reported), via an unspecified route of administration on 22Dec2020 at a single dose for Covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient, who is a frontline medical worker, informed that she tested positive for COVID-19 today (28Dec2020). The patient stated that she was informed by her employee health division at (place) that she was exposed to a patient with COVID-19 prior to her vaccination. She asked to be contacted regarding the timing of her second dose in light of her current status. The outcome of the event was unknown. Information on the lot/batch number has been requested.; Sender's Comments: There is not a reasonable possibility that reported "tested positive for COVID-19" is related to BNT162B2 vaccine. The patient exposed to a patient with COVID-19 before vaccination."	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	921006-1	Not feeling well; chills; muscle aches; headache; ears bothering; stuffy/runny nose; stuffy/runny nose; This is a spontaneous report from a non-contactable nurse (patient). A 43-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number: EL0140), intramuscularly in the right arm, on 18Dec2020 at 0600 (at the age of 43-years-old) at a single dose for COVID-19 immunization. Medical history included hypothyroid, breast cancer, and penicillin allergy. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. Concomitant medications, taken within two weeks of vaccination, included levothyroxine (MANUFACTURER UNKNOWN) and tamoxifen (MANUFACTURER UNKNOWN). Other concomitant medications included unspecified multivitamin. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient experienced not feeling well, chills, muscle aches, headache, ears bothering, and stuffy/runny nose on 25Dec2020 at 20:00. The events were reported as non-serious. No therapeutic measures were taken as a result of the events. The clinical outcome of not feeling well, chills, muscle aches, headache, ears bothering, and stuffy/runny nose was unknown. It was also reported that since the vaccination, the patient had not been tested for COVID-19. No follow-up attempts are possible. No further information is expected.	No current illness for this event.	;
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	921023-1	tested positive for COVID-19; tested positive for COVID-19; This is a spontaneous report from a contactable nurse (patient). A 39-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 17Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient is a nurse anesthetist that got Covid vaccine on 17Dec2020 and tested positive for COVID-19 after the vaccine on 26Dec2020. The patient was wondering if have seen this. Stated that she was signed up for the booster scheduled for 05Jan2021 and wanted to know if they had any information about taking this. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: The efficacy of a drug varies from one patient to another and can be affected by different factors; however, a contributory role of the suspect drug bnt162b2 to the reported events drug ineffective and COVID-19 cannot be ruled out.	No current illness for this event.	No other medications for this event.

Vaccine	Serious	Days In Hospital	Event Category	VAERS ID	Adverse Event Description	Current Illness	Medications At Time Of Vaccination
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	921058-1	<p>huge welt on her arm; This is a spontaneous report from a contactable nurse (patient). A female patient of an unspecified age received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on an unspecified date at a single dose for covid-19 immunization. Medical history included covid-19 from end of Oct2020 to an unknown date. The patient's concomitant medications were not reported. The patient reported that she is an nurse in the ICU. She had received the 1st dose of the vaccine after she had covid the end of Oct2020. Her reaction to the vaccine was, she felt exactly how she did when she had covid. It lasted 3 days. She had a huge welt on her arm. Her pulmonologist suggested that she contact Pfizer for advice on if or when she should receive the 2nd dose, which is currently due 08Jan2021. Outcome of the event huge welt was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported event of giant urticaria due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p>	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	921064-1	<p>extremely lightheaded; This is a spontaneous report from a contactable physician (patient's husband). The physician reported same events for 2 patients. This is 2nd of 2 reports. A 74-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL0140), via an unspecified route of administration on 30Dec2020 at a single dose in deltoid left for Vaccination/COVID-19 vaccine. Medical history included COVID-19 in Jul2020, ongoing overweight. There were no concomitant medications. The patient experienced extremely lightheaded on 30Dec2020. Reporter seriousness for extremely lightheaded is medically significant. The reporter stated his wife (patient) was feeling about the same thing and believed his wife was feeling better. She got up and was walking around and is no longer beside him. No Emergency Room or Physician Office visited. The outcome of event was recovering.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the event dizziness cannot be excluded. „Linked Report(s) : US-PFIZER INC- 2020520760 same reporter/drug/event, different patient</p>	Overweight	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	921335-1	<p>potential person infected with Sars-Cov-2 following the administration of the first dose of vaccine and was isolated during the timing of the second dose; potential person infected with Sars-Cov-2 following the administration of the first dose of vaccine and was isolated during the timing of the second dose; This is a spontaneous report from a contactable Pharmacist. A female patient of unspecified age received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The relevant medical history and concomitant medications were not reported. The pharmacist was questioning as to guidelines to the potential person infected with Sars-Cov-2 following the administration of the first dose of vaccine and was isolated during the timing of the second dose. The outcome of the event was unknown. Information on the Batch/Lot number has been requested.; Sender's Comments: The reported potential person infected with Sars-Cov-2 following the administration of the first dose of vaccine is considered ineffective of BNT162B2, and the Company cannot completely exclude the possible causality between the reported event and BNT162B2 administration.</p>	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	921359-1	<p>Migraines for several days, nausea on day three; nausea; This is a spontaneous report from a contactable other healthcare professional, the patient. A 51-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, Lot number: EL0140), via intramuscular route of administration in the left arm on 18Dec2020 at 09:00 (at the age of 51-years-old) as a single dose for COVID-19 vaccination. Medical history included fibromyalgia and history of migraines. The patient did not have any known allergies to medications, food, or other products. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient's concomitant medications were not reported; however, there were other medications the patient received within 2 weeks of the vaccination. The patient had not received any other vaccine within 4 weeks prior to the vaccine. On 21Dec2020 at 13:00 the patient experienced migraines for several days, nausea on day three. The patient did not receive any treatment for the events. The clinical outcome of the migraines for several days, nausea on day three was recovering. It was also reported that since the vaccination, the patient had not been tested for COVID-19.</p>	Fibromyalgia; Migraine	No other medications for this event.

COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	921366-1	Felt sore throat and tachycardia; Felt sore throat and tachycardia; COVID test came back positive; COVID test came back positive; This is a spontaneous report from a contactable physician, the patient. A male patient of an unspecified age received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), via an unspecified route of administration on 18Dec2020, as a single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. It was unknown whether the patient received any other vaccine within 4 weeks prior to the vaccine. On 28Dec2020, the patient felt sore throat and tachycardia. The patient also reported that on an unspecified date, in Dec2020, the COVID test came back positive (the Sepheid test, not the rapid test). The events were reported as non-serious. The patient underwent lab tests, which included COVID-19 test: positive on an unspecified date in Dec2020. It was unknown if the patient received treatment for the COVID test came back positive, felt sore throat and tachycardia. The clinical outcome of the events the COVID test came back positive, felt sore throat and tachycardia was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up. Sender's Comments: Based on available information, a possible contributory role of subject vaccine cannot be excluded for the reported events of LOE, COVID 19, Oropharyngeal pain and tachycardia, based on temporal relationship. There is very limited information provided in this report. This case will be reassessed upon receipt of follow-up information.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	921387-1	positive for covid; positive for covid; positive for covid; This is a spontaneous report from a contactable nurse (patient). A 43-year-old female patient received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at a single dose for COVID-19 immunization, completely excluded. More information such as laboratory findings on nucleic acid /PCR test needed for meaningful medical assessment. The patient's medical history and concomitant medications were not reported. The patient tested positive for COVID on 20Dec2020. Outcome of the events was unknown. Information on the lot/batch number has been requested. Sender's Comments: Based on the information currently available, a lack of efficacy with the suspected vaccine BNT162B2 in this patient cannot be completely excluded. More information such as virus genome /nucleic acid detection needed for meaningful medical assessment	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	921413-1	positive for covid; positive for covid; positive for covid; This is a spontaneous report from a contactable consumer. A 58-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date were not reported), via an unspecified route of administration on an unspecified date at a single dose for COVID-19 vaccination. The patient's medical history and concomitant medications were not reported. The patient got the vaccine and found out that she was positive for covid. The outcome of the event was unknown. Information on the Lot/Batch number has been requested	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (PFIZER-BIONTECH)) (1200)	No	None	None of the above	921416-1	Swelling arm/ swelling down to their biceps after receiving the COVID-19 Vaccine; arm soreness/ soreness in their arms after receiving the COVID-19 Vaccine; light redness around the vaccine injection site; body felt cold; felt real tired right after; fell asleep quickly; This is a spontaneous report from a contactable consumer. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 28Dec2020 13:00 at SINGLE DOSE for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. It was reported the patient got the COVID-19 Vaccine at the same time as her husband did, and she had some symptoms afterwards, but her symptoms went right away. It was reported both she and her husband had soreness in their arms after receiving the COVID-19 Vaccine. She said a micro needle was used when the COVID-19 Vaccine was administered to both her and her husband's left upper arms. It was also reported both her and her husband had swelling down to their biceps after receiving the COVID-19 Vaccine. She said the swelling went away on both of their left arms after 12-14 hours. It was also reported the husband and his wife continuously monitored each others vaccine injection sites. She said the husband used a LED light to look at her left upper arm, and saw a light redness around her vaccine injection site. The husband said the light redness around the vaccine injection site went away in 2 hours after receiving the COVID-19 Vaccine. It was reported her body felt cold after receiving the COVID-19 Vaccine on 28Dec2020, and that she felt real tired right after she noticed her body felt cold. The husband said his wife fell asleep quickly on 28Dec2020, which is not normal for her, and slept for awhile. The husband said after she woke up she was fine. It was reported their arm swelling and soreness didn't really effect either one of them right away. He said the vaccine injection site redness for his wife started about 45minutes to an hour after she received the COVID-19 Vaccine. He said they both started to feel the soreness in their left arms later. He said he could feel the soreness at the vaccine injection site when he moved his left arm. He said it was the same for his wife when she moved her left arm, clarifying it was a very subtle feeling of soreness. The outcome of the events was recovered. Lot/Batch has been requested.	No current illness for this event.	No other medications for this event.
COVID19 (COVID19 (UNKNOWN)) (1202)	No	None	Emergency Room *	909978-1	When I woke up at 0800AM, noticed with rashes on my back about 25%. I took Loratadine but not relieved. Went to ER at 05:00PM and they give Benadryl IV. Prednisone 60 mg tab & Pepcid 20 mg tab. After 2 Hours rashes resolved. Noticed with rashes also on both legs and abdomen when I was in the ER.	NIL	VALSARTAN, LEVOTHYROXINE, CALTRATE, FISH OIL
COVID19 (COVID19 (UNKNOWN)) (1202)	No	None	Office Visit *	909978-1	When I woke up at 0800AM, noticed with rashes on my back about 25%. I took Loratadine but not relieved. Went to ER at 05:00PM and they give Benadryl IV. Prednisone 60 mg tab & Pepcid 20 mg tab. After 2 Hours rashes resolved. Noticed with rashes also on both legs and abdomen when I was in the ER.	NIL	VALSARTAN, LEVOTHYROXINE, CALTRATE, FISH OIL

Note: Submitting a report to VAERS does not mean that healthcare personnel or the vaccine caused or contributed to the adverse event (possible side effect).

* These values are only available from VAERS 2.0 Report Form, active 06/30/2017 to present.

** These value are only available from VAERS-1 Report Form, active 07/01/1990 to 06/29/2017.

Notes:

Caveats: VAERS accepts reports of adverse events and reactions that occur following vaccination. Healthcare providers, vaccine manufacturers, and the public can submit reports to VAERS. While very important in monitoring vaccine safety, VAERS reports alone cannot be used to determine if a vaccine caused or contributed to an adverse event or illness. The reports may contain information that is incomplete, inaccurate, coincidental, or unverifiable. Most reports to VAERS are voluntary, which means they are subject to biases. This creates specific limitations on how the data can be used scientifically. Data from VAERS reports should always be interpreted with these limitations in mind.

The strengths of VAERS are that it is national in scope and can quickly provide an early warning of a safety problem with a vaccine. As part of CDC and FDA's multi-system approach to post-licensure vaccine safety monitoring, VAERS is designed to rapidly detect unusual or unexpected patterns of adverse events, also known as "safety signals." If a safety signal is found in VAERS, further studies can be done in safety systems such as the CDC's Vaccine Safety Datalink (VSD) or the Clinical Immunization Safety Assessment (CISA) project. These systems do not have the same limitations as VAERS, and can better assess health risks and possible connections between adverse events and a vaccine.

Key considerations and limitations of VAERS data:

- Vaccine providers are encouraged to report any clinically significant health problem following vaccination to VAERS, whether or not they believe the vaccine was the cause.
- Reports may include incomplete, inaccurate, coincidental and unverified information.
- The number of reports alone cannot be interpreted or used to reach conclusions about the existence, severity, frequency, or rates of problems associated with vaccines.
- VAERS data are limited to vaccine adverse event reports received between 1990 and the most recent date for which data are available.
- VAERS data do not represent all known safety information for a vaccine and should be interpreted in the context of other scientific information.

Some items may have more than 1 occurrence in any single event report, such as Symptoms, Vaccine Products, Manufacturers, and Event Categories. If data are grouped by any of these items, then the number in the Events Reported column may exceed the total number of unique events. If percentages are shown, then the associated percentage of total unique event reports will exceed 100% in such cases. For example, the number of Symptoms mentioned is likely to exceed the number of events reported, because many reports include more than 1 Symptom. When more than 1 Symptom occurs in a single report, then the percentage of Symptoms to unique events is more than 100%. [More information.](#) ([/wonder/help/vaers.html#Suppress](#))

Data contains VAERS reports processed as of the previous Friday. The VAERS data in WONDER are updated weekly, yet the VAERS system receives continuous updates including revisions and new reports for preceding time periods. [More information.](#) ([/wonder/help/vaers.html#Reporting](#))

Under Title 21, Code of Federal Regulations Section 600.80 ([/wonder/help/vaers/21CFR600-80.htm](#)), a serious event is defined with any of the following outcomes: Death, a life-threatening adverse experience, inpatient hospitalization or prolongation of existing hospitalization, a persistent or significant disability/incapacity, or a congenital anomaly/birth defect.

Values of Event Category field vary in their availability over time due to changes in the reporting form. The "Emergency Room/Office Visit" value was available only for events reported using the VAERS-1 form, active 07/01/1990 to 06/29/2017. The "Congenital Anomaly/Birth Defect", "Emergency Room", and "Office Visit" values are available only for events reported using the VAERS 2.0 form, active 06/30/2017 to present. These changes must be considered when evaluating count of events for these categories.
